LIST OF SOURCES FOR INFOGRAPHIC

Service area maps	Blue dots represent ACO primary care practice site locations as of 1/1/2019.
	Shaded area represents service area as of 7/1/2019.
	Service areas are determined by MassHealth by member addresses, not practice locations.
	Service area zip codes and practice site locations were provided to the IA by MassHealth.
DSRIP Funding & Attributed Members	Funding and attribution were provided to the IA by MassHealth. DSRIP funding is the allocated non-at-risk start- up and ongoing funding for the year; it does not include any rollover, DSTI Glide Path or Flexible Services allocations.
	The number of members shown for 2017 was used solely for DSRIP funding calculation purposes, as member enrollment in ACOs did not begin until March 1, 2018.
Population Served	Paraphrased from the ACO's Full Participation Plan.
Implementation Highlights	Paraphrased from the required annual and semi-annual progress reports submitted by the ACO to MassHealth.

NOTES

Performance risk is defined as the risk of being unable to treat an illness cost-effectively (unable to control controllable costs). Insurance risk is defined as the risk that a patient will become sick or that a group of patients will have higher than estimated care needs.

INTRODUCTION

Centers for Medicare and Medicaid Services' (CMS') requirements for the MassHealth Section 1115 Demonstration specify that an independent assessment of progress of the Delivery System Reform Incentive Payment (DSRIP) Program must be conducted at the Demonstration midpoint. In satisfaction of this requirement, MassHealth has contracted with the Public Consulting Group to serve as the Independent Assessor (IA) and conduct the Midpoint Assessment (MPA). The IA used participation plans, annual and semi-annual reports, survey responses, and key informant interviews (KIIs) to assess progress of Accountable Care Organizations¹ (ACOs) towards the goals of DSRIP during the time period covered by the MPA, July 1, 2017 through December 31, 2019.

Progress was defined by the ACO actions listed in the detailed MassHealth DSRIP Logic Model (Appendix I), organized into a framework of six focus areas which are outlined below. This model was developed by MassHealth and the Independent Evaluator² (IE) to tie together the implementation steps and the short- and long-term outcomes and goals of the program. It was summarized into a high-level logic model which is described in the CMS approved Massachusetts 1115 MassHealth Demonstration Evaluation Design document (<u>https://www.mass.gov/doc/ma-independent-evaluation-design-1-31-19-0/download</u>).

The question addressed by this assessment is:

To what extent has the ACO taken organizational level actions, across six areas of focus, to transform care delivery under an accountable and integrated care model?

This report provides the results of the IA's assessment of the ACO that is the subject of this report. The ACO should carefully consider the recommendations provided by the IA, and MassHealth will encourage ACOs to take steps to implement the recommendations, where appropriate. Any action taken in response to the recommendations must comply with contractual requirements and programmatic guidance.

MPA FRAMEWORK

The ACO MPA findings cover six "focus areas" or aspects of health system transformation. These were derived from the DSRIP logic model (Appendix I), by grouping organizational level actions referenced in the logic model into the following domains:

- 1. Organizational Structure and Engagement
- 2. Integration of Systems and Processes
- 3. Workforce Development
- 4. Health Information Technology and Exchange
- 5. Care Coordination and Management
- 6. Population Health Management

Table 1 shows the ACO actions that correspond to each focus area. The ACO actions are broad enough to be accomplished in a variety of ways by different organizations, and the scope of the IA is to assess progress, not to determine the best approach for an ACO to take.

¹ For the purpose of this report, the term ACO refers to all ACO health plan options: Accountable Care Partnership Plans, Primary Care ACO plans, and the Managed Care Administered ACO plan. See the ACO Background section for a description of the ACO's organizational structure.

² The Independent Evaluator (IE) – a distinct role separate from the Independent Assessor - is responsible for evaluating the outcomes of the Demonstration.

The focus area framework was used to assess each entity's progress. A rating of "On track" indicates that the ACO has made appropriate progress in accomplishing the indicators for the focus area. Where gaps in progress were identified, the entity was rated "On track with limited recommendations" or, in the case of more substantial gaps, "Opportunity for improvement." See Methodology section for an explanation of the threshold setting process for the ratings.

Focus Area	ACO Actions
Organizational Structure and Governance	 ACOs established with specific governance, scope, scale, & leadership ACOs engage providers (primary care and specialty) in delivery system change through financial (e.g. shared savings) and non-financial levers (e.g. data reports)
Integration of Systems and Processes	 ACOs establish structures and processes to promote improved administrative coordination between organizations (e.g. enrollee assignment, engagement and outreach) ACOs establish structures and processes to promote improved clinical integration across organizations (e.g. administration of care management/coordination, recommendation for services) ACOs establish structures and processes for joint management of performance and quality, and conflict resolution Accountable Care Partnership Plans (Model A) transition more of the care management responsibilities to their ACO Partners over the course of the Demonstration
Workforce Development	 ACOs recruit, train, and/or re-train administrative and provider staff by leveraging Statewide Investments (SWIs) and other supports; education includes better understanding and utilization of behavioral health (BH) and long-term services and supports (LTSS)
Health Information Technology and Exchange	 ACOs develop Health Information Technology and Exchange (HIT/HIE) infrastructure and interoperability to support provision of population health management (e.g. reporting, data analytics) and data exchange within and outside the ACO (e.g. Community Partners/Community Service Agencies (CPs/CSAs), BH, LTSS, and specialty providers)
Care Coordination and Care Management	 ACOs develop systems and structures to coordinate services across the care continuum (i.e. medical, BH, LTSS, and social services), that align (i.e. are complementary) with services provided by other state agencies (e.g., Department of Mental Health (DMH))
Population Health Management	 ACOs develop capabilities and strategies for non-CP-related population health management approaches, which include risk stratification, needs screenings and assessments, and addressing the identified needs in the population via range of programs (e.g., disease management programs for chronic conditions, specific programs for co-occurring mental health (MH)/substance use disorder (SUD) conditions) ACOs develop structures and processes for integration of health-related social needs (HRSN) into their Population Health Management (PHM) strategy, including management of flexible services ACOs develop strategies to reduce total cost of care (TCOC; e.g. utilization management, referral management, non-CP complex care management programs, administrative cost reduction)

Table 1. Framework for Organizational Assessment of ACOs

METHODOLOGY

The IA employed a qualitative approach to assess ACO progress towards DSRIP goals, drawing on a variety of data sources to assess organizational performance in each focus area. The IA performed a desk review of participants' submitted reports and of MassHealth supplementary data, covering the period of July 1, 2017 through December 31, 2019. These included Full Participation Plans, annual and semiannual reports, budgets and budget narratives. In addition, the IA developed an ACO Practice Site Administrator survey ("the survey") to investigate the activities and perceptions of provider practices participating in ACOs. For ACOs with at least 30 practice sites, a random sample of 30 sites was drawn; for smaller ACOs, all sites were surveyed. Survey results were aggregated by ACO for the purpose of assessing each ACO. A supplementary source was the transcripts of KIIs of ACO leaders conducted jointly by the IA and the IE.

The need for a realistic threshold of expected progress, in the absence of any pre-established benchmark, led the IA to use a semi-empirical approach to define the state that should be considered "On track." As such, the IA's approach was to first investigate the progress of the full ACO cohort in order to calibrate expectations and define thresholds for assessment.

Guided by the focus areas, the IA performed a preliminary review of Full Participation Plans and annual and semi-annual reports. This horizontal review identified a broad range of activities and capabilities that fell within the focus areas, yielding specific operational examples of how ACOs can accomplish the logic model actions for each focus area. Once an inclusive list of specific items was compiled, the IA considered the prevalence of each item and its relevance to the focus area. A descriptive definition of On track performance for each focus area was developed from the items that had been adopted by a plurality of entities. Items that had been accomplished by only a small number of ACOs were considered to be promising practices, not expectations at midpoint. This calibrated the threshold for expected progress to the actual performance of the ACO cohort as a whole.

Qualitative coding of documents was used to aggregate the data for each ACO by focus area, and then coded excerpts and survey data were reviewed to assess whether and how each ACO had met the defined threshold for each focus area. The assessment was holistic and did not require that entities meet every item listed for a focus area. A finding of On track was made where the available evidence demonstrated that the entity had accomplished all or nearly all of the expected items, and no need for remediation was identified. When evidence from coded documents was lacking for a specific action, additional information was sought through a keyword search of KII transcripts. Prior to finalizing the findings for an entity, the team convened to confirm that thresholds had been applied consistently and that the reasoning was clearly articulated and documented.

See Appendix II for a more detailed description of the methodology.

ACO BACKGROUND³

Reliant Medical Group in partnership with Fallon Community Health Plan (FLN Reliant) is an Accountable Care Partnership Plan (ACPP), a "Model A" ACO, and is also known as Fallon 365 Care. An ACPP is a partnership between a single health plan and a provider-led ACO that receives monthly capitated payments from MassHealth based on enrollment and member risk scores, and takes on full insurance risk⁴ for the population.

³ Background information is summarized from the organization's Full Participation Plan.

⁴ Insurance risk is defined as the risk that a patient will become sick or that a group of patients will have higher than estimated care needs.

FLN provides a wide range of administrative functions including network management, member services, claims adjudication and compliance. FLN Reliant is one of three Model A ACOs for which FLN holds a contract with EOHHS

Reliant Medical Group is a multispecialty medical group with over 230 employed physicians across 20 sites in Worcester County. Reliant also operates five urgent care centers providing non-emergency medical services seven days a week including evening hours of operation.

FLN Reliant's service includes the Gardner-Fitchburg, Framingham, Southbridge, and Worcester service areas defined by MassHealth.

FLN Reliant's MassHealth member attribution and allocated non-at-risk DSRIP funding are summarized below.

Year	Members	DSRIP Funding
2017 (partial year, Jul-Dec)	28,694	\$3,277,300
2018	28,694	\$5,749,414
2019	30,286	\$4,773,670

Table 2. FLN Reliant MassHealth Members and DSRIP Funding 2017-2019⁵

The majority of FLN Reliant's members are In Worcester County, an area that is slightly less racially and ethnically diverse than the rest of the State, with approximately one in ten persons identifying as Hispanic/Latino, just under 5% identifying as Asian, and approximately 4% identifying as African American. English is the primary language spoken by the majority of the population followed by Spanish. Worcester County varies widely in terms of other salient characteristics such as household income, educational attainment and prevalent health conditions.

SUMMARY OF FINDINGS

The IA finds that FLN Reliant is On track or On track with limited recommendations in six of six focus areas.

Focus Area	IA Findings
Organizational Structure and Engagement	On track with limited recommendations
Integration of Systems and Processes	On track
Workforce Development	On track
Health Information Technology and Exchange	On track
Care Coordination and Care Management	On track with limited recommendations
Population Health Management	On track

FOCUS AREA LEVEL PROGRESS

The following section outlines the ACO's progress across the six focus areas. Each section begins with a description of the established ACO actions associated with an On track assessment. This description is followed by a detailed summary of the ACO's results across all indicators associated with the focus area.

⁵ Funding and attribution were provided to the IA by MassHealth. DSRIP funding is the allocated non-at risk funding for the year; it does not include any rollover, DSTI Glide Path or Flexible Services allocations.

This discussion includes specific examples of progress against the ACO's participation plan as well as achievements or promising practices, and recommendations were applicable. The ACO should carefully consider the recommendations provided by the IA, and MassHealth will encourage ACOs to take steps to implement the recommendations, where appropriate. Any action taken in response to the recommendations must be taken in accordance with program guidance and contractual requirements.

1. ORGANIZATIONAL STRUCTURE AND ENGAGEMENT

On Track Description

Characteristics of ACOs considered On track:

- ✓ Established governance structures
 - includes representation of providers and members, and a specific consumer advocate, on executive board;
 - receives and incorporates, through the executive board, regular input from the population health management team, and the Consumer Advisory Board/Patient Family Advisory Committee;
 - has a clear structure for the functions and committees reporting to the board, typically including quality management, performance oversight, and contracts/finance.

✓ Provider engagement in delivery system change

- has established processes for joint management of quality and performance, including regular performance reporting to share quality and performance data, on-going performance review meetings where providers and ACO discuss areas for improvement of performance, and education and training for staff where applicable;
- communicates a clearly articulated performance management strategy, including goals and metrics, to practice sites, but also grants sites some autonomy on how to meet those goals, and uses feedback from providers and sites in ACO-wide continuous improvement for quality and performance.

Results

The IA finds that FLN Reliant is **On track with limited recommendations** in the Organizational Structure and Engagement focus area.

Established governance structures

The ACPP has established appropriate governance structures. The ACO's Joint Governance Committee (JGC) oversees and directs all operations and includes representatives from Fallon, Reliant, and a consumer advocate who is also a representative from a Community Partner (CP). The JGC represents the highest level of the organization's governance which, among other things, sets the overall value-based purchasing strategy.

A Joint Operating Committee (JOC) regularly reports to the JGC. Overall population health management (PHM) strategy is determined by the JOC and its two subcommittees, Clinical Affairs and Integrated Care. These subcommittees have joint decision-making authority, equally shared by Fallon and Reliant Medical Group. Membership of the JOC is represented equally between Fallon and Reliant.

FLN Reliant governance structure also includes a Patient and Family Advisory Council (PFAC).

Provider engagement in delivery system change

Providers from across the ACO are involved in quality and performance management oversight activities through representation on the JGC. Nine out of the thirteen members of the JGC are ACO provider representatives.

The ACO reports that its Quality Committee produces performance reports at a Divisional level, an organizational unit that appears to predate the Medicaid ACO inside of Fallon. Divisional level performance reports are sent out from the ACO to identify performance improvement opportunities. Fallon also reports using its Service Quality Committee as a forum for discussing the ACO's performance data and exploring strategies for improvement.

Results from the ACO Practice Site Administrator Survey indicate that nearly all of the ACO's practice sites report and share performance measures on quality with physicians and that one-on-one review and feedback is the primary method through which the ACO manages performance. The majority of the ACO's practice sites also report receiving and sharing cost-related performance data with providers as well.

Figure 1. Provider Engagement and Physician Performance Management Approaches

Number of Practices Reporting in the State, N = 225

Number of Practices Reporting in FLN Reliant, N = 8

Figure displays responses to Q37. Which of the following approaches are used to manage the performance of individual physicians who practice at your site? Select all that apply.

Statistical significance testing was not done due to small sample size.

FLN Reliant Administrator Perspective: "Fallon is a very tightly managed provider group. They have a strong infrastructure...and unlike some ACOs where a bunch of different provider groups came together as a confederacy, [this group] speaks with one voice."

Recommendations

The IA encourages FLN Reliant to review its practices in the following aspects of the Organizational Structure and Engagement focus area, for which the IA did not identify sufficient documentation to assess progress:

• establishing a clear, direct mechanism through which the ACO's PFAC reports to its governing committees.

Promising practices that ACOs have found useful in this area include:

✓ Established governance structures

- Engaging Community Partners (CPs) in ACO governance by developing a subcommittee with ACO and CP representatives focused on increasing CP integration and collaboration.
- Creating a centralized PFAC to synthesize information from practice site specific PFACs and disseminate promising practices to other provider groups and practice sites within the ACO's network.
- Seeking feedback from consumer representatives or PFACs related to member experience prior to adoption of new care protocols or other changes.
- Including a patient representative in each of an ACO's subcommittees in addition to having a patient representative on the governing board.

Provider engagement in delivery system change

- Protecting dedicated provider time for population health level activities or individual quality improvement projects.
- Engaging frontline providers in continuous feedback loops to identify areas where patient experience could be improved.
- Hosting regular meetings between providers or provider groups and senior management to collect provider feedback on care management operations and quality improvement initiatives.
- o Developing provider-accessible performance dashboards with practice-site level data.
- Employing individuals in roles dedicated to QI, who assist providers and practice sites to review quality measures and identify pathways to improve care processes and provider performance.

2. INTEGRATION OF SYSTEMS AND PROCESSES

On Track Description

Characteristics of ACOs considered On track:

- Administrative coordination among ACO member organizations and with CPs
 - circulates frequently updated lists including enrollee contact information and flags members who are appropriate for receiving CP supports;
 - shares reports including risk stratification, care management, quality, and utilization data with practice sites;
 - practice sites report that when members are receiving care coordination and management services from more than one program or person, these resources typically operate together efficiently.
- ✓ Clinical integration among ACO member organizations and with CPs
 - deploys shared team models for care management, locating ACO staff at practice sites, and providing both role-specific and process-oriented training for staff at practice sites;

- enables PCP access to all member clinical information through an EHR; and sites are able to access results of screenings performed by the ACO;
- o co-locates BH resources and primary care where appropriate.

Joint management of performance and quality

- articulates a clear and reasoned plan for quality management that jointly engages practice sites and ACO staff, and explicitly incorporates specific quality metrics;
- dedicates a clinician leadership role and ACO staff to reviewing performance data, identifying performance opportunities, and implementing associated change initiatives in cooperation with providers.
- ✓ ACO/MCO coordination (at Accountable Care Partnership Plans)
 - shares administrative and clinical data between ACO and MCO entities, and circulates regular reports including population health and cost-of-care analysis;
 - is coordinated by a Joint Operating Committee for alignment of MCO and ACO activities, which manages clinical integration and is planning transitions of functions from MCO to ACO over time.

Results

The IA finds that FLN Reliant is **On track with no recommendations** in the Integration of Systems and Processes focus area.

Administrative coordination among ACO member organizations and with CPs

FLN Reliant states that integration with Community Partners (CPs) is part of their JOC mission. The JOC includes a CP representative on its Board. The ACO stated that building stronger relationships with BH and LTSS CPs is part of their strategic plan. To build these relationships and improve integration, the ACO uses an electronic system to identify BH CP-eligible members. This system, operational for all BH CPs, automatically prompts the ACO to send the member's assessment to the BH CP and assigns future responsibility for performing assessments, care planning activities and ongoing management of the member. If a member's initial assessment indicates a behavioral health (BH) need, the system notifies Fallon staff who then contact an appropriate BH CP and provide the assessment results. FLN Reliant is also using an online community resource platform to address targeted health-related social needs for members. The platform allows social workers, CP staff, and care managers to have point of service capability for managing referrals and scheduling services.

FLN Reliant reports using a population health management system with robust data and a predictive analytics tool that identifies opportunities to enhance quality and reduce costs in real time. FLN Reliant reports 37% utilization of the platform by clinical operations staff across ACO practice sites. In addition to this analytics platform, all primary care teams have access to a data visualization and reporting platform comprised of the electronic health record (EHR) and claims data.

Results from the ACO Practice Site Administrator Survey indicate that the majority of practice sites felt that members receiving care coordination and management services from multiple programs felt that these resources "usually or always" operated together efficiently.

Clinical integration among ACO member organizations and with CPs

FLN Reliant embeds a team of nurse managers and other healthcare professionals in their primary care sites to monitor and develop care plans for complex patients or patients undergoing care transitions. FLN Reliant embeds some staff at primary care clinics and locates some staff members

with specialized expertise at the ACO's central office. FLN Reliant reports that CP staff are active members of their interdisciplinary care teams (ICTs).

All new FLN Reliant staff participate in four to twelve weeks of onboarding training to learn the culture and strategy of the organization. FLN Reliant offers specialized training in the care model, patient engagement strategies and information systems to those working in care coordination through the Office of Population Health.

Technology is a key part of FLN Reliant's clinical integration and care management strategy. All providers in the ACO use a single EHR that integrates clinical workflows and other administrative processes. The platform also provides 'read only' and messaging capabilities for CPs and preferred referral providers. FLN Reliant developed the technical capacity to enhance CP provider access to the EHR, allowing them to enter pertinent data and receive alerts when patients are in the ER. FLN Reliant is in the process of onboarding individual CPs to this platform.

By the end of 2018, FLN Reliant reported having embedded BH providers at 90% of practice sites.

In the ACO Practice Site Administrator Survey, a majority of ACO practice sites reported that MassHealth members with BH conditions are "usually or always" referred to BH providers, and about half of sampled practice sites reported that prescribing clinicians and counseling therapists are colocated at the practice site (Figure 2).

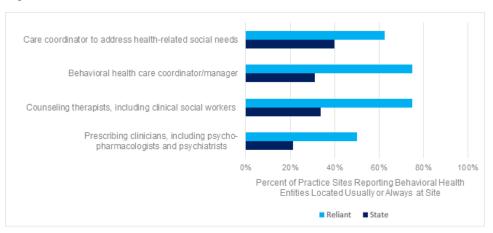

Figure 2. Co-Location of Behavioral Health Resources

Number of Practices Reporting in the State, N = 225 Number of Practices Reporting in FLN Reliant, N = 8

Figure displays responses to Q8b. For the Behavioral Health entities you selected in the previous question, how often are they located within your practice site? For those entities to which you never refer, please select Don't Know/Not Applicable. Statistical significance testing was not done due to small sample size.

FLN Reliant Administrator Perspective: "I think one of the unique aspects of the ACO is actually the relationship with the CPs. We reached out to the CPs in our service area way back in January of '18, maybe even December of '17, and invited them to the table. So they are part of our monthly meetings, [...] it's building a really collegial relationship."

Joint management of performance and quality

FNL Reliant's JOC Quality Committee is responsible for the ACO's quality and performance management. The Clinical Affairs Committee and Integrated Care Committee report to the Quality Committee and jointly oversee the management of performance and quality. The Clinical Affairs Committee addresses clinical issues, BH service delivery, care integration with partners such as CPs, integrated care operations, and social services integration for HRSNs. The Integrated Care

Committee develops "care management processes, workflows and policies for key care management tasks including, but not limited to, comprehensive assessment, formation of the ICT, development of the Interdisciplinary Care Plan (ICP) and ICP implementation." The Fallon Health and Reliant Medical Group representatives who comprise the JOC review performance improvement activity progress at JOC meetings.

FLN Reliant leverages data shared between Fallon Health and Reliant Medical Group to create member reports related to performance management. Fallon Health sends Reliant raw claims data, reports on enrollment, finance, utilization and daily membership, in addition to daily census reports for at-risk members. Reliant appends much of these data onto their native EHR records to drive PHM operations. FLN Reliant reported tracking several monthly performance metrics including initial assessments completed for newly enrolled members within ninety days.

ACO/MCO coordination (at Accountable Care Partnership Plans)

FLN Reliant's JOC coordinates activities between FLN and Reliant, manages clinical integration, and provides oversight of the population health strategy and outcomes of practice site improvement initiatives. The FLN and Reliant representatives on the JOC have equal decision-making authority regarding the integration of medical, behavioral, and social support services. FLN and Reliant are able to electronically share member contact information, comprehensive needs assessments, and care plans.

Recommendations

The IA has no recommendations for the Integration of Systems and Processes focus area.

Promising practices that ACOs have found useful in this area include:

- ✓ Administrative coordination among ACO member organizations and with CPs
 - Establishing weekly meetings to discuss newly engaged members.
 - Establishing monthly meetings with practices sites and CPs to discuss member care plans.
 - Creating a case review process including care coordination, service gaps and service duplication.
 - o Sharing member risk stratification reports including results of predictive modeling.
- ✓ Clinical Integration among ACO member organizations and with CPs
 - Designating a practice site champion responsible for integrating Care Coordination and Care Management (CCCM) and clinical care plans.
 - Embedding CCCM staff at practice sites to participate in shared model for care management.
 - Providing resiliency training to CCCM staff to improve team cohesion and offer emotional support.
 - Developing a centralized care management office to support member care teams in conducting needs assessment, follow-up, disease management and transitions of care.
 - o Following members for at least 30 days post-discharge from the hospital.
 - Providing laptops or other devices that enable EHR access by off-site providers during visits with members.

- Holding monthly meetings of CCCM teams to share best practices, develop solutions to recent challenges and provide collegial support.
- Joint management of performance and quality
 - Developing practice site specific quality scorecards and reviewing them at monthly or quarterly meetings.
 - Having the Joint Operating Committee (JOC) review scorecards of clinical, quality, and financial measures.
 - Sharing individual performance reports containing benchmarks or practice wide comparisons with providers.
- ✓ ACO/MCO coordination (at Accountable Care Partnership Plans)
 - Reviewing performance and quality outcomes at regular governance meetings.
 - Developing coordinated goals related to operations, budget decisions and clinical quality outcomes

3. WORKFORCE DEVELOPMENT

On Track Description

Characteristics of ACOs considered On track:

- ✓ Recruitment and retention
 - successfully hired staff for care coordination and population health, leaving no persistent vacancies;
 - uses a variety of mechanisms to attract and retain a diverse team, such as opportunities for career development, educational assistance, ongoing licensing and credentialing, loan forgiveness and leadership training.

✓ Training

- offers training to staff, including role-specific topics such as integrating primary care, behavioral health, health-related social needs screening and management, motivational interviewing, and trauma-informed care;
- has established policies and procedures to ensure that staff meet the contractual training requirements, and holds ongoing, regularly scheduled, training to ensure that staff are kept up to date on best practices and advances in the field as well as refreshing their existing knowledge.
- Teams and staff roles designed to support person-centered care delivery and population health
 - hires nonclinical staff such as CHWs, navigators, and recovery peers, and deploy them as part of interdisciplinary care delivery teams including CCCM staff, medical providers, social workers and BH clinicians;
 - deploys clinical staff in population health roles and nontraditional settings and trains a variety of staff to provide services in homes or other nonclinical settings.

Results

The IA finds that FLN Reliant is **On track with no recommendations** in the Workforce Development focus area.

Recruitment and retention

FLN Reliant has implemented recruiting and retention strategies that appear to be mitigating persistent vacancies. Like many ACOs, FLN Reliant maintains relationships with several universities including the Massachusetts College of Pharmacy and Health Sciences, to enable regular recruiting of CCCM and PHM staff. FLN Reliant also reports the ability to leverage an affiliation with Optum to recruit needed staff.

FLN Reliant has demonstrated clear efforts to increase staff retention levels. FLN Reliant uses ongoing professional development opportunities, mentoring, employee recognition and assistance programs, and career growth activities to attempt to mitigate staff attrition and increase staff satisfaction. FLN Reliant also reports specific efforts to assist qualified non-clinical staff in redeploying to clinical roles through higher education assistance and targeted professional development efforts.

Training

FLN Reliant has a centralized learning and development department that supports all employee onboarding, creates local trainings at primary care sites and oversees all professional development courses. Onboarding programs can last anywhere between 4-12 weeks and provide basic insights into the organization's history, strategy, and culture while also pairing employees with formal peer mentors or onboarding advisors to assist new employees during onboarding periods. Additionally, FLN Reliant reports maintaining program-specific training on topics like the ACO's overall care model, patient engagement, and information systems.

Teams and staff roles designed to support person-centered care delivery and population health

FLN Reliant's care teams include patient navigators, community health workers, nurse care managers, social workers, nurse practitioners, physician assistants, and physicians in an attempt to deliver greater patient-centered care. LTSS and BH CP staff are also frequently embedded members of care teams. FLN Reliant has also reported using social workers to, among other functions, leverage knowledge of community resources to integrate HRSNs into care plan designs.

Referral Management Teams focus on directing members to the appropriate providers and teams within the ACO. Health coordinators focus on evidence-based prevention measures, such as screenings and testing and working with primary care teams to adhere to recommended care protocols. Clinical nurse liaisons perform utilization review functions for inpatient or rehabilitation stays and determine the length of stay and level of care as well as patient care transitions.

Recommendations

The IA has no recommendations for the Workforce Development focus area.

Promising practices that ACOs have found useful in this area include:

✓ Promoting diversity in the workplace

- Compensating staff with bilingual capabilities at a higher rate.
- Establishing a Diversity and Inclusion Committee to assist HR with recruiting diverse candidates.
- Advertising in publications tailored to non-English speaking populations.

- Attending minority focused career fairs.
- o Recruiting from diversity-driven college career organizations.
- Tracking the demographic, cultural, and epidemiological profile of the service population to inform hiring objectives.
- Implementing an employee referral incentive program to leverage existing bilingual and POC CP staff's professional networks for recruiting.
- Advertising positions with local professional and civic associations such as the National Association of Social Work, Spanish Nurses Association, Health Care Administrators, National Association of Puerto Rican and the Hispanic Social Workers.
- Recruiting in other geographic areas with high concentrations of Spanish speakers or other needed language skills, and then helping qualified recruits with relocation expenses.

Recruitment and retention

- Contracting with a local social services agency capable of providing the ACO with short term CHWs, enabling the ACO to rapidly increase staff on an as-needed basis.
- Onboarding cohorts of new CCCM staff with common start dates, enabling shared learning.
- Implementing mentorship programs that pair newly onboarded staff with senior members to expedite training, especially amongst CCCM teams with complex labor divisions.
- Providing opportunities for a staff voice in governance through regularly scheduled leadership town halls at individual practice sites.
- Recruiting staff from professional associations, such as the Case Management Society of America, and from targeted colleges and universities.
- o Offering staff tuition reimbursement for advanced degrees and programs.
- Using employee referral bonuses to boost recruitment.

✓ Training

- Offering staff reimbursement for training from third party vendors.
- Tracking staff engagement with training modules and proactively identifying staff who have not completed required trainings.
- Providing additional training opportunities through on-line training programs from third party vendors.
- o Offering Medical Interpreter Training to eligible staff.
- Sponsoring staff visits to out of state health systems to learn best practices and bring these back to the team through peer-to-peer trainings.
- Teams and staff roles designed to support person-centered care delivery and population health
 - o Protecting provider time for pre-visit planning.
 - Pairing RN care managers or social workers with CHWs to provide care coordination.

- o Including pharmacists/pharmacy technicians and dieticians on care teams.
- Developing trainings and protocols for staff providing home visits.
- Developing trainings and protocols for staff using telemedicine.
- Leveraging CHWs who specialize in overcoming barriers to engagement, including issues of distrust of the medical community, to build relationships with hard-to-engage members.

4. HEALTH INFORMATION TECHNOLOGY AND EXCHANGE

On Track Description

Characteristics of ACOs considered On track:

✓ Infrastructure for care coordination and population health

- o uses an EHR to aggregate and share information among providers across the ACO
- has a care management platform in place to facilitate collaborative patient care across disciplines and providers;
- uses a population health platform that integrates claims, administrative, and clinical data, generates registries by condition or risk factors, predictive models, utilization patterns, and financial metrics, and identifies members eligible for programs or in need of additional care coordination.

✓ Systems for collaboration across organizations

- o has taken steps to improve the interoperability of their EHR;
- shares real-time data including event notifications, and uses dashboards to share real time program eligibility and performance data;
- creates processes to enable two-way exchange of member information with CPs and develops workarounds to solve interoperability challenges.

Results

The IA finds that FLN Reliant is **On track with no recommendations** in the Health Information Technology and Exchange focus area.

Infrastructure for care coordination and population health

Primary care teams at FLN Reliant are able to access performance, clinical, and member-level data in the EHR. All care management staff across the ACO have access to the EHR, where care management workflows and processes are integrated and care management documentation is stored. The EHR interfaces with an analytics platform which draws from EHR clinical data and payor claims information and provides reporting and visualization capabilities.

FLN Reliant has developed PHM infrastructure that facilitates timely notification of care teams and development of customized care plans for the most complex members and members experiencing a care transition. FLN Reliant also reports developing a predictive analytics tool that incorporates HRSNs for the purposes of stratifying risk levels of members. FLN Reliant invested in upgrades to their analytics platform to improve their predictive modeling capability, particularly for their increasing MassHealth population.

Systems for collaboration across organizations

FLN Reliant's EHR is ONC-certified, and is connected with the Mass HIway⁶, the Commonwealth's statewide health information exchange.

FLN Reliant Administrator Perspective: "I think the biggest strength...is they have one [EHR] for everybody...I think that [the ACO] is in a really good spot, again, because every single provider is on the same [EHR]. They have physician champions who are really well-versed in informatics. So I think that they really have it."

All participating PCP sites have full access to Admission, Discharge, Transfer (ADT) feeds and realtime event notification and the ACO can fully incorporate this data into their population health analytics technology. The EHR also includes event notifications through ACO-wide ADT data feeds. FLN Reliant has enabled certain automated referral and authorizations across the ACO and is configured for external alerts for CPs.

FLN Reliant is able to share and/or receive electronic member contact information, comprehensive assessments and care plans through secure and compliant means with all or the majority of their participating PCP sites, participating specialists, CPs, non-affiliated providers and managed care plan. FLN Reliant's EHR has been configured to enable two-way communication between CP and ACO care teams.

Results from the ACO Practice Site Administrator Survey indicate the majority of FLN Reliant practice sites agree or strongly agree that EHR and population and care management platforms improve their ability to coordinate care for MassHealth members (Figure 3).

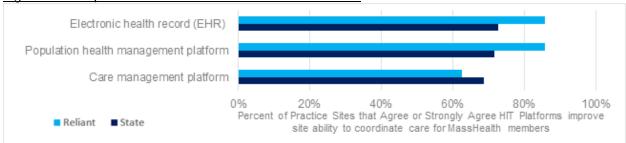

Figure 3. Perceptions of HIT Platforms for Care Coordination

Number of Practices Reporting in the State, N = 225Number of Practices Reporting in FLN Reliant, N = 8

Figure displays responses to Q13_EHR, Q13_CMP, Q13_PHP. To what extent do you agree that the Electronic Health Record/ Care Management Platform/Population Health Platform improves your ability to coordinate care for your MassHealth members?

Statistical significance testing was not done due to small sample size.

Recommendations

The IA has no recommendations for the Health Information Technology and Exchange focus area.

Promising practices that ACOs have found useful in this area include:

✓ Infrastructure for care coordination and population health

o Leveraging EHR integrated care management and population health platforms.

⁶ Mass HIway is the state-sponsored, statewide, health information exchange.

- Automating risk stratification to identify high-risk, high-need members.
- o Developing HIT training for all providers as part of an on-boarding plan.
- Incorporating meta-data tagging into care management platforms to allow supervisors to monitor workflow progress.
- Conducting ongoing review and evaluation of risk stratification algorithms to improve algorithms and refine the ACO's approach to identifying members at risk who could benefit from PHM programs.

✓ Systems for collaboration across organizations

- Establishing EHR portals that allow members to engage with their chart and their care teams.
- Providing EHR access through a web portal for affiliated providers, CPs or other entities whose EHR platforms are not integrated with the ACOs EHR.
- Developing methods to aggregate data from practice sites across the ACO; particularly if sites use different EHRs.
- Pushing ADT feeds to care managers in real time to mitigate avoidable ED visits and/or admissions.
- Developing continuously refreshing dashboards to share real-time program eligibility and performance data.

5. CARE COORDINATION AND CARE MANAGEMENT

On Track Description

Characteristics of ACOs considered On track:

- ✓ Full continuum collaboration
 - collaborates with state agencies such as DMH;
 - has established processes for identifying members eligible for BH or LTSS services and collaborating with CPs, including exchanging member information, and collaborating for care coordination when CP has primary care management responsibility;
 - o designates a point of contact for CPs to facilitate communication;
 - incorporates social workers into care management teams and integrates BH services, including Office-Based Addiction Treatment (OBAT), into primary care.

✓ Member outreach and engagement

- uses both IT solutions and manual outreach to improve accuracy of member contact information;
- uses a variety of methods to contact assigned members who cannot be reached telephonically by going to members' homes or to community locations where they might locate the individual (e.g. a congregate meal site);
- addresses language barriers through steps such as translating member-facing materials, providing translators for appointments, and recruiting CCCM staff who speak members' languages;

 supports members who lack reliable transportation by providing rides or vouchers⁷, and/or providing services in homes or other convenient community settings;

Connection with navigation and care management services

- locates CCCM staff in or near EDs;
- enables staff to build 1:1 relationships with high-need members, and uses telemedicine, secure messaging, and regular telephone calls for ongoing follow up with members;
- provides members with 24/7 access to health education and nurse coaching, through a hotline or live chat;
- implements best practices for transitions of care, including warm handoffs between transition of care teams and ACO team;
- implements processes to direct members to the most appropriate care setting, including processes to re-direct members to primary care to reduce avoidable emergency department visits;

✓ Referrals and follow up

- standardizes processes for referrals for BH, LTSS, and health related social needs (HRSN), and ability to systematically track referrals, enabling PCPs and care coordinators to confirm that a member received a service, incorporate results into the EHR and care plan;
- conducts regular case conferences to coordinate services when a member has been referred.

Results

The IA finds that FLN Reliant is **On track with limited recommendations** in the Care Coordination and Care Management focus area.

Full continuum collaboration

FLN Reliant provides full continuum collaboration across care management teams by including social workers, care managers, health coordinators, and referral management staff in addition to physicians and nurses. These ACO-based care teams focus on complex care management, social work, referral management, and care coordination.

FLN Reliant integrates CPs into the care process through the EHR's bi-directional messaging and data flows and the inclusion of CP members across the ACO's various care teams. The EHR flags members eligible for BH or LTSS CPs based on initial outreach, assessments, or MassHealth identified potential CP enrollees. This flag triggers FLN Reliant to reach out to CPs to review initial assessments and identify initial care management plans and responsibilities.

Member outreach and engagement

FLN Reliant offers member education and health literacy programs with both on-site and remote options. These include health education through disease management workshops for members with chronic conditions such as asthma, congestive heart failure, cardiac disease, depression, and

⁷ ACOs should utilize MassHealth Transportation (PT-1) for member needs first as appropriate.

diabetes. In addition, FLN Reliant has programs for childbirth education, over-the-counter medication education, nutrition, childhood and adult obesity, and a tobacco cessation initiative, Quit to Win.

Member outreach is conducted via channels most appropriate to the individual member and family which may include in-person engagement at the practice site, telephonic, mail, or face-to-face in community settings. If a member is identified as eligible for a program, ACO staff attempts to reach the member telephonically three times prior to reaching out via mail with a letter containing program and contact information.

Connection with navigation and care management services

FLN Reliant's navigation and care management process is supported by its health information technology infrastructure and enables staff to build relationships with high-need members using secure messaging and regular telephone calls for ongoing follow-up with members.

FLN Reliant uses a variety of methods to connect members with appropriate supports, such as community-based health screenings and a free 24/7 health information coaching line staffed by licensed clinical staff who offer personal health education, triage, and symptom and chronic condition support. Care team staff also provide members with individualized member education and informational resources.

Utilizing its analytics platform and clinical staff teams located across their primary care sites, FLN Reliant developed processes to quickly identify high-need members and create customized care transition plans. Clinical nurse liaisons ensure the adherence to evidence-based practices during transitions and perform utilization review functions for inpatient or rehabilitation stays to determine expected length of stay and level of care needed at each care location.

Referrals and follow-up

FLN Reliant recently completed an automation process for referrals and authorizations across the ACO. In PY2, the ACO reported that "Reliant and Fallon have successfully established connectivity between the systems [...] to automate referral and authorization processes, eliminating redundancies and improving member and provider satisfaction. The data flow between the two organizations has been automated, eliminating the manual staff interventions needed to transmit information." FLN Reliant reports using its referral tracking and analytics platform as well as its EHR platforms to coordinate follow-up with members. Teams at the ACO also work in tandem to better coordinate care and follow-up with members. The Care Management Team, the Referral Management Team, the nurse liaisons, and health coordinators work together to manage and coordinate member care across the spectrum, from home-based care to adult and pediatric in-office well-visits.

Results from the ACO Practice Site Administrator Survey indicate that a majority of FLN Reliant sites report that care coordination and management resources, such as any type of non-clinician, home visits, and targeted interventions for members who have been risk stratified into a high-need subgroup, are often or always involved in helping complex high-need MassHealth members adhere to the care plan. All sampled FLN Reliant sites report that any type of care coordinator or manager is always or often involved in helping complex high-need MassHealth members adhere to the care plan.

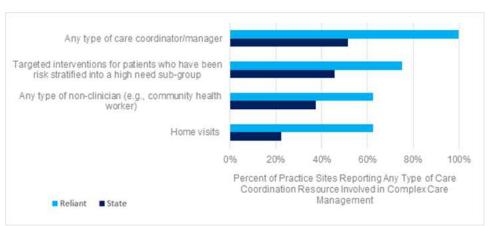

Figure 4. Care Coordination Resources Involved in Helping High-Need Members Adhere to the Care Plan

Number of Practices Reporting in the State, N = 225

Number of Practices Reporting in FLN Reliant, N = 8

Figure displays responses to Q6. For your complex high-need MassHealth patients, how often is any type of care coordination or management resource involved in helping the patient adhere to the care plan? Statistical significance testing was not done due to small sample size.

FLN Reliant Administrator Perspective: "...with practice transformation where they've literally taken the providers' offices away and built these rooms: in the room sits the PCP, the social worker, sometimes nutrition is in there, the nurse, and so it's kind of an informal -- you're thinking about a patient or you just kind of roll your chair back and say 'Hey, you know, what should I do?' And it's really effective... it's a true team, and it allows people to work to the top of their licenses. So there's just a lot of satisfaction."

Recommendations

The IA encourages FLN Reliant to review its practices in the following aspects of the Care Coordination and Care Management focus area, for which the IA did not identify sufficient documentation to assess progress:

- designating a point of contact for CPs to facilitate communication;
- supporting members who lack reliable transportation by providing rides or vouchers⁸, and/or providing services in homes or other convenient community settings;
- addressing language barriers through steps such as translating member-facing materials, providing translators for appointments, and recruiting CCCM staff who speak members' languages;
- locating CCCM staff in or near EDs; and
- enabling staff to build 1:1 relationships with high-need members, and using secure messaging, and regular telephone calls as appropriate for ongoing follow up with members.

⁸ ACOs should utilize MassHealth Transportation (PT-1) for member needs first as appropriate.

Promising practices that ACOs have found useful in this area include:

✓ Full continuum collaboration

- Establishing a systematic documentation process to track members receiving care coordination from CPs.
- Matching members based on their needs to interdisciplinary care coordination teams that include representatives from primary care, nursing, social work, pharmacy, community health workers and behavioral health.
- Expanding BH integration through multiple strategies, including embedding staff in primary care sites, reverse integration of physical health care at BH sites, and telehealth.
- Increasing two-way sharing of information between ACOs and CPs.
- Leveraging EHR-integrated tools to flag members requiring a higher level of care coordination.
- Coordinating with government agencies and community organizations to enhance care coordination and avoid duplication for members receiving other services.
- Supporting families of pediatric members by offering to have care managers work with school-based personnel to address health or disability related needs identified in the Individualized Education Program.

Member outreach and engagement

- Developing a high-intensity program for extremely high-need, high-risk members with strategically low case load.
- Establishing trust between members and CCCM staff by building and maintaining a 1:1 consistent relationship.
- Creating a mobile phone lending program for hard-to-reach members, particularly those experiencing housing instability.⁹
- Embedding CCCM staff in EDs.
- Creating a "Navigation Center" to manage referrals outside the ACO, handle appointment scheduling, and coordinate testing, follow-up, and documentation transfers.
- Developing an assistance fund to support transportation vouchers¹⁰ and low-cost cell phones.¹¹

✓ Connection with navigation and care management services

- o Utilizing EHR-based documentation transfer during warm handoffs.
- Establishing daily or weekly care management huddles that connect PCPs and CCCM teams and streamline care transitions.

⁹ ACOs should first utilize Lifeline program for members as appropriate

¹⁰ ACOs should utilize MassHealth Transportation (PT-1) for member needs first as appropriate.

¹¹ ACOs should first utilize Lifeline program for members as appropriate.

✓ Referrals and follow up

- Utilizing EHR messaging tools to better describe the purpose of specialty consults and a plan for follow-up communication.
- Automating referral tracking and management, using flags to prompt referrals, linked directories to suggest appropriate providers and services, notifications to care managers when referral results are available, and databases allowing care teams to easily identify follow-up needs.

6. POPULATION HEALTH MANAGEMENT

On Track Description

Characteristics of ACOs considered On track:

✓ Integration of health-related social needs

- standardizes screening for health-related social needs (HRSN) that includes housing, food, and transportation;
- o incorporates HRSN with other factors to target members for more intensive services;
- Builds mature partnerships with community-based organizations to whom they can refer members for services
- has a plan approved for provision of flexible services;

✓ Population health analysis

- articulates a coherent strategy for stratifying members to service intensity and use of a population health analysis platform to combine varied data sources, develop registries of high-risk members, and stratify members at the ACO level.
- integrates cost data into reports given regularly to providers to facilitate cost-of-care management.

Program development informed by population health analysis

- offers PHM programs that target all eligible members (not just facility-specific), and target members by medical diagnosis, BH needs (including non-CP eligible), HRSNs, care transitions;
- o offer interactive wellness programs such as smoking cessation, diet/weight management.

Results

The IA finds that FLN Reliant is **On track with no recommendations** in the Population Health Management focus area.

Integration of health-related social needs

All FLN Reliant practice sites responding to the ACO Practice Site Administrator Survey indicated that screening for depression takes place at practice sites. FLN Reliant practice sites responding to the survey also indicated that they conduct screening for a range of needs including housing instability, transportation needs, opioid use, utility needs, and need for financial assistance with medical bills. (Figure 4).

FLN Reliant offers several HRSN supports for all eligible members. These supports include homebased care for members who cannot visit the office, community-based education and programs, partnerships with CPs, and targeted screening and wellness programs. FLN Reliant also works with community-based organizations, such as BH and LTSS CPs to provide care that integrates behavioral and social determinants of health into its various care management programs. The Clinical Affairs team addresses care integration with CPs and integration of social services to address social determinants of health. Social workers, integral to the care team, work to integrate social determinants of health into member care plans. FLN Reliant also educates PCPs on how members can access appropriate services.

FLN Reliant has received approval for their plan for provision of Flexible Services.

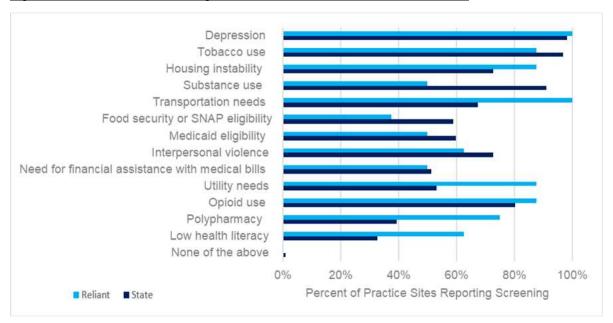

Figure 4. Prevalence of Screening for social and other needs at Practice Sites

Number of Practices Reporting in the State, N = 225

Number of Practices Reporting in FLN Reliant, N = 8

Figure displays responses to Q14. For which of the following are MassHealth members in your practice systematically screened? Select if screening takes place at any level (Managed Care Organization, Accountable Care Organization, Practice, CP)

Statistical significance testing was not done due to small sample size.

Population health analysis

FLN Reliant's risk stratification is based on initial assessment results, claims data from the state, referrals, and a predictive modeling tool assessing the likelihood of hospitalization for all members. Emergency Department visits, inpatient hospital stays, office visits due to urgent conditions and/or health concerns, self-reported member concerns, and provider/staff observation of functional deterioration can all trigger referrals.

Working with its BH care coordinators, the ACO runs a depression management program to improve outcomes through early identification, interventions, and continuous monitoring and evaluation. FLN Reliant also conducts biometric screenings in the community through health fairs where members have access to health education and screenings for carbon monoxide testing, grip strength, random glucose testing, cholesterol, stress management, and body composition.

During the preparation year, the ACO reported fully implementing a new predictive analytics application to integrate social determinants of health big data into PHM and identify members for care management and targeted intervention. In 2018, 37% of providers and clinical operations staff reported using the tool, and the ACO aims to monitor the use of the tool and find new opportunities to optimize the analytics-based tool.

FLN Reliant utilizes performance accountability goals relying on TCOC analysis. The quality metrics utilized to evaluate performance and quality data are accessible to all staff and providers via an EHR.

One of the ACO's goals is "strengthening [the] foundation and infrastructure within [their] existing Population Health Management organization by investing in technology that allows [them] to gather, measure, and report on performance data," and the ACO reports progress in harnessing technological capacity to make strides towards achieving this goal. Notable examples include its application for PHM and predictive analytics, improving connectivity between Reliant's and Fallon's systems, and automating referral data between the two organizations.

Program development informed by population health analysis

FLN Reliant also provides several population health programs catered to specific needs, such as biometric screenings, diabetes management, the Quit-to-Win tobacco cessation initiative, health educators and coaching for members diagnosed with congestive heart failure, an over-the-counter-medication education program, and various other programs.

FLN Reliant has also described its plans to develop additional interactive programs based on findings from population health analytics and its risk stratification algorithm.

Recommendations

The IA has no recommendations for the Population Health Management focus area.

Promising practices that ACOs have found useful in this area include:

✓ Integration of health-related social needs

- Implementing universal HRSN screening in all primary care sites and behavioral health outpatient sites.
- Using screening tools designed to identify members with high BH and LTSS needs.
- Using root-cause analysis to identify underlying HRSNs or unmet BH needs that may be driving frequent ED utilization or readmissions.
- Partnering with local fresh produce vendors, mobile grocery markets, and food banks to provide members with access to healthy meals.
- Providing a meal delivery service, including medically tailored meals, for members who are not able to shop for or prepare meals.
- Organizing a cross-functional committee to understand and address the impact of homelessness on members' health care needs and utilization.
- Enabling members and CCCM field staff to document HRSN screenings in the EHR using tablet devices with a secure web-based electronic platform.
- Automating referrals to community agencies in the EHR/care management platform.

✓ Population health analysis

- Developing and utilizing condition-specific dashboard reports for performance monitoring that include ED and hospital utilization and total medical expense.
- Developing key performance indicator (KPI) dashboards, viewable by providers, that track financial and operational metrics and provide insights into patient demographics and how the population utilizes services.
- Developing a registry or roster that includes cost and utilization information from primary care and specialty services for primary care teams and ACO leadership to better serve MassHealth ACO members.
- Implementing single sign-on and query capability into the online Prescription Monitoring Program, so that providers can quickly access and monitor past opioid prescriptions to promote safe opioid prescribing.

Program development informed by population health analysis

- Engaging top level ACO leadership in design and oversight of PHM strategy.
- Developing methods to assess members' impactibility as well as their risk, so that programs can be tailored for and targeted to the members most likely to benefit.
- Developing services that increase access to real-time BH care, such as a SUD urgent care center.
- o Developing programs that address BH needs and housing instability concurrently.
- Offering SUD programs tailored to subgroups such as pregnant members, LGBT members, and members involved with the criminal justice system allowing the care team to specialize in helping these vulnerable populations.
- Providing education at practice sites or community locations such as:
 - Medication workshops that cover over-the-counter and prescription medication side effects, how to take medications, knowing what a medication is for, and identifying concerns to share with the doctor.
 - Expectant parenting classes that cover preparation for childbirth, breastfeeding, siblings, newborn care, and child safety.
 - Cooking classes that offer recipes for healthy and cost-effective meals.
- o Offering items that support family health such as:
 - Free diapers for members who have delivered a baby as an incentive to keep a postpartum appointment within 1-12 weeks after delivery.
 - Car seats, booster seats, and bike helmets.
 - Dental kits.

OVERALL FINDINGS AND RECOMMENDATIONS

The IA finds that FLN Reliant is On track or On track with limited recommendations across all six focus areas of progress under assessment at the midpoint of the DSRIP Demonstration. No recommendations are provided in the following focus areas:

- Integration of Systems and Processes
- Workforce Development
- Health Information Technology and Exchange
- Population Health Management

The IA recommends that FLN Reliant review its practices in the following aspects of the focus areas, for which the IA did not identify sufficient documentation to assess or confirm progress:

Organizational Structure and Engagement

 establishing a clear, direct mechanism through which the ACO's PFAC reports to its governing committees.

Care Coordination and Care Management

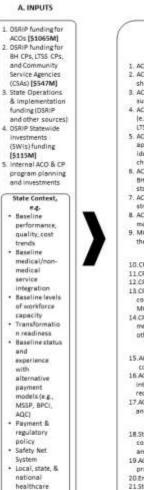

- designating a point of contact for CPs to facilitate communication;
- supporting members who lack reliable transportation by providing rides or vouchers¹², and/or providing services in homes or other convenient community settings;
- addressing language barriers through steps such as translating member-facing materials, providing translators for appointments, and recruiting CCCM staff who speak members' languages;
- locating CCCM staff in or near EDs; and
- enabling staff to build 1:1 relationships with high-need members, and using secure messaging, and regular telephone calls as appropriate for ongoing follow up with members.

FLN Reliant should carefully self-assess the areas noted above, and consider the corresponding promising practices identified by the IA for each focus area. Any action taken in response to the recommendations must comply with contractual requirements and programmatic guidance.

¹² ACOs should utilize MassHealth Transportation (PT-1) for member needs first as appropriate.

APPENDIX I: MASSHEALTH DSRIP LOGIC MODEL

DSRIP Implementation Logic Model

B. OUTPUTS (Delivery System Changes at the Organization and State Level) ACO, MCO, & CP/CSA ACTIONS SUPPORTING DELIVERY SYSTEM CHANGE (INITIAL PLANNING AND ONGOING IMPLEMENTATION) ACO UNIQUE ACTIONS 1. ACOs established with specific governance, scope, scale, & leadership 2. ACOs engage providers (primary care and speciality) in delivery system change through financial (e.g. shared savings) and non-financial levers (e.g. data reports) 3. ACDs recruit, train, and/or re-train administrative and provider staff by leveraging SWIs and other supports; education includes better understanding and utilization of BH and LTSS services 4. ACOs develop HIT/HIE infrastructure and interoperability to support population health management leg, reporting, data analyticsi and data exchange within and outside the ACO (e.g. CPs/CSAs; BH, LTSS, and specialty providers; social service delivery entities) 5. ACOs develop capabilities and strategies for non-CP-related population health management approaches, which includes risk stratification, needs screenings and assessments, and addressing the identified needs in the population via range of programs (e.g., disease management programs for chronic conditions, specific programs for co-occurring MH/SUD conditiona) 6. ACOs develop systems and structures to coordinate services across the care continuum li.e. medical. BH, LTSS, and social services), that align II e, are complementary) with services provided by other state agencies (e.g., OMH) 7. ACOs develop structures and processes for integration of health-related social needs into their PHM strategy, including management of fles services 8. ACOs develop strategies to reduce total cost of care (TCOC) (e.g. utilization management, referral management, non-OP complex care management programs, administrative cost reduction) 9. MCOs in Partnership Plans (Model A's) increasingly transition care management responsibilities to their ACO Partners CP/CSA UNIQUE ACTIONS 10 CPs established with specific governance, scope, scale, & leadership 11.CPs engage constituent entities in delivery system change through financial and non-financial levers 12.CPs/CSAs recruit, train, and/or re-train staff by leveraging SWIs and other supports 13 CPs/CSAs develop HIT/HIE infrastructure and interoperability to support provision of care coordination supports (e.g. reporting, data analytics) and data exchange within the CP (e.g. ACOs, MCDs; BH, LTSS; and specialty providers; social service delivery entities) 14 CPs/CSAs develop systems and structures to coordinate services across the care continuum (i.e. medical, BH, LTSS, and social services), that align (i.e. are complementary) with services provided by other state agencies (e.g., DMH) ACO, MCO, & CP/CSA COMMON ACTIONS 15.ACOs, MCOs, & CPs/CSAs establish structures and processes to promote improved administrative coordination between organizations (e.g. enrollee assignment, engagement and outreach) 16 ACOs, MCOs, & CPs/CSAs establish structures and processes to promote improved clinical integration acrossorganizations (e.g. administration of care management/coordination, recommendation for services) 17 ACOs, MCOs, & CPs/CSAs establish structures and processes for joint management of performance and quality, and conflict resolution STATEWIDE INVESTMENTS ACTIONS 18.State develops and implements SWI initiatives almed to increase amount and preparedness of community-based workforce available for ACOs & CPs/CSAs to hire and retain (e.g. expand residency and frontline extended workforce training programs)

- 19 ACOs & CPs/CSAs leverage DSRIP technical assistance program to identify and implement best practices
- 20.Entities leverage State financial support to prepare to enter APM arrangements.
- 21 State develops and implements SWI initiatives to reduce Emergency Department boarding, and to improve accessibility for members with disabilities and for whom English is not a primary language.

C. IMPROVED CARE PROCESSES (at the Member and Provider Level) AND WORKFORCE CAPACITY

IMPROVED IDENTIFICATION OF MEMBER NEED

- 1. Members are identified through risk stratification for
- participation in Population Health Management (PHM) programs 2. Improved identification of individual members' unmet needs
- (including SDH, 8H, and LTSS needs)

IMPROVED ACCESS

- Improved access to with physical care services (including pharmacy) for members
- Improved access to with BH services for members
- Improved access to with LT55 (i.e. both ACO/MCO-Covered and Non-Covered services) for members

IMPROVED ENGAGEMENT

- 6. Care management is closer to the member (e.g. care managers
- employed by or embedded at the ACO)
- 7. Members meaningfullyparticipate in PHM programs

IMPROVED COMPLETION OF CARE PROCESSES

- Improved physical health processes (e.g., measures for wellness & prevention, chronic disease management) for members
- improved BH care processes for members
- 10. Improved LTSS care processes for members
- Members experience improved care transitions resulting from PHM programs
- Provider staff experience delivery system improvements related to care processes

IMPROVED CARE INTEGRATION 13. Improved integration across physical care, 5H and LTSS providers

- for members 14. Improved management of social needs through flexible services
- and/or other interventions for members 15. Provider staff experience delivery system improvements related
- to care integration (including between staff at ACOs and CPs)

IMPROVED TOTAL COST OF CARE MANAGEMENT LEADING INDICATORS

16. More effective and efficient utilization indicating that the right care is being provided in the right setting at the right time (e.g. shifting from inpatient utilization to substatemt/community based UTSS; shifting more utilization to less-expensive community hospitals; restructuring of delivery system, such as through conversion of medicas/surgical beds to psychiatric beds, or reduction in inpatient capacity and increase in outpatient capacity).

IMPROVED STATE WORKFORCE CAPACITY

- 17. Increased preparedness of community-based workforce available 18. Increased community-based workforce capacity though more
- Increases community-based workforce capacity though more providers recruited, or through more existing workforce retrained
- 19. Improved retention of community-based providers

D. IMPROVED PATIENT OUTCOMES AND MODERATED COST TRENDS

experience MODERATED COST TRENDS 3. Moderated Medicaid cost trends for 400

IMPROVED MEMBER

OUTCOMES

1. improved member

2. Improved member

outcomes

trends for ACOenrolled population

PROGRAM SUSTAINABILITY

 SUSTAWABILITY
 Demonstrated sustainability of ACO models
 Demonstrated sustainability of CP model, including Enhanced LTSS model

- 6. Demonstrated
- sustainability of flexible services
- model
- 7. Increased
- acceptance of value-
- based payment
- arrangements among MassHealth
- MCOS, ACOS, CPS,
- and providers, including specialists

trends

APPENDIX II: METHODOLOGY

The Independent Assessor (IA) used participation plans, annual and semi-annual reports, survey responses, and key informant interviews (KIIs) to assess progress of Accountable Care Organizations¹³ (ACOs) towards the goals of DSRIP during the time period covered by the MPA, July 1, 2017 through December 31, 2019.

Progress was defined by the ACO actions listed in the detailed MassHealth DSRIP Logic Model (Appendix I), organized into a framework of six focus areas which are outlined below. This model was developed by MassHealth and the Independent Evaluator¹⁴ (IE) to tie together the implementation steps and the short- and long-term outcomes and goals of the program. It was summarized into a high-level logic model which is described in the CMS approved Massachusetts 1115 MassHealth Demonstration Evaluation Design document (<u>https://www.mass.gov/doc/ma-independent-evaluation-design-1-31-19-0/download</u>).

The question addressed by this assessment is:

To what extent has the ACO taken organizational level actions, across six areas of focus, to transform care delivery under an accountable and integrated care model?

DATA SOURCES

The MPA drew on multiple data sources to assess organizational performance in each focus area, including both historical data contained in the documents that ACOs were required to submit to MassHealth, and newly collected data gathered by the IA and/or IE. The IA performed a desk review of documents that ACOs were required to submit to MassHealth, including participation plans, annual and semi-annual reports. In addition, the IA developed and conducted an ACO Practice Site Administrator survey to investigate the practices and perceptions of participating primary care practices. The IE developed a protocol for ACO Administrator KIIs, which were conducted jointly by the IA and the IE.

List of MPA data sources:

Documents submitted by ACOs to MassHealth covering the reporting period of July 1, 2017 through December 31, 2019:

- Full Participation Plans (FPPs)
- Semi-annual and Annual Progress Reports (SPRs, APRs)
- Budgets and Budget Narratives (BBNs)

Newly Collected Data

- ACO Administrator KIIs
- ACO Practice Site Administrator Survey

¹³ See the ACO Background section for a description of the organization. In the case of a Model A ACO, an Accountable Care Partnership Plan, the assessment encompasses the partner managed care organization (MCO).

¹⁴ The Independent Evaluator (IE) – a distinct role separate from the Independent Assessor - is responsible for evaluating the outcomes of the Demonstration.

FOCUS AREA FRAMEWORK

The ACO MPA assessment findings cover six "focus areas" or aspects of health system transformation. These were derived from the DSRIP logic model, by grouping organizational level actions referenced in the logic model into the following domains:

- 1. Organizational Structure and Engagement
- 2. Integration of Systems and Processes
- 3. Workforce Development
- 4. Health Information Technology and Exchange
- 5. Care Coordination and Management
- 6. Population Health Management

Table 1 shows the ACO actions that correspond to each focus area. This framework was used to assess each ACO's progress. A rating of On track indicates that the ACO has made appropriate progress in accomplishing each of the actions for the focus area. Where gaps in progress were identified, the ACO was rated "On track with limited recommendations" or, in the case of more substantial gaps, "Opportunity for improvement."

Table 1. Framework for Organizational Assessment of ACOs

Focus Area	ACO Actions
Organizational Structure and Governance	 ACOs established with specific governance, scope, scale, & leadership ACOs engage providers (primary care and specialty) in delivery system change through financial (e.g. shared savings) and non-financial levers (e.g. data reports)
Integration of Systems and Processes	 ACOs establish structures and processes to promote improved administrative coordination between organizations (e.g. enrollee assignment, engagement and outreach) ACOs establish structures and processes to promote improved clinical integration across organizations (e.g. administration of care management/coordination, recommendation for services) ACOs establish structures and processes for joint management of performance and quality, and conflict resolution Accountable Care Partnership Plans (Model A) transition more of the care management responsibilities to their ACO Partners over the course of the Demonstration
Workforce Development	 ACOs recruit, train, and/or re-train administrative and provider staff by leveraging Statewide Investments (SWIs) and other supports; education includes better understanding and utilization of behavioral health (BH) and long-term services and supports (LTSS)
Health Information Technology and Exchange	 ACOs develop Health Information Technology and Exchange (HIT/HIE) infrastructure and interoperability to support provision of population health management (e.g. reporting, data analytics) and data exchange within and outside the ACO (e.g. Community Partners/Community Service Agencies (CPs/CSAs), BH, LTSS, and specialty providers)
Care Coordination and Care Management	 ACOs develop systems and structures to coordinate services across the care continuum (i.e. medical, BH, LTSS, and social services), that align (i.e. are complementary) with services provided by other state agencies (e.g., Department of Mental Health (DMH))

Population Health Management	 ACOs develop capabilities and strategies for non-CP-related population health management approaches, which include risk stratification, needs screenings and assessments, and addressing the identified needs in the population via range of programs (e.g., disease management programs for chronic conditions, specific programs for co-occurring mental health (MH)/substance use disorder (SUD) conditions) ACOs develop structures and processes for integration of health-related social needs (HRSN) into their Population Health Management (PHM) strategy, including management of flexible services ACOs develop strategies to reduce total cost of care (TCOC; e.g. utilization management, referral management, non-CP complex care management programs, administrative cost reduction)
---------------------------------	---

ANALYTIC APPROACH

The ACO actions are broad enough to be accomplished in a variety of ways by different ACOs, and the scope of the IA is to assess progress, not to prescribe the best approach for an ACO. Moreover, no preestablished benchmark is available to determine what represents adequate progress at the midpoint. The need for a realistic threshold of expected progress led the IA to use a semi-empirical approach to define the state that should be considered On track. Guided by the focus areas, the IA performed a preliminary review of Full Participation Plans, which identified a broad range of activities and capabilities that fell within the logic model actions. This provided specific operational examples of how ACOs can accomplish the logic model actions for each focus area. Once an inclusive list of specific items was compiled, the IA considered the prevalence of each item, and relevance to the focus area. A descriptive definition of On track performance for each focus area was developed from the items that had been adopted by a plurality of ACOs. Items that had been accomplished by only a small number of ACOs were considered to be emerging practices, and were not included in the expectations for On track performance. This calibrated the threshold for expected progress to the actual performance of the cohort as a whole.

Qualitative coding of documents to focus areas, and analysis of survey results relevant to each focus area, were used to assess whether and how each ACO had accomplished the actions for each focus area. The assessment was holistic, and as such did not require that ACOs meet every item on a list. A finding of On track was made where the available evidence demonstrated that the entity had accomplished all or nearly all of the expected items, and there are no recommendations for improvement. Where evidence was lacking in the results of desk review and survey, keyword searches of KII interview transcripts were used to seek additional information. Prior to finalizing the findings for an entity, the multiple reviewers convened to confirm that thresholds were applied consistently, and that the reasoning was clearly articulated and documented.

A rating of On track indicates that the ACO has made appropriate progress in accomplishing the indicators for the focus area. Where gaps in progress were identified, the entity was rated On track with limited recommendations or, in the case of more substantial gaps, Opportunity for improvement.

DATA COLLECTION

ACO Practice Site Administrator Survey Methodology

The aim of the ACO Practice Site Administrator Survey was to systematically measure ACO implementation and related organizational factors from the perspective of the ACOs' participating primary care practice sites. For the purpose of this report, "practice site" refers to an adult or pediatric primary care practice location.

The results of the survey were used in combination with other data sources to assess ACO cohort-wide performance in the MPA focus areas. The survey did not seek to evaluate the success of the DSRIIP program. Rather, the survey focused on illuminating the connections between structural components and implementation progress across various ACO types and / or cohorts for the purpose of midpoint assessment.

<u>Survey Development:</u> The survey tool was structured around the MPA focus areas described previously, with questions pertaining to each of the six areas. Following a literature review of existing validated survey instruments, questions were drawn from the National Survey of ACOs, National Survey of Healthcare Organizations and Systems, and the Health System Integration Manager Survey to develop measures relevant to the State and appropriate for the target group. Cognitive testing (field testing) of the survey was conducted at 4 ACO practice sites. Following the cognitive testing and collaboration with the State, survey questions were added or modified to better align with the purpose of the MPA and the target respondents.

<u>Sampling:</u> A sampling methodology was developed to yield a sample of practice sites that is reasonably representative of the ACO universe of practice sites. First, practice sites serving fewer than 50 attributed members were excluded. Next, a random sample of 30 sites was selected within each ACO; if an ACO had fewer than 30 total sites, all sites were included. A stratified approach was applied in order to draw a proportional distribution of sites across Group Practices and Health Centers (Health Centers include both Community Health Centers and Hospital-Licensed Health Centers). A 64% survey response rate was achieved; 225 practice sites completed the survey, out of 353 sampled sites. The responses were well-balanced across practice site type (Table 1) and across geographical region (Table 2).

Distribution of Sites by Practice Site Type			
Group Practices Health Centers			
Percentage of Practice Site Types in Survey Sample (N=353)	80%	20%	
Percentage of Practice Site Types in Surveys Completed (N=225)	78%	22%	

Table 2. Distribution of Practices Across Geography

Regional Distribution of Practice Sites					
	Central	Greater Boston	Northern	Southern	Western
Distribution of Practice Sites in Sample (N=353)	16%	22%	25%	24%	13%
Distribution of Practice Sites Responses $(N = 225)$	16%	19%	25%	25%	14%

<u>Administration</u>: The primary contact for each ACO was asked to assist in identifying the best individual to respond to the survey for each of the sites sampled. The survey was administered using an online platform; the survey opened July 18, 2019 and closed October 2, 2019. Survey recipients were e-mailed an introduction to the survey, instructions for completing it, a link to the survey itself, and information on where to direct questions. Multiple reminders were sent to non-responders, followed by phone calls reminding them to complete the survey.

<u>Analysis</u>: Results were analyzed using descriptive statistics at both the individual ACO level (aggregating all practice site responses for a given ACO) and the statewide ACO cohort level (aggregating all responses). Given the relatively small number of sites for each ACO, raw differences among ACOs, or

between an ACO and the statewide aggregate results, should be viewed with caution. The sample was not developed to support tests of statistical significance at the ACO level.

Key Informant Interviews

Key Informant Interviews (KII) of ACO Administrators were conducted in order to understand the degree to which participating entities are adopting core ACO competencies, the barriers to transformation, and the organization's experience with state support for transformation.¹⁵ Keyword searches of the KII transcripts were used to fill gaps identified through the desk review process.

¹⁵ KII were developed by the IE and conducted jointly by the IE and the IA. The IA utilized the KII transcripts as a secondary data source; the IA did not perform a full qualitative analysis of the KII.

APPENDIX III: RELIANT PRACTICE SITE ADMINISTRATOR SURVEY RESULTS

The ACOs survey results, in their entirety, are provided in this appendix. The MassHealth DSRIP Midpoint Assessment Report provides statewide aggregate results.

- 11 practice sites were sampled; 8 practice site administrators responded (73% response rate)
- Survey questions are organized by focus area.
- The table provides the survey question, answer choices, and percent of respondents that selected each available answer. Some questions included a list of items, each of which the respondent rated. For these questions (i.e., Q# 12), the items rated appear in the answer choices column.
- NA indicates an answer choice that is not applicable to the survey question.

FOCUS AREA: ORGANIZATIONAL STRUCTURE AND ENGAGEMENT

Q#	Question	Question Components or Answer Choices	1	2	3	4	5	6	7	Don't Know
	In the past year, to what degree	a. Physician compensation	0%	0%	0%	25%	13%	N/A	N/A	63%
	have the following practices in your clinic become more	b. Performance management of physicians	0%	0%	0%	25%	38%	N/A	N/A	38%

16	How often are MassHealth members referred from your practice to social service organizations to address health-related social needs (e.g., housing, food security)?	Almost Never, Rarely, Sometimes, Usually, Almost Always (1-5) Not Applicable	0%	13%	25%	25%	13%	N/A	N/A	25%
19	What is the main source of information that your practice uses to identify which of your MassHealth members are complex, high need patients? Select one.	 a. We perform an ad hoc review of information from our own practice's system(s) (e.g., EHR) when we think it is relevant (1) b. We regularly apply systematic risk stratification algorithms in our practice using our patient data (2) c. We receive risk stratification information from a managed care organization or accountable care organization (3) d. We do not have a way of knowing which patients are complex/high need (4) e. Don't know 	25%	38%	25%	0%	N/A	N/A	N/A	13%
29	Please select the option below that best describes the change in the past year in your practice site's ability to tailor delivery of care to meet the needs of patients affected by health inequities (e.g., by using culturally and linguistically appropriate services):	Gotten a lot harder (1) Gotten a little harder (2) No change (3) Gotten a little easier (4) Gotten a lot easier (5)	0%	13%	38%	38%	13%	N/A	N/A	N/A
30	How often does your practice site use site-specific data to identify health inequities within its served population? For example, data might include EHR charts or ACO reports.	Annually (1) Bi-annually (2) Quarterly (3) Monthly (4) On an ad hoc basis (5) We do not have access to this type of data. (6) We have access to this type of data but do no analyze it for health inequities. (7)	0%	0%	13%	50%	13%	25%	0%	N/A

FOCUS AREA: POPULATION HEALTH MANAGEMENT

GENERAL QUESTIONS

Q#	Question	Question Components or Answer Choices	1	2	3	4	5	6	7	Don't Know
20	Our records show that your practice is participating in the [ACO name] for some or all of its MassHealth Medicaid patients. Is that correct?	Yes (1) I am not aware of this (2)	88%	13%	N/A	N/A	N/A	N/A	N/A	N/A

20_O	Were you able to find a colleague who can help you answer questions about [ACO Name]?	Yes (1) No (2)	0%	100%	N/A	N/A	N/A	N/A	N/A	N/A
20a	Currently, which of the following best describes how many of your practice's patients are covered by [ACO Name]?	Very few (1) A minority (2) About half (3) A clear majority (4) Nearly all (5)	0%	20%	40%	0%	40%	N/A	N/A	N/A
36	Who owns your practice? (select one)	a. Independently owned (1) b. A larger physician group (2) c. A hospital (3) d. A healthcare system (may include a hospital) (4) e. Other (please specify) (5)	13%	13%	0%	38%	38%	N/A	N/A	N/A
39	Which of the following best describes your practice site?	Adult (1) Pediatric (2) Both (3)	25%	0%	75%	N/A	N/A	N/A	N/A	N/A
40	Currently which of the following best describes how many of your practice's patients are covered by any contracts with cost of care accountability?	Very few (1) A minority (2) About half (3) A majority (4) Nearly all (5)	0%	29%	43%	29%	0%	N/A	N/A	N/A
41	To what extent do providers and staff at your practice site seem to agree that "total cost of care" contracts will become a major and sustained model of payment at your practice in the near-term (i.e., within five years)?	Strongly disagree (1) Disagree (2) Neither agree nor disagree (3) Agree (4) Strongly agree (5)	0%	0%	43%	57%	0%	N/A	N/A	N/A
42	What is your professional discipline? (select one)	 a. Primary care physician (1) b. Physician assistant/nurse practitioner (2) c. Registered nurse/nurse care manager/ LVN/LPN (3) d. Professional administrator (e.g., practice manager) (4) e. Other-please specify: (5) 	0%	0%	14%	86%	0%	N/A	N/A	N/A
43	How long have you worked at this practice site? (select one)	a. Less than 6 months (1) b. 6-12 months (2) c. 1-2 years (3) d. 3-5 years (4) e. More than 5 years (5)	29%	29%	0%	0%	43%	N/A	N/A	N/A
44	Did you ask a colleague for help in answering questions on the survey?	Yes (1) No (2)	29%	71%	N/A	N/A	N/A	N/A	N/A	N/A

APPENDIX IV: ACRONYM GLOSSARY

ACPP	Accountable Care Partnership Plan
ACO	Accountable Care Organization
ADT	Admission, Discharge, Transfer
BH CP	Behavioral Health Community Partner
СССМ	Care Coordination & Care Management
ССМ	Complex Care Management
СНА	Community Health Advocate
CHW	Community Health Worker
CMS	Centers for Medicare and Medicaid Services
CP	Community Partner
CWA	
DMH	Community Wellness Advocate
DSRIP	Department of Mental Health
ED	Delivery System Reform Incentive Payment
	Emergency Department
EHR	Electronic Health Record
ENS	Event Notification Service
EOHHS	Executive Office of Health and Human Services
FPL	Federal Poverty Level
FPP	Full Participation Plan
FQHC	Federally Qualified Health Center
HIE	Health Information Exchange
HIT	Health Information Technology
HRSN	Health Related Social Need
IA	Independent Assessor
IE	Independent Evaluator
JOC	Joint Operating Committee
KII	Key Informant Interview
LGBTQ	lesbian, gay, bisexual, transgender, queer, questioning
LCSW	Licensed Independent Clinical Social Worker
LPN	Licensed Practical Nurse
LTSS CP	Long Term Services and Supports Community Partner
MAeHC	Massachusetts eHealth Collaborative
MAT	Medication for Addiction Treatment
МСО	Managed Care Organization
MPA	Midpoint Assessment
OBAT	Office-Based Addiction Treatment
PCP	Primary Care Provider
PFAC	Patient and Family Advisory Committee
PHM	Population Health Management
QI	Quality Improvement
	Quality Management Committee

RN	Registered Nurse
SFTP	Secure File Transfer Protocol
SMI	Serious Mental Illness
SUD	Substance Use Disorder
SVP	Senior Vice President
SWI	Statewide Investments
TCOC	Total Cost of Care
VNA	Visiting Nurse Association

APPENDIX V: ACO COMMENT

Each ACO was provided with the opportunity to review their individual MPA report. The ACO had a two week comment period, during which it had the option of making a statement about the report. ACOs were provided with a form and instructions for submitting requests for correction (e.g., typos) and a comment of 1,000 word or less. ACOs were instructed that the comment may be attached as an appendix to the public-facing report, at the discretion of MassHealth and the IA.

Comments and requests for correction were reviewed by the IA and by MassHealth. If the ACO submitted a comment, it is provided below. If the ACO requested a minor clarification in the narrative that added useful detail or context but had no bearing on the findings, the IA made the requested change. If a request for correction or change had the potential to impact the findings, the IA reviewed the MPA data sources again and attempted to identify documentation in support of the requested change. If documentation was identified, the change was made. If documentation was not identified, no change was made to the report but the information provided by the ACO in the request for correction is shown below.

ACO Comment

Reliant Medical Group has reviewed the Independent Assessor's DSRIP Midpoint Assessment Report. We are very appreciative of the recommendations and will explore these opportunities to improve patient care. In review of the recommendations made, Reliant Medical Group would like to provide some clarifying comments pertaining to several of the areas referenced.

Reliant Medical Group does have an established Patient Family Advisory Council (PFAC) which meets quarterly and includes at least one Fallon 365 Care member. This council is chaired by Reliant's Chief Communication Officer who is a member of our organization's executive team. This council is relied upon for valued input regarding not only existing care but also potential programs, changes in patient flow, or any area(s) of care to allow for input on how any changes may impact the patients receiving care at Reliant.

The concept of CP communication is something the organization believes in and was part of the initial fabric of the design when initiating the integration of the CP program. Reliant Medical Group currently has a single point of contact for all CP related activities to ensure consistent communication amongst all the partners currently being used. This communication also allows for the bi-directional sharing of information, patient care conversations, and progress toward mutual goals.

In addition to maintaining processes, workflows, and staffing expertise and capacity to assist patients with accessing PT-1 benefits, over the course of the last six years Reliant Medical Group has also maintained a self-funded transportation fund designed to provide a viable option for patients who are not able to independently secure a reliable means of transportation to/from medical appointments. It has also been used for patients who were not able to access previously approved PT-1 related transportation secondary to an appointment being needed in a window short of the required notification period. This transportation fund has allowed patients, who otherwise might not have been able to attend appointments, the opportunity to continue to seek both acute, as well as continued, medical care. It has been a very successful project and is something the organization is committed to continuing.

Reliant Medical Group currently utilizes a combination of employed, as well as remote, translation and interpreter services for patients requiring, or requesting, translation/interpreter services as part of their care or care coordination. Many of our patient-facing documents (including our SDoH screening, as an example) have been successfully translated and are used for patients/families as needed.

The final area of comment relates to the development of 1:1 relationships with high risk members. Reliant agrees the establishment of this level relationship with patients is a key to being able to successfully assist with the varying level of need(s) a patient may have. While Reliant Medical Group does not currently utilize secure text messaging it is something that has been discussed internally. Reliant's

Population Health department currently utilizes a predictive modeling system that allows care management staff to individualize their outreach efforts not only based upon the current needs of the respective patient but also based on the potential future risk of that specific patient. This proactive and frequent contact allows for relationships to be developed but also gives the patient a consistent healthcare professional to contact if/when an acute issue arises. It is these longitudinal, and individualized, relationships that have resulted in many patients showing improvement in not only their healthcare outcomes but also in their self-reported quality of life.
