As a local resident, I support Mass General Brigham's project to provide the same healthcare I receive today in Boston closer to my home. We need more access to care in our community – especially behavioral health, which this site will provide.

The project will also provide much needed jobs, including 300 union construction jobs and 200 permanent jobs, that will help our local economy emerge from the pandemic.

I support the Mass General Brigham project and ask the Department of Public Health to approve this application.

I support Mass General Brigham's project to provide the same healthcare that I currently receive in Boston closer to my home. We need more access to care in our community – specialists, labs, and radiology sites.

It's critical to have MGB healthcare options available within our community, and provide jobs for local residents who do not have access to transportation into Boston.

I support the Mass General Brigham project and ask the Department of Public Health to approve this application.

As a local resident and Mass General Brigham employee, I believe that it is important for us to be accessible to our patients and to a broader community. COVID 19 has shown us how important it is for people to have access to care and for the hospital to have a better understanding of the people in the community. That can only be achieved if hospitals can just not deliver care but also provide research and technology which comes from one of the premier healthcare systems in the country.

As a local resident and Mass General Brigham employee, I believe our relationship with our patients is at the heart of the healthcare experience – for patients, their communities, care team members, and employees.

Understanding our patients' personal stories and building a lifelong relationship is crucial to making healthcare less complicated, less fragmented, and less costly.

Our response to COVID-19 is an example of how a coordinated approach can result in better access. I support this project, and I am looking forward to working with Woburn and the surrounding communities to ensure that Mass General Brigham that uses our people, research, and technology to meet the needs of our patients.

As a local resident and Mass General Brigham employee, I believe our relationship with our patients is at the heart of the healthcare experience – for patients, their communities, care team members, and employees. With respect to this, as well as all of the changes to work lives, home lives, and healthcare accessibility from the COVID-19 pandemic, it would be important to make our high-quality, specialized care available outside of the downtown campus.

Understanding our patients' personal stories and building a lifelong relationship is crucial to making healthcare less complicated, less fragmented, and less costly.

Our response to COVID-19 is an example of how a coordinated approach can result in better access. As a local resident and Brigham and Women's Hospital employee (37 years), I am hoping that the Mass General Brigham Health Center will come to fruition in Woburn. Despite coming to the hospital for work every day, my biggest challenge is finding and organizing providers in the Middlesex area for my own care. Accessing a primary care physician has been incredibly challenging. Being able to schedule routine procedures, like a colonoscopy, requires a lot of work, connecting what appears to be disconnected providers and disconnects of information.

I am hoping to be able to go to one (1) location for all my health needs.

I am hoping to establish relationships with world class providers (I see them in action every day).

I am hoping to find this care in the area I live.

I am hoping my healthcare can be made simpler.

I am hoping I can do this for my family members as well.

John

Also I would like to add..... I have been a Partners patients and now a MGB patient as well as employee since I worked in the kitchen at Lynn Union Hospital when I was 17, I am now a Thoracic ICU nurse at the Brigham Main Campus. Having my Medical professionals close to my home and available in my community has been of tremendous benefit. Whether it is myself or my 104 year old grandfather receiving care knowing that the potential of having MGB quality care closer to home is amazing. And also having MEEI close is like covering all bases.

Hello,

This is a great initiative. I would like to see ambulatory care that will include specialty care from cardiologists, infection disease, ortho, physical therapy etc. I would like to see diagnostic GI, breast clinic and women's center to be part of the ambulatory center. Lastly, we want to bring the best of Brigham employees to this ambulatory center.

Thanks.

Mass General Brigham needs to focus on paying their admin staff a living wage before they continue to expand. How does this company afford to expand but yet admin staff have not had a market adjustment in years like nursing and other clinical have. They are creating a monopoly on health care especially in this area while brining in more profits with no pay increase for their staff. They need to focus on their local problems like salary adjustments and parking. They take away our bonuses due to "covid" but have money to expand more and more. MGB has plenty of sites like Waltham, Chelsea, Everette, Some on Cape cod, Martha's Vineyard etc. How are elected officials going to let one health care entity take over most of the state. Woburn is already very close to MGB facilities. I completely disagree with any expansion or dumping money into ads etc. millions of dollars while still trying to pay admin assistants (people who risked their own health going in to work during covid) 15 dollars an hour. It's disgraceful. MGB is committed to making money but staying a "non profit" more expansion gives them more power. I work for this company and am disgusted by this. Looks like they didn't have enough for our \$200 Thanksgiving bonus but enough to build 3 more centers. I say no

As a local resident and Mass General Brigham employee, I fully support the Mass General Brigham proposed health care center in Woburn. I have been an employee at the Mass General North Shore Center for Outpatient Care in Danvers for nearly 4 years now and see firsthand how a community based ambulatory care center can greatly serve a community. Having a quality, multi-disciplinary health care facility within one's own community, without the need to travel into Boston and in a lower cost ambulatory setting, is crucial to making healthcare less complicated, less fragmented, and less costly.

A new Mass General Brigham Woburn ambulatory care center will increase local jobs and health care access to so many people. I believe our relationship with our patients is at the heart of the healthcare experience – for patients, their communities, care team members, and employees.

Our response to COVID-19 is an example of how a coordinated approach can result in better access. I support this project, and I am looking forward to working with Woburn and the surrounding communities to ensure that Mass General Brigham uses our people, research, and technology to meet the needs of our patients.

As a local resident and Mass General Brigham employee, and patient, I have witnessed the highest quality of care being provided by our member institutions from both 'inside' and 'outside' the office. I believe that this facility will be a great contribution to the community, as it will offer easier and better access to hundreds of thousands of patients (if not millions), to high quality healthcare options. I would encourage the community to ask MGB to provide an additional emphasis on behavioral healthcare services at this facility, as they are greatly needed in our area, alongside physical care. I would also expect that these facilities will continue to further the reach of the Mass General-Brigham administration, in both teaching of future healthcare leaders and in research.

Thank you for considering my comments,

As a local resident, I support Mass General Brigham's project to provide the same healthcare I receive today in Boston closer to my home.

When I lived in the Waltham area I had countless local options for receiving Mass General Brigham's world-renowned care in my suburb community. Since moving to Burlington 11 years ago, one of the things that I have consistently missed has been having Mass General Brigham facilities conveniently located near me. I was forced to switch providers and networks, out of necessary convenience, and I have done so multiple times. I have been unable to find the same quality and reliable care that I had known when I was a Mass General Brigham patient, and I have a strong interest in having the Mass General Brigham network brought to Woburn so that I can once again leverage their services.

I support the Mass General Brigham project and ask the Department of Public Health to approve this application.

As a local resident and Mass General Brigham employee, I believe our relationship with our patients is at the heart of the healthcare experience – for patients, their communities, care team members, and employees.

I support this project as I believe a new Mass General Brigham facility in Woburn would improve the quality of care for people living on the north shore and north western communities of Massachusetts as well as New Hampshire. One thing we've learned from COVID is we need streamlined, accessible and collaborative care and going into Boston can be challenging, particularly for underserved populations. While the MGB facilities in Danvers meet these needs to some extent, the breadth of service delivery would be enhanced with a site in Woburn. Given the critical need of behavioral health in the upcoming years and the dire availability of behavioral health in the north shore and north west areas of Greater Boston, I see the tremendous need and opportunity.

As a local resident and Mass General Brigham employee, I support the development of an outpatient treatment center in Woburn as it would provide a large cohort of the MGB patient population with services which are more accessible. As a social worker, I have seen positive health/mental health outcomes for patients when care has been made more accessible.

As a local resident and Mass General Brigham employee, I believe our relationship with our patients is at the heart of the healthcare experience – for patients, their communities, care team members, and employees.

Understanding our patients' personal stories and building a lifelong relationship is crucial to making healthcare less complicated, less fragmented, and less costly.

Our response to COVID-19 is an example of how a coordinated approach can result in better access. I support this project, and I am looking forward to working with Woburn and the surrounding communities to ensure that Mass General Brigham that uses our people, research, and technology to meet the needs of our patients.

I am so happy that there will finally be a Mass General Brigham's facility here in Woburn. It will be a great opportunity for Woburn to be a place that not only attracts a high caliber medical facility but it will also draw in more people to the area to live as many people like to live close to work and there is an abundance of housing opportunity here in Woburn

As a local resident and Mass General Brigham employee, I am looking forward to having a MGB facility within close proximity to my home for my family. Our current alternatives are Danvers and Boston, which are both a considerable distance. As Cancer Survivors, it would of been a much easier commute for chemotherapy and radiation treatments. I am looking forward to getting quality care at a facility within easy proximity to us.

I am a local resident of the Stoneham and Woburn area and I'm excited for the proposed ambulatory care center in Woburn. Besides the urgent care, there are not many Mass General healthcare facilities in the area. I'm hoping to see primary care and full imaging services at the Woburn campus. It will be so much more convenient for patient's living north of the city.

In conclusion, I support this project. I will welcome MGB to our community with open arms!

Setting up clinics like these outside of Boston will support families that are not able to travel into the city and also greatly reduce the congestion that exists around various health centers in the middle of the day trying to get to appointments. In addition, cost of parking can be a burden for patients, and establishing these affordable locations will be welcome.

Sincerely,  
Samantha R.

This facility is needed to allow access to the densely populated area just north of Boston. Many of these patients lack transportation and access to the medical care in Boston and this will allow more patients to have access to the top specialists in Boston without having to worry about traffic into the city, parking costs, navigating through a large hospital to a clinic, etc. I have worked in primary care outside of the city and there is also a need for improved access to wound care clinics and mental health clinics and it would be wonderful if this facility could help fill that void.

On a personal note: I am also a patient of Mass General Brigham, and would greatly prefer to receive ambulatory care in a setting like the proposed Woburn facility which is close to home. I currently have to spend time and money to go into the city for primary and specialty care, which has occasionally been a deterrent to seeking care. It would be considerably more efficient and cost-effective to receive this care closer to home.

As a local resident and Mass General Brigham employee, I believe our relationship with our patients is at the heart of the healthcare experience – for patients, their communities, care team members, and employees.

Understanding our patients' personal stories and building a lifelong relationship is crucial to making healthcare less complicated, less fragmented, and less costly. I see everyday the quality care that we, as MGB staff, provide to our patients. We would like to receive the same quality and enhanced treatment that so many others receive as a resident near the Woburn area. Having good care that is close to home eases the burden of travelling to Boston or to the North Shore to receive the same care we give to others. This would be helpful for families with small children, older parents and the working population to have access to the best care around. The Woburn and surrounding communities deserve the option to choose the correct and appropriate healthcare system for themselves.

Our response to COVID-19 is an example of how a coordinated approach can result in better access. This pandemic has made many of us take a look at the healthcare system in general. I always, as a MGB employee, felt supported and comfortable going to work each day which in turn eased the worry of my family. This support provided me the courage to get through the most challenging time in my career. I support this project, and I am looking forward to working with Woburn and the surrounding communities to ensure that Mass General Brigham that uses our people, research, and technology to meet the needs of our patients.

I am in favor of a local facility outside of the city of Boston for health care. As I age, the thought of having to go into a large city for health care is overwhelming. Though I live close to Boston, I have chosen to receive health care away from the city due to the traffic and parking concerns. Having a facility in Woburn would alleviate these worries.

As a local resident and Mass General Brigham employee, I believe community connection is an important part of delivering healthcare. This is important to me as an Mass General Brigham employee and more so, as a patient. Having a Mass General Brigham ambulatory care center in Woburn would be a great asset to me and my family. Since the the Lahey Clinic recent merger with Beth Israel, patient choice in this area has become limited. Wanting my care close to home is important to me and my family. Currently, my care is fragmented. My PCP is Mass General Brigham, yet to stay close to home imaging and other provider services need to be done at non Mass General Brigham facilities. This feels unfamiliar, inconvenient and at a higher cost. If I want to stay within my choice for my healthcare, I need to travel. Doing so is also inconvenient and at a cost to me.

I support this project 100%.

Thank you,

Donna Fernandez

On a personal level, I currently utilize MGB affiliated physicians well outside my living area. My kids see a pediatrician in Wellesley, over 30 minutes away from where we live currently. My dermatologist is based in Danvers at the outpatient clinic there. My PCP is at Newton-Wellesley hospital, again roughly 30 minutes away. Having the ability to see providers much closer to home is so important to me. I don't like traveling into Boston for care so it's either that or go to these alternate providers that are very far away. Having this facility in Woburn will greatly enhance our quality of life and make it easier for not only myself but my family too.

As a local resident, I support Mass General Brigham's project to provide the same healthcare I receive today in Boston closer to my home. We need more access to care.

I only support this if you DO NOT tax the local EMS systems in the area. The abuse of 911 by current "urgent cares" is creating a worse situation in this area due to a shortage of Ambulances and or Paramedics. Consider contracting with a private ambulance service that can meet your needs..

The project will also provide much needed jobs, including 300 union construction jobs and 200 permanent jobs, that will help our local economy emerge from the pandemic.

As a local resident, I support Mass General Brigham's project to provide the same healthcare I receive today in Boston closer to my home. We need more access to care in our community – especially behavioral health, which this site will provide.

The project will also provide much needed jobs, including 300 union construction jobs and 200 permanent jobs, that will help our local economy emerge from the pandemic.

I support the Mass General Brigham project and ask the Department of Public Health to approve this application.
