How do I determine Project Useful Life?

The project useful life is the estimated amount of time (in years) that the mitigation action will be effective. The Project Useful Life Summary Table located on the following page provides Standard Values and acceptable useful life limits for a variety of mitigation projects. If a value other than the Standard Value is used, documentation and justification are required.

Project Useful Life is important in calculating the net present value of future benefits, which represent the benefits in a Benefit-Cost Ratio (BCR).

Project Type Standard Value Acceptable (documentation required) Comment Acquisition / Relocation		Useful Life (years)		
Value (documentation required) Acquisition / Relocation (documentation required) All Structures 100 Elevation (scidential building Residential building 30 Non-Residential building 50 Public Building 50 Structural / Non-Structural Building Project (Residential Building Retrofit Residential Building Retrofit 25 Public Building Retrofit 50 Structural / Non-Structural Building Project (Reof hardening and roof clips Residential Building Retrofit 50 Structural / Non-Structural Major Equipment 50 Tornado Safe Room - Residential 30 30 30 Tornado Safe Room - Community 30 30 30 Retrofit or Small Community safe room 30 30 Non-Structural Major Equipment 15 15 15-30 Bilding Retrofit 50 Softractural Major Equipment 5 50 35-100 Concrete infrastructure (dams, levees)
