## MANDATORY REPORT OF LEGAL BLINDNESS

The Massachusetts Commission for the Blind is required by law to maintain a register of the blind in the Commonwealth. Under Chapter 6 – Sec. 136 of the General Laws, institutions, physicians, oculists, and optometrists are required to report within 30 days all cases of legal blindness.

- 1. All cases where vision with correction is 20/200 or less in the better eye.
- 2. All cases regardless of visual acuity if the visual field is reduced to a radius of 10° or less.

\*\*PLEASE TURN OVER FOR FIELD CHARTS

## \*\*FIELD OF VISION

Determine extent of peripheral visual field of each eye. Record results on chart below or attach automated visual field charts. \*\*For visual field testing, the following measurements can be used:

- Automated static threshold perimetry (Humphrey 30-2 and 24-2) a. For Humphrey Field Analyzers, a 10dB stimulus is equivalent to a 4e stimulus. A dB level that is higher than 10 represents a dimmer stimulus, while a dB level that is lower than 10 represents a brighter stimulus. Therefore, for automated static threshold tests performed on Humphrey Field Analyzers, any point seen at 10dB or higher are a point that would be seen with a 4e stimulus
- Kinetic perimetry, such as the Humphrey "SSA Test Kinetic" a. The kinetic test must use a white III4e stimulus projected on a white 31.5 apostilb (10 cd/m2) background
- Goldmann perimetry With a III4e target
- Confrontation testing
