HPV VACCINE: Long-Lasting Cancer Protection

Vaccination prevents over

of cancers caused by HPV.

HPV stands for human papillomavirus.

HPV is so common that nearly everyone gets it at some point.

It can be passed with no signs or symptoms.

It dramatically increases the risk of serious cancer, in both men and women.1

The HPV vaccination rate is just

of girls completed their **HPV** vaccination

series in 2017.

of **boys** completed their **HPV** vaccination series in 2017.

Most Common Cancers Caused by HPV

Cervical cancer occurred in

> women per year.

Throat cancer occurred in

people per year.

The HPV vaccine offers **future cancer** protection for boys and girls.

Caused by HPV:

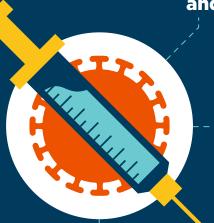

- THROAT
- CERVICAL
- VAGINAL
- VULVAR
- PENILE • ANAL*

*Includes anal and rectal squamous cell carcinomas.

Earlier Vaccination is Better

Two doses of HPV vaccine are recommended for girls and boys ages 11-12.

However, the twodose series can be started as early as age 9.2

Teens and young adults (15-26) can still receive vaccination, but will require three doses.3

Consult your healthcare provider for more information.
