

## Virtual Design Public Hearing Bridge Replacement, F-02-114 (C0X), Jefferson Street over Sucker Brook' Fall River, MA

### What is happening?

The proposed purpose of the project is to address the structurally deficient bridge, which will continue providing multiple access points for vehicular traffic and more importantly emergency responders to the industrial park on the other side of Sucker Brook. This project involves the replacement of the existing one-lane bridge with a two-lane bridge. Replaces the existing failing retaining wall, including the addition of a new sidewalk, and reconstruction of the roadway approaches.

### How will this affect you?

The project area encompasses approximately 380-feet of Jefferson Street in Fall River, MA. The proposed project consists of bicycles accommodation by way of proposed 2-foot-wide shoulders. Pedestrian accommodation consists of the addition of a 6-foot sidewalk to one side of the road in an area of relatively low pedestrian usage.

This is an opportunity in the preliminary design process (25% design) for the public to learn about and comment on the selected bridge type and detour. For those unable to attend the virtual meeting the virtual Design Public Hearing be recorded. The video will be posted to the study website at [www.mass.gov/orgs/highway-division/events](http://www.mass.gov/orgs/highway-division/events) after the event.

### When

Tuesday, April 21, 2026  
6:00 P.M.

### Attend
