

Massachusetts Department of Conservation and Recreation
Division of Water Supply Protection, Office of Watershed Management
Forest Management Project Summary

Project Title:

DWSP Harvest Permit Number: 1045
DCR Forest Cutting Plan File Number: 124-7622-15

Site Information

Watershed: Quabbin	Town(s): Hardwick
Acres: 46	Nearest Road: Mellon Road
Natural Heritage Atlas overlap?: Yes	Public Drinking Water Supply Watershed?: No
Forest Types: white pine-oak	ACEC?: No
Soils: Woodbridge-Paxton and Charlton-Paxton associations, extremely stony	
Wetland Resources: Muddy Brook runs parallel to the harvest area on the east side.	
Vernal Pools: None	

Harvest Information

Harvest Start Date: June 25, 2015 or later	Harvest End Date: June 30, 2017
Number of Wetland Crossings: None	Number of Stream Crossings: None

Best Management Practices Applied

Stream Crossings	There are no stream crossings.
Filter Strips	Variable width filter strip along Muddy Brook; no harvesting within 50 feet of Brook.
Wetland Crossings	There are no wetland crossings.
Harvesting in Wetlands	There is no harvesting in wetlands.

DWSP Forester supervising this harvest

Name: Helen Johnson
Forester License #: 383
Phone #: 978-544-6343
Email: Helen.Johnson@state.ma.us

NARRATIVES

General Description/Forest Composition/History:

The area to be harvested is in the town of Hardwick, and is bounded by Greenwich Road to the south and Mellon Road to the west. Muddy Brook runs parallel to the east boundary of the lot, about 100 feet away. Another harvest is planned for the area immediately to the north up to Fleming Road, also bounded by Mellon Road to the west and Muddy Brook to the east.

The stone walls on this lot attest to its history of clearing for agriculture, mostly for pasture. When the farmland was abandoned, probably in the late 19th or early 20th century, it reverted to forest. This lot was part of a privately owned parcel that was given to the Nature Conservancy in 1978, which then donated it to DCR (then called the Metropolitan District Commission) in 1980.

The primary tree species are white pine and mixed oaks, particularly red oak. Other hardwoods include black and paper birch, red maple, poplar, ash, and hickory. Hemlock occurs in small groves, particularly near Mellon Road. A harvest in 1990 resulted in extensive regeneration, some of which was damaged and/or partially released by recent winter storms.

The soils on this lot are primarily Woodbridge-Paxton and Charlton-Paxton associations, extremely stony. These are glacial till soils derived from granite and gneiss, composed mostly of fine sandy loams. They range from moderately well drained (Woodbridge) to well drained (Charlton and Paxton). There is some exposed bedrock at the high points.

Site Selection:

The primary goal of this harvest is to create and maintain a forest that is resilient to and can quickly recover from small and large scale disturbances such as diseases, insect infestations, ice storms and hurricanes, all of which are becoming increasingly common. The ideal way to achieve this is to have a diversity of species in various stages of development (seedlings through large legacy trees) that are actively growing and regenerating.

On this parcel the work of diversifying the forest was begun in 1990. The current harvest will build on the success the earlier harvest by continuing the process of establishing new tree seedlings and providing space for existing regeneration to expand and grow. The full diversity of native species is being maintained and promoted in all age classes. This combination of structural and species diversity builds resistance and resilience into the forest.

Silvicultural Objectives:

The main treatment at this time is the removal of the overstory in small groups, up to ½ acre in size, in order to foster regeneration. Groups were placed where there were clusters of trees that were declining or had weak stem form, often due to insects, diseases, or storm damage. These vulnerable trees will be replaced with vigorous new seedlings, or with saplings where there is existing regeneration to be released. In some places on the slope leading to the stream the areas between groups were

thinned to improve the vigor of the remaining overstory trees. Wherever possible wildlife habitat features were maintained and protected, such as snags (dead trees) and trees with cavities or raptors' nests.

Cultural Resources:

Stone walls are present along parts of Mellon Road, and there are a few walls in the interior of this lot. These walls are discontinuous, and thus can easily be avoided and protected during the upcoming harvest. This is in keeping with DWSP's standard practice, which dictates that every effort be made to keep existing stone walls intact. Otherwise, this area has been determined not to be culturally or archeologically sensitive based on a review by the DCR Archaeologist.

Wildlife/Rare or Endangered Species:

The easternmost portion of this lot is within a habitat "bubble" designated for protection by the Natural Heritage and Endangered Species Program (NHESP). In order to protect the species in this area, NHESP has determined that work within 50-300 feet of Muddy Brook will be limited to the period between November 1 and March 31. (The time window would be narrower for the area within 50 feet of the Brook, but that area will not be part of this harvest.)

The lot contains no other critical habitats or known rare or endangered species, and no vernal pools. Beavers have had a substantial impact on Muddy Brook, altering the hydrology and killing hardwoods on the banks. The uplands are home to a variety of wildlife including deer, turkey, coyote and moose.

Landowner Signature

The most important information on a cutting plan is the Landowner's objective, as this will determine which trees will be harvested and which will remain; **this decision will also determine the future condition of the forest for decades to come.** After having read the Massachusetts Forest Cutting Plan Information Sheet on page one, indicate your objective by checking the appropriate box below.

☒ **LT - Long-term Forest Management**

Planned management of the forest to achieve one or more of the following objectives: produce immediate and maximize long-term income, enhance wildlife habitat, improve recreational opportunities, protect soil and water quality, or produce forest specialty products.

☐ **ST - Short-term Harvest**

Harvest of trees with the main intention of producing short-term income with minimal consideration given to improving the future forest condition, which often results in a forest dominated by poor quality and low value species

I (we) have read the Massachusetts Cutting Plan Information Sheet, and am aware of my (our) management options.

I (we) hereby certify that I (we) have the legal authority to carry out the operation described above.

I (we) certify that I (we) have notified the Conservation Commission in the town in which the operation is to take place and the abutters of record within two hundred feet of the area to be harvested.

I (we) understand that the volumes and values (Ch61 only) in this plan have not been independently verified by the service forester upon approval and will report final values and volumes to the Director or his/her agent if the final figures differ from those reported.

Landowner DCR-DWSP Quabbin

Town Hardwick

File Number

Use this Section to provide further explanation or if Other (OT) was used in any category in the Best Management Practices Section on Page 3.

- Small group and single tree selection, with groups up to ½ acre.

- There will be no harvesting within 100 feet of the streams.

- Some roadside trees will be cut at the request of the Hardwick Tree Warden and Highway Department.

- Due to protected wood turtle habitat, harvesting within 300 foot of the streams will be limited to the winter. Exact dates and other details will be provided in a determination letter from NHESP.

BMPs

6

Use this Section to describe the types of trees to be harvested and/or retained if Other (OT) was used for "Designation of Trees" in the Stand Treatment Section on page 4.

Stand No.	Species to be Cut	Size of Trees to be Cut	Quality of Trees to be Cut	% BA/Acre Removed

Designation of Trees

Use this Section to describe how Chapter 132 requirements will be met if a non standard system (HG, DL, or OT) was used for the "Type of Cut" in the Cutting Standards Section on page 4.
