

As a resident of cape and a public citizen,I would like to express my support of the ocean management task force .The state of Massachusetts should be able to decide on matters so crucial to its economy and protect its invaluable natural resources enjoyed by so many from the greed of private developers.Federal land should not be up for grabs for individual profit.Caoewind is trying to capitalize on a loophole of legislation on both the state and federal level.I believe in the formation of the Massachusetts Ocean Resource Management Act to regulate and protect our natural resources.The negligible amount of energy produced by the industrial plant consisting of wind towers is neither econonically sound nor beneficial to anyone except CapeWind. Our sound is not for sale.
