Thank you for taking the time to provide input on the EEA-DCS Model Conservation Restriction (CR Model). Over the years, the conservation community has requested revisions to the current CR Model, over time EEA-DCS has encountered natural edits to the current CR Model. Now, EEA-DCS will be reviewing and revising the CR Model.

To accomplish this, EEA-DCS has convened a Working Group, with a small number of individuals who are well-versed in the conservation community. EEA-DCS and the Working Group will ensure the CR Model remains legally sound, administratively clear, and aligned with statutory requirements, agency policy, and best practices.

In order to evaluate the revisions proposed EEA-DCS is conducting a survey to gather input from individuals, groups, and municipalities. Your feedback is valuable in helping EEA-DCS and the Working Group ensure that the CR Model reflects best practices and effectively serves proponents, holders, municipalities, and the public.

The survey can be found here: [EEA-DCS Conservation Restriction Model Template Survey 2026](#).

The survey is designed to gather suggestions for updates, revisions, or additions to the current CR Model. You may choose to provide your name, email address, and affiliation(optional) to help us follow up if clarification is needed. Please include any supporting documentation or resources that help explain or support your suggestions. The current CR Model is available here: [EEA-DCS Model Conservation Restriction \(May 2022\)](#).

The Working Group will review all responses received through this survey. While not all suggestions can be incorporated, every submission will be thoughtfully considered.

Important Notes:

- Please do **not** upload redlined versions of the CR Model, as we are unable to review them individually.
- If needed, multiple surveys may be submitted to ensure all feedback is captured.
