Massachusetts Port Authority Employees' Retirement Board One Harborside Drive, Suite 200S East Boston, MA 02128-2909

Dear Members of the Board:

Stone Consulting, Inc. has performed a January 1, 2023 actuarial valuation of the Massachusetts Port Authority Employees' Retirement System (MPAERS, the System). This valuation and report were prepared using generally accepted actuarial principles and practices. To the best of our knowledge, this report is complete and accurate, and the assumptions used were chosen by the Retirement Board in conjunction with Stone Consulting Inc.'s recommendations. We believe the assumptions represent a reasonable estimate of anticipated experience of the system. The assumptions and methods used for funding purposes in this valuation meet the parameters set by the Actuarial Standards of Practice as set forth by the Actuarial Standards Board.

As part of performing the valuation, Stone Consulting, Inc. was furnished member data by the administrative staff of MPAERS. Although examined for general reasonableness, the data was not audited by the actuary. In addition, the administrative staff furnished financial statements that were not audited by the actuary or by the plan's auditors.

This report was prepared using our proprietary valuation model and DBVAL version 12.24. In our professional judgment, this software has the capability to provide results which are consistent with the purposes of the valuation. Output from the software is tested to ensure that the model reasonably represents that which is intended to be modeled. The valuation output is prepared and analyzed using proprietary Excel spreadsheets followed by a final review by an actuary.

Stone Consulting, Inc. prepares an actuarial valuation of the MPAERS annually. This satisfies the requirements under Chapter 32 of the Massachusetts General Laws.

The funding objective of the plan is to provide for the current cost of benefits (i.e., normal cost) as a level percentage of payroll over time and this objective is currently being realized. The employer contribution rate is determined by adding the normal cost plus a level dollar amortization of the frozen entry age liability. The normal cost is projected to remain at a level percentage of payroll. While the statute which created the MPAERS did not anticipate the effect of assumption or plan changes on the funding schedule, we have amortized these effects over 20 years, consistent with the original amortization period contained in the Enabling Act of the Massachusetts Port Authority Employees' Retirement System (Enabling Act).

MPAERS experienced investment losses in calendar 2022. Net of investment expenses, the actual return on the market value of assets was -14.38% as compared to the prior valuation's expected return of 6.75%; the return on the actuarial value of assets was 5.83%. The Massachusetts Port Authority (Authority)'s FY 2024 (7/1/2023) contribution of \$11,438,885 is \$3,098,453 more than the Authority's FY 2023 contribution and \$3,538,885 more than the expected contribution based upon last year's actuarial valuation. The increase is mainly due to investment losses.

Prepared and included in the actuarial valuation report for use in the Actuarial Section of the Annual Comprehensive Financial Report are the following:

- Schedule of Active Member Valuation Data;
- Schedule of Retirees and Beneficiaries Added to and Removed from Rolls;
- Solvency Test; and
- Schedules of Funding Progress.

Additionally, for use in the Statistical and Financial sections for the Annual Report, we have included and prepared the following:

- Distribution of Plan Members;
- Schedule of Average Benefit Payments; and
- Schedule of Benefit Recipients by Type and Option.

We are pleased to present the results of this valuation. If the MPAERS Board has any questions on the content of this report, we would be glad to respond. Please note that this report is meant to be used in its entirety. Use of excerpts of this report may result in a misleading or inaccurate understanding of the results.

The undersigned are consultants for Stone Consulting, Inc. and are members of the American Academy of Actuaries; they meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained herein.

Respectfully submitted, STONE CONSULTING, INC. Actuaries for the Plan

Joan Moreau, ASA, FCA, MAAA Member, American Academy of Actuaries

Colin Edgar, ASÀ, MAAA Member, American Academy of Actuaries

Percentages in the right column above reflect change since the January 1, 2022 Valuation. <u>Note</u>: Amounts shown in this report may not total due to rounding

Funding Schedule

The funding schedule is based on the Frozen Entry Age Actuarial Cost Method, consistent with the requirements of Section 2 of Chapter 487 of the Acts of 1978. The funding schedule is composed of the normal cost, the amortization of the initial unfunded liability, and the amortization of the liability associated with plan changes such as early retirement incentives, actuarial assumption changes, and asset valuation method changes.

The increase in contribution associated with asset losses was offset in part by recognition of asset gains from prior years, the result of using an asset smoothing method which periodically recognizes asset experience over five years. The market value of assets investment return was -14.38%, and the actuarial value investment return was 5.83%. There were approximately \$105 million in unrecognized actuarial asset gains as of the prior valuation; \$25.3 million of that was recognized this year along with \$38.4 million of this year's loss of \$192.0 million. The details of the asset smoothing method are shown later in the report.

The breakdown of the funding schedule appropriation is as follows:

Net Employer Normal Cost including interest	\$ 2,700,063
Amortization including interest	<u> </u>
Sum of Net Normal Cost and Amortization	\$ 11,438,885
Employer Contribution (Not less than zero)	\$ 11,438,885

The details of the calculation of the normal cost and the amortization are shown in later sections of the report.

Valuation Assumptions and Methodology

The main economic actuarial assumptions used in this valuation were consistent with those used in the January 1, 2022 valuation, with the exception of an additional 2% COLA increase granted for FY23. Valuation assumptions included the following:

- Interest Rate: The interest rate assumption is 6.75%. The interest rate is used to project earnings on assets and to discount the value of future liabilities to the present day. The investment return assumption is a long term assumption and is based on capital market expectations by asset class, historical returns, and professional judgment. Analysis prepared by Wilshire (MPAER's investment advisor) and other investment consultants was considered, using a building block approach which included expected returns by asset class, risk analysis, and the determination of a 30-year projected target rate of return.
- Salary Assumption: The salary increase assumption is 4.25%. It reflects prior experience, current
 expectations and professional judgement.
- Pension Adjustment Base and Pension Adjustment: This valuation assumes that the Board will annually grant a 3% pension adjustment to retirees for the first \$14,000 of benefits going forward, following a 5% increase for FY23.
- Asset-Smoothing Methodology: The Massport Retirement Board uses an asset-smoothing methodology as part of the actuarial valuation. This methodology is used to lower the potential volatility of retirement contributions by smoothing investment gains and losses. Asset gains and losses in excess of the interest rate assumption are recognized over a period of 5 years. The result of this smoothing is called the actuarial value of assets and is used in calculating the valuation results. The actuarial value of assets must be between 85% and 115% of the market value of assets. This ensures that the actuarial value of assets is valued within reasonable bounds of market value. The above range is referred to as a 15% corridor.
- Mortality Table: The mortality table is the Pub-2010 Table (Sex-Distinct) projected with MP-2021 Generational Mortality. This assumption is based on the results of a study of the MPAERS' mortality experience for 2010 through 2019, dated July 12, 2022.
- Vacation Buyback Effect: Vacation Buybacks were not assumed to be regular compensation and were not considered in the calculation of future retirement benefits.
- Calculation of 3(8)(c) Liability: The calculation assumes no COLA increases on 3(8)(c) payments.
- Other Assumptions: Withdrawal, disability and retirement rates are the same as the prior valuation.
- Contribution Timing: Contributions into the plan are assumed to be made as of July 1.

The main actuarial assumptions used in the valuation are summarized below. The additional COLA for FY23 increased benefits by \$251 thousand and increased both the Present Value of Future Benefits and the Actuarial Accrued Liability by \$2.5 million.

Assumption	January 1, 2023 Valuation
Interest Rate	6.75%
Salary Increase	4.25%
Pension Adjustment Base	\$14,000
Pension Adjustment	5.00% on the lesser of the Retirement Allowance and the Pension Adjustment Base for FY23, 3.00% for future years
Retirement	
Hired prior to April 2, 2012	
Group 1	Age 50-70 and 10 years of service
Group 2	Age 50-65 and 10 years of service
Group 4	Age 50-65
Hired after April 1, 2012	
Group 1	Age 60-70 and 10 years of service
Group 2	Age 55-65 and 10 years of service
Group 4	Age 55-65
Administrative Expense	Estimated budgeted amount: \$1,527,000

Assets

We were furnished with a copy of a draft of the System's annual financial report by the Board's administrative staff. The draft financial report was not audited by Stone Consulting, Inc. or the System's auditors. The market value of assets was \$766,073,097 as of December 31, 2022. Assets were invested 49% in equities and pooled domestic and international equity funds, 24% in fixed income, cash, payables, receivables and interest accrued, 9% in real estate funds, with the remaining 18% in alternative investments (opportunistic credit and private equity).

The following is a breakdown of the market value of assets by category:

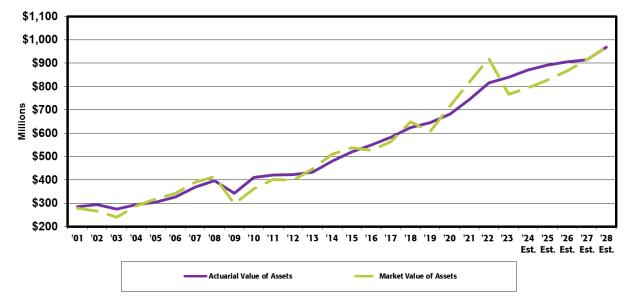

a.	Cash	\$ 1,112,752
b.	Equities	11,347,461
c.	Pooled Domestic Equities Funds	166,941,678
d.	Pooled International Equities Funds	199,312,874
e.	Pooled Domestic Fixed Income Funds	182,173,305
f.	Opportunistic Credit	41,011,025
g.	Pooled Alternative Investments Funds	93,500,926
h.	Pooled Real Estate Funds	<u> </u>
i.	Subtotal	\$ 764,314,411
j.	Interest Due and Accrued	\$ 20,573
k.	Accounts Receivable	2,822,552
I.	Accounts Payable (includes additional COLA for FY23)	(1,082,403)
m.	Right of use Asset	264,952
n.	Lease liability	(266,988)
0.	Subtotal	\$ 1,758,686
p.	Market Value of Assets [(i) + (o)]	\$ 766,073,097

The actuarial value of assets as of December 31, 2022 is \$839,625,273. The actuarial value of assets reflects the use of an asset-smoothing technique. The difference between the actual return and the expected investment return is phased in equally over five years. Applying asset-smoothing is intended to minimize the effect of short-term fluctuations in the market value of assets. To ensure that the actuarial value of assets is not too dissimilar from the market value of assets, we employ a 15% corridor. The actuarial value of assets must be within 15% of the market value of assets. The corridor did not affect the actuarial value of assets this year. The rate of return on the actuarial value of assets was 5.83% during 2022.

stoneconsulting,inc

The actuarial value of assets is \$73.6 million more than the market value of assets. Under the current method, this difference will be recognized over the next 4 years. Based on the investments returning 6.75% in calendar 2023, we anticipate that next year's actuarial value of assets will be \$76.0 million higher than market value. If the market value of assets method was used the contribution would be \$19.0 million for Fiscal 2024.

The chart below shows the effect of the asset smoothing. We have compared the actuarial value of assets to the market value of assets from 2001 to the present with estimated values for 2024 through 2028. As the chart illustrates, the asset smoothing method has been successful in lowering the volatility of the assets used for the actuarial valuation.

The calculation of the actuarial value of assets is shown in the Summary of Valuation Results in Section II of the report.

Analysis of Valuation Results

The Frozen Entry Age Actuarial Cost Method does not explicitly recognize actuarial gains or losses. Actuarial gains or losses are spread over the future working lifetime of active members as part of the normal cost. Therefore, an actuarial loss would increase the normal cost while an actuarial gain would lower the normal cost. For informational purposes, we have calculated an actuarial loss for 2022 of \$13.7 million as shown on page 20. The major component of the actuarial loss was due to investment losses of \$192.0 million for 2022. The asset gain/loss is calculated by comparing actual values to those projected based on the January 1, 2022 valuation and its asset return assumption of 6.75%.

The chart on the following page shows the sources of gain/loss under Entry Age Normal as opposed to Frozen Entry Age.

Source	Gain/(Loss) 2022	Gain/(Loss) 2021	Gain/(Loss) 2020	Gain/(Loss) 2019	Gain/(Loss) 2018	Gain/(Loss) 2017	Gain/(Loss) 2016
<u>Actives</u>							
Withdrawal	\$0.7M	\$4.8M	\$0.2M	\$3.6M	\$3.9M	\$5.4M	\$3.9M
Mortality	\$0.6M	\$2.1M	\$0.6M	\$0.6M	\$0.5M	\$0.5M	\$0.3M
Disability	\$1.1M	\$1.3M	\$1.1M	\$1.0M	\$1.0M	\$1.0M	\$0.7M
Retirement	\$(0.9)M	\$4.5M	\$(2.9)M	\$(0.04)M	\$(1.8)M	\$(1.5)M	\$(1.3)M
Salary	\$(3.5)M	\$15.9M	\$(7.6)M	\$(3.3)M	\$0.5M	\$(1.5)M	\$8.2M
<u>Retirees</u>							
Mortality	\$(0.9)M	\$(0.3)M	\$3.7M	\$4.4M	\$0.6M	\$(1.3)M	\$(1.9)M

The normal cost development for 2023 is shown on page 17. A comparison of normal costs from 2020 to 2023 is shown on page 18. The present value of future normal costs has increased by \$22.6 million from 2022, following a \$50.0 million decrease in the prior year. The gross normal cost rate increased from 9.27% of pay in 2022 to 10.63% in 2023. The net normal cost is adjusted with interest from January 1 to July 1. Anticipated administrative expenses of the System are added to the adjusted net normal cost. The administrative expenses exclude custodial and investment manager expenses as these are reflected in the interest assumption that is net of these fees. Administrative fees increased from \$1,482,000 to \$1,527,000.

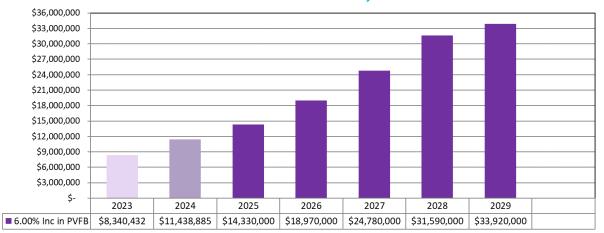

The employer retirement contribution is composed of two parts: the adjusted net normal cost with administrative expenses and an amortization of any changes in the liability (measured using the entry age actuarial funding method) due to changes in assumptions or methodologies or benefit provisions. These changes are amortized over 20 years to be consistent with the Massachusetts Port Authority Employees' Retirement System's Enabling Act.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions, changes in economic or demographic assumptions, increases or decreases expected as part of natural operation of the methodology used for these measurements such as additional contribution requirements based on the plan's funded status, and changes in plan provisions or applicable law.

We have calculated projections assuming the present value of future benefits increases each year by 6%. This estimates that the contribution level for 2025 will increase by \$2.9 million compared to 2024, followed by increases of \$4.6 million in 2026, \$5.8 million in 2027, \$6.8 million in 2028, and \$2.3 million in 2029. The expected increases are driven largely by the continued recognition of asset losses in subsequent years. Note that these projections may be significantly affected by future liability and investment experience.

The chart below illustrates the contribution projection discussed above.

Contribution Projection

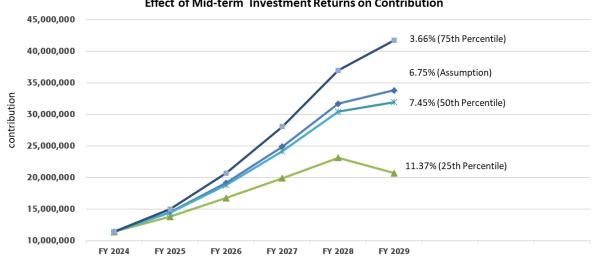

The Frozen Entry Age Actuarial Cost Method has been used in this valuation as required under the Enabling Act. This funding method does not separately value past service liabilities so we are unable to show how well funded the plan is in comparison to liabilities in a meaningful way under this method. A common measure used to illustrate plan funding is the funding ratio. The funding ratio compares the actuarial value of assets to the actuarial accrued liability. We have calculated a funding ratio of 96.8% using the Entry Age Normal Actuarial Cost Method (EAN). If the market value of assets was used the funding ratio would be 88.3%. The EAN method is used by almost all Chapter 32 Retirement Systems and has been shown for illustration purposes only. This shows that the plan is well-funded compared to other Massachusetts public sector retirement systems.

Risk

The effect of different future investment returns can result in widely varying levels of funding as well as on contribution requirements.

The following chart projects the contribution requirement based on 25th to 75th percentile expected investment earnings over the next five years. These returns were provided by the MPAERS's investment adviser, Wilshire. This chart illustrates the volatility of the contribution requirements. Note that 50% of possible scenarios lie outside of the 25th-75th percentile range. So the potential for even more extreme results is a distinct possibility.

Effect of Mid-term Investment Returns on Contribution

The above contribution projection is based on Wilshire 5-year quartiles for market value returns for calendar years 2023 through 2027. Due to asset smoothing, unrecognized gains and losses remaining after the years shown would range between \$91 million in gains to \$49 million in losses.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as:

- Plan experience differing from that anticipated by the economic or demographic assumptions, •
- Changes in economic or demographic assumptions,
- Increases or decreases expected as part of natural operation of the methodology used for these • measurements such as additional contribution requirements based on the plan's funded status,
- Changes in plan provisions or applicable law.

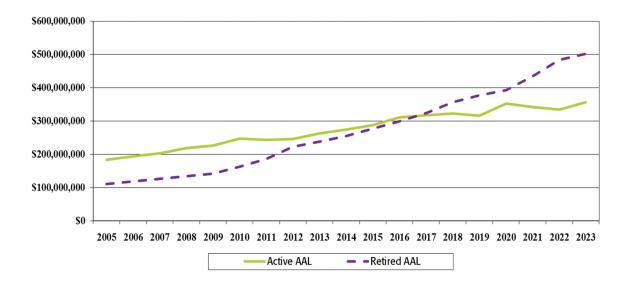

As part of the valuation, we have not performed an analysis of the potential range of future measurements. GASB Statement 67 and 68 reports for the Massachusetts Port Authority Employees Retirement System (MPAERS) contain alternate results to measure the impact of increases or decreases in the discount rate.

Maturity

One important concern is the maturity of the system. Systems with a greater portion of their liability stemming from current retirees whose benefits are already being paid are likely to experience greater impact from short-term asset experience, as high payouts in the near future means less of the current assets will be available to benefit from investment returns further in the future.

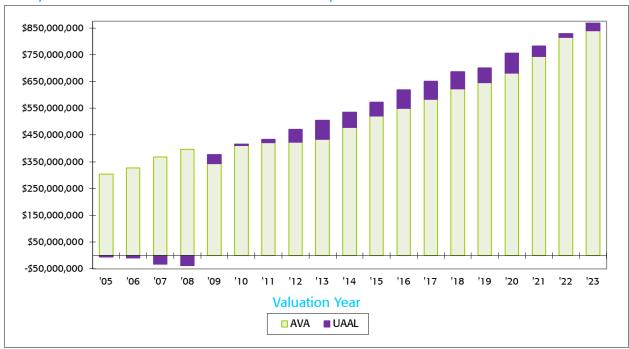

The graph below compares the history of the accrued liability for active employees and retirees. The retiree share of the accrued liability for MPAERS has grown steadily and significantly since 2005.

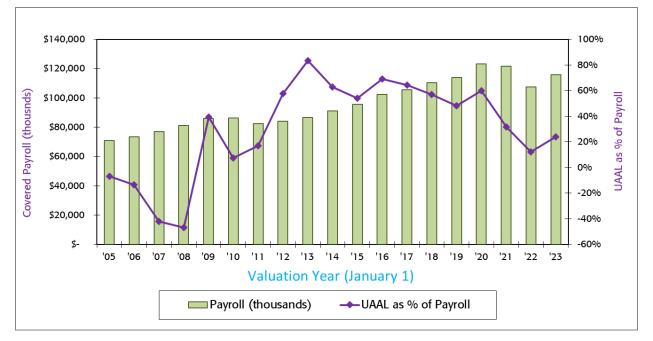

Historical Experience

The following chart displays MPAERS's history of Actuarial Assets and Unfunded Entry Age Actuarial Accrued Liability (UAAL); the second chart compares the UAAL to payroll.

History of Assets and Unfunded Actuarial Accrued Liability

History of Unfunded Actuarial Accrued Liability and Payroll

Breakdown of Present Value of Future Benefits

Derivation of Experience Gain or (Loss)

1.	Normal Cost Rate Last Year	9.27%
2.	Normal Cost Rate This Year	10.63%
3.	Increase (Decrease) in Normal Cost Rate (2-1)	1.36%
4.	Actuarial Present Value of Future Salaries	\$1,197,690,286
5.	Increase (Decrease) in Actuarial Present Value of Future Normal Cost (3 x 4)	\$16,283,615
6.	Increase (Decrease) due to Change in Assumptions, Benefits and Methods	\$2,537,888
7.	Net Actuarial Gain/(Loss) [6-5]	(\$13,745,727)

Analysis of Financial Experience

The Frozen Entry Age Actuarial Cost Method does not explicitly recognize actuarial gains or losses. Actuarial gains and losses are spread over the future working lifetime of the active members as part of the normal cost. Therefore, an actuarial loss would increase the normal cost as a percentage of payroll while an actuarial gain would lower the normal cost as a percentage of payroll.

Gross Normal Cost as a Percentage of Payroll (prior to Employee Contributions and Expenses)

	1/1/2022	1/1/2023
Prior Year's Gross Normal Cost (1/1/2021, 1/1/2022)	13.71%	9.27%
Increases/(Decreases) due to:		
 Liability experience 	(2.23%)	0.72%
 Investment experience 	(3.25%)*	0.64%*
 Changes in benefits, assumptions and methods 	1.04%	0.00%
Total	(4.44%)	1.36%
Current Valuation	9.27%	10.63%

*Includes recognition of previously deferred gains and losses.

Calculation of Valuation Assets as of January 1, 2023

5-YEAR PHASE-IN OF ASSET GAINS AND LOSSES

- 1. Market value of assets including receivable/payable as of January 1, 2023 \$766,073,097
- 2. Phase-in of asset gains and losses

Disclosures

- Stone Consulting, Inc. was furnished member data by the administration staff of the MPAERS. Although examined under broad parameters for reasonableness, the data was not audited by the actuary. In addition, the administrative staff furnished financial statements that were not audited by the actuary or by the plan's auditors. With the assistance of the staff of MPAERS, we were able to develop a database sufficient for valuation purposes.
- The investment return assumption is a long-term assumption and is based on capital market expectations by asset class, historical returns, and professional judgement.
- Historically, 7% to 10% has been the expected long-term rate of return for equities, and 3% to 7% has been the expected long-term rate of return for fixed income securities. Many economists and investment professionals are projecting lower returns; in light of these projections, as well as historical investment returns, the 6.75% interest rate assumption is within the reasonable assumption range. We encourage close monitoring for changes in investment performance against expectations.
- The salary increase assumption reflects prior experience, current expectations, and professional judgement.
- The UAAL and funded ratio are measures of the plan's funded status. These measures reflect the plan's position as of January 1, 2023. We believe these measures, by themselves, are not appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations or assessing the need for or the amount of future contributions. However, we believe these measures, in conjunction with the plan's projections at multiple discount rates, maturity measures, and solvency, are appropriate for assessing the amount of future contributions.

Disclosure Information

This disclosure information is based on <u>GASB Statement 25 prior to the issuance of GASB Statement 67. The Retirement Board has requested this be included in the valuation report</u>. Information with regards to GASB Statements 67 and 68 can be found in a separate report issued by Stone Consulting, Inc. as well as the MPAERS's Financial report and the Massachusetts Port Authority's Financial Statement.

The most recent actuarial valuation of the System was prepared by Stone Consulting, Inc. as of January 1, 2023.

The normal cost for employees on that date was	\$11,501,287	9.64% of expected payroll
The normal cost for the employer was	\$2,700,063	2.26% of expected payroll
The actuarial accrued liability for active members was*	N/A	
The actuarial accrued liability for retired members was*	N/A	
Total actuarial accrued liability*	\$915,124,721	
System assets as of that date	\$839,625,273	
[Market value of assets]	[\$766,073,097]	
Unfunded actuarial accrued liability*	\$75,499,448	

*Frozen entry age. Per Q&A – 88 of the GASB Statement 25 Implementation Guide requires you to illustrate the funding progress using the frozen initial unfunded amounts. The actuarial liability shown is the frozen initial unfunded amount plus the assets. The funding method does not explicitly calculate an actuarial accrued liability and therefore it cannot be broken down by active and retired members.

The ratio of system's valuation	assets to total actuarial liability was	91.7%
The principal actuarial assump Investment Return:	tions used in the valuation are as follows: 6.75% per annum	
Rate of Salary Increase:	4.25% per annum

Notes:

Additional changes to annual retirement allowances can be due to various factors including:

- 1. Cost of living increases under Massachusetts General Laws Chapter 103
- 2. Retroactive benefit changes
- 3. Post-retirement COLA under Massachusetts General Laws Chapter 32, Sections 90A, 90C and 90D
- 4. Suspension of benefits
- 5. Changes in worker's compensation offsets
- 6. Data corrections
- 7. Change in dependents' allowance due to dependents exceeding age limit.

Solvency Test

A solvency test is a method of checking the short-term progress towards funding. The plan's present actuarial value of assets is compared to:

- 1. Active members' contributions;
- 2. Liabilities for retirees and beneficiaries; and
- 3. Liabilities for service accrued for active members and inactive members

		Cove	e <mark>red</mark> by As	sets			
Valuation Date	Active Member Contributions (1)	Retirees and Beneficiaries (2)	Active/Inactive Members (Employer Financed) (3)	Actuarial Value of Assets	(1)	(2)	(3)

Notes:

- Under the Frozen Entry Age cost method actuarial accrued liability is not directly calculated. Actuarial accrued liability, as determined here, is that portion of the present value of future benefits that will not be paid by future employer normal costs.
- January 1, 2015 numbers reflect a change in assumptions. The interest rate was changed to 7.50% (from 7.625%).
- January 1, 2016 numbers reflect a change in assumptions. The interest rate was changed to 7.25% (from 7.50%) and retirement age is delayed until age 60 for post 9/30/2009 hires who are not eligible for post-retirement medical insurance until age 60.
- January 1, 2018 numbers reflect a change in the pension increase adjustment base (COLA Base) to \$14,000 (from \$13,000)

Portion of AAL

- Massachusetts Port Authority Employees' Retirement System Actuarial Valuation as of January 1, 2023
 - January 1, 2019 numbers reflect a change in assumptions. Mortality is based on the RP2014 at 2006 Table Healthy Employees (sex-distinct) projected with MP2018 Generational Mortality and a change to retirement, disability and withdrawal assumptions. Also reflects a change in the treatment of vacation buybacks.
 - January 1, 2020 numbers reflect a change in assumptions. The interest rate was changed to 7.00% (from 7.25%). The salary increase assumption was changed to 4.25% (from 4.50%). Compensation limits under Section 401 (a) (17) were recognized.
 - January 1, 2021 numbers reflect a change in assumptions. The mortality table was changed to MP2020 mortality projection (from MP2018 projection). The withdrawal and retirement rates were also modified.
 - January 1, 2022 numbers reflect a change in assumptions. The interest rate was changed to 6.75% (from 7.00%). The mortality table was changed to the Pub-2010 Table with MP2021 mortality projection.
 - January 1, 2023 numbers reflect a change in the pension increase adjustment base; for FY23 only, an increase of 5% was granted on a Base of \$14,000, an increase of 2% compared to the typical 3% increase.

Actuarial Methods and Assumptions

The assumptions used for the actuarial valuation are recommended by the actuary and adopted by the Retirement Board on an annual basis in conjunction with guidance provided by the actuary. Refer to number 16 of this section to see changes in assumptions and methods. In addition, Massachusetts State Law specifies the actuarial cost method to be used.

ACTUARIAL METHODS

The Frozen Entry Age Actuarial Cost Method has been used in this valuation. Under this method, the present value of all future benefits is determined for each individual participant as of each valuation date. The unfunded frozen actuarial liability represents the unfunded portion of the initial actuarial accrued liability as adjusted for plan changes and changes in assumptions. The annual normal cost is then determined as the amount necessary to fund, as a level percentage of pay of the participants included in the valuation, the excess of the present value of future benefits over the sum of the assets and the unfunded actuarial accrued liability. Actuarial gains and losses are not directly recognized under this method, but are spread over future years as a portion of the annual normal cost.
The Asset Valuation Method is the market value of assets (adjusted by payables and receivables) adjusted to phase in investment gains or losses above or below the expected rate of investment return. A five-year rolling period is used. The phase-in is 20% for year one, 40% for year two, 60% for year three, 80% for year four and 100% for year five. The actuarial value of assets must be within a corridor of 85% to 115% of the adjusted market value of assets.
6.75% per year
 Pre-Retirement: Pub-2010 Table Healthy Employees (sex-distinct) projected with MP2021 Generational Mortality. Separate tables for Groups 1 & 2 (General Employees) and for Group 4 (Public Safety). Post-Retirement: Pub-2010 healthy annuitant and contingent survivor Tables (sex-distinct) projected with MP2021 Generational Mortality. Group distinctions apply as with actives.

Actuarial Methods and Assumptions (Continued)

- Mortality (cont'd) Disabled: Pub-2010 Table for disabled lives (sex-distinct) projected with MP2021 Generational Mortality was used. Mortality for accidental disability is assumed to be 50% from the same cause as the disability. Separate tables for Groups 1 & 2 and for Group 4.
- 3a. Rates of
RetirementGroup 1, 2 and 4 employees are assumed to retire at the following rates
upon attainment of 10 years of service. If hired after 9/30/2009 and not
eligible for post-retirement medical insurance until age 60, retirement
begins at age 60 with 10 years of service.

Age	Group 1	Group 2 [*]	Group 4
50	2%	2%	2%
51	2	2	2
52	2	2	2

Actuarial Methods and Assumptions (Continued)

4. Withdrawal Prior to Retirement

The rates shown at the following sample ages illustrate the ultimate withdrawal assumption. There is a 10 year select period for Groups 1 and 2.

Rate of Withdrawal			
Age	Groups 1 and 2 [*]	Group 4*	
25	7.0%	6.0%	
30	7.0	0.5	
35	6.0	0.5	
40	4.0	0.4	
45	3.0	0.1	
50	0.5	N/A	
55	0.5	N/A	

^{*}Groups 1, 2 and 4 are assigned based on employee class, as described in the Summary of Principal Plan Provisions, Section 1.

Actuarial Methods and Assumptions (Continued)

5. Disability Prior to Retirement

The rates shown at the following sample ages illustrate the assumption regarding the incidence of disability:

Rate of Disability				
Age	Group 1*	Group 2*	Group 4 [*]	
25	.01%	.01%	.40%	
30	.01	.01	.40	
35	.34	.34	.40	
40	.68	.68	.40	
45	.10	.10	.50	
50	.133	.133	.65	
55	.14	.14	.65	
60	.12	.12	.20	

Disability is assumed to be 25% ordinary and 75% accidental for Groups 1 and 2 and 10% ordinary and 90% accidental for Group 4.

^{*}Groups 1, 2 and 4 are assigned based on employee class, as described in the Summary of Principal Plan Principal Plan Provisions, Section 1

Actuarial Methods and Assumptions (Continued)

6.	Salary Increases	4.25% per year.
0.	Salary increases	4.23% per year.
7.	Regular Interest Rate Credited to Annuity Savings Account	2% per year.
8.	Family Composition	Members are assumed to be married with two dependent children - one male and one female both age 15; age difference between member and spouse assumed to be three years (the male being the older).
9.	Pension Adjustments	For purposes of the valuation, it is assumed that the Massachusetts Port Authority Employees' Retirement Board will fund 3% annual pension adjustment (cost-of-living increases).
10.	Pension Adjustment Base	The pension adjustment base (cost-of-living base) is assumed to be \$14,000.
11.	Expenses	Budgeted amount for the fiscal year, excluding investment management fees and custodial fee, is added to the Normal Cost.
12.	Credited Service	An active member's credited service is attributed to Massachusetts Port Authority employment.
13.	Vacation Buybacks	Vacation Buybacks were not assumed to be regular compensation and were not considered in the calculation of future retirement benefits. A liability of \$290,734 was assumed to reflect the value of return of employee contributions that were previously taken on vacation buybacks.
14.	Valuation Date	January 1, 2023.
15	Inflation Data Accumption	2 500%
15.	Inflation Rate Assumption	2.50%

Actuarial Methods and Assumptions (Continued)

16.	Recent Changes	As of January 1, 2023 the retiree benefits reflect a 5% COLA that was granted for FY23 (an additional 2% compared to the typical 3% increase).
		As of January 1, 2022 the interest rate changed to 6.75% (from 7.00%) and the mortality assumption was changed to the Pub-2010 Table with MP-2021 generational mortality projection.
		As of January 1, 2021 the mortality projection was changed to MP2020 (from 2018) and the retirement and withdrawal rates were modified to by adding a multiplier for the 2021 year to reflect short-term experience expected due to the impact of financial stress on the Authority arising from the SARS-CoV-2 pandemic. Rates in 2022 onward were not changed.
		As of January 1, 2020 the interest rate changed to 7.00% (from 7.25%) and salary rate to 4.25% (from 4.50%). The salary maximum under section 401(a)(17) was recognized.
		As of January 1, 2019 the mortality assumption was changed to the RP2014 at 2006 Table Healthy Employees (sex-distinct) projected with MP2018 Generational Mortality. The withdrawal, retirement and disability assumptions were also changed. Vacation buybacks were assumed not to be regular compensation.
		As of January 1, 2018 the benefit adjustment base (COLA base) was increased to \$14,000 (from \$13,000)
		As of January 1, 2016 the interest rate changed to 7.25% (from 7.50%) and employees hired after 9/30/2009 and not eligible for post-retirement medical insurance until age 60, retirement begins at age 60 with 10 years of service.
		As of January 1, 2015 the interest rate changed to 7.50% (from 7.625%).
17.	Date of Adoption	All assumptions and methods were adopted by the MPAERS Board on April 25, 2023 for use in the January 1, 2023 actuarial valuation and thereafter.
18.	Contribution Timing	Contributions are assumed to be made at the beginning of the fiscal year, July 1.

Summary of Principal Plan Provisions

1. Participant	Participation is mandatory for all full-time employees whose employment commences before age 65. There are three classes of members in the retirement system:
	Group 1: general employees
	Group 2: employees in specified hazardous occupations (e.g., guards)
	Group 4: firefighters and electricians

2. Member Contributions Member cont

Member contributions vary depending upon date hired as follows:

Date of Hire	Member Contribution Rate
Prior to 1975	5% of Pay
1975 - 1983	7% of Pay
1984 - June 30, 1996	8% of Pay
After June 30, 1996	9% of Pay

Chapter 697 provision requires members hired after 1978 to contribute an additional 2% of pay over \$30,000.

3. Pay		
ć	a. Pay	Gross regular compensation excluding bonuses, overtime, severance pay, unused sick pay, and other similar compensation.
1	o. Average Pay	The average of pay during the three consecutive years (or five consecutive years if hired after April 1, 2012) that produce the highest average or, if greater, during the last three years (or five years if hired after April 1, 2012), (whether or not consecutive) preceding retirement.
4. Cred	ited Service	Period during which an employee contributes to the retirement system plus certain periods of military service and "purchased" service.

Summary of Principal Plan Provisions (Continued)

b. Retirement Allowance

5. Service Retirement

a. Eligibility

1) Attainment of age 55 and completion of ten years of credited service or at any age with completion of 20 years of service. If hired prior to 1978 or a member of Group 4, the completion of ten years of service is not required.

2) Hired after April 1, 2012 and Group 1 – Age 60 and
Completion of 10 years of credited service. Group 2 – Age 55 and completion of 10 years of service. Group 4 – Age 55.
Determined as the product of the member's benefit percentage, average pay and credited service, where the benefit percentage is shown below (maximum allowance of 80% of average pay):

Benefit Percentage	Group 1	Group 2	Group 4
2.5%	65+	60+	55+
2.4	64	59	54
2.3	63	58	53
2.2	62	57	52
2.1	61	56	51
2.0	60	55	50
1.9	59	N/A	49
1.8	58	N/A	48
1.7	57	N/A	47
1.6	56	N/A	46
1.5	55	N/A	45
	Hired after April 1, 2012*		2012*
2.5%	67+	62+	57+
2.35	66	61	56
2.20	65	60	55
2.05	64	59	N/A
1.90	63	58	N/A
1.75	62	57	N/A
1.60	61	56	N/A
1.45	60	55	N/A

*Reduction is .125% for each year early instead of .15% per year for employees with over 30 years of service.

In addition, veterans receive an additional \$15 per year for each year of credited service up to 20 years

Summary of Principal Plan Provisions (Continued)

6. Deferred Vested Retirement

7.

a.	Eligibility	Completion of ten years of credited service.
b.	Retirement Allowance	Determined in the same manner as "Service Retirement" section above with the member eligible to start collecting a benefit at age 55, (or age 57 for post-April 1, 2012 hires) or defer until later at his or her discretion.
		If a member chooses, his or her contributions with interest may be withdrawn. The amount of interest he or she will receive depends on length of service and whether or not the termination of employment was voluntary.
Ordinary Disability Retirement		
a.	Eligibility	Non-job related disability after completion of ten years of credited service.
b.	Retirement Allowance	Determined in the same manner as "Service Retirement" section and calculated as if the member had attained age 55 (or age 57 for those hired after April 1, 2012), if younger. Veterans receive 50% of pay (during final year) plus an annuity based on accumulated member contributions with interest.
Accidental Disability Retirement		

8. Accidental Disability Retirement

a.	Eligibility	Disabled as a result of an accident in the performance of duties. No age or service requirement.
b.	Retirement Allowance	72% of pay plus an annuity based on accumulated member contributions with interest. Also, a dependent's allowance per year for each child. Total allowance not to exceed 100% of pay (75% for members hired after 1987).

Summary of Principal Plan Provisions (Continued)

9.	9. Non-Occupational Death		
	a.	Eligibility	Dies while in active service, but not due to occupational injury.
	b.	Retirement Allowance	Benefit as if Option C had been elected (see below) and member had attained age 55 (or age 57 for those hired after April 1, 2012) if younger. Minimum monthly benefits provided as follows: spouse - \$500, first child - \$120, each additional child - \$90
10.	Осс	upational Death	
	a.	Eligibility	Dies as a result of an occupational injury.
	b.	Retirement Allowance	72% of pay plus refund of annuity savings fund balance. In the case of an accidental disability retiree who dies of the same cause, the beneficiary receives 72% of the last 12 months salary or the current pension amount, whichever is greater.
11.	Cos	t-of-Living Increases	Applied to the first \$14,000 of annual benefit. Funded by the Authority.
12.	Opt	ional Forms of Payment	
	a.	Option A	Allowance payable monthly for the life of the member.
	b.	Option B	Allowance payable monthly for the life of the member with a guarantee of any remaining member contributions with interest.
	C.	Option C	Allowance payable monthly for the life of the member with 66- 2/3% continuing to the member's beneficiary upon the member's death. If the beneficiary pre-deceases the member, the allowance amount "pops-up" to the non-reduced amount (Option A).

Glossary of Terms

- 1. Present Value of Future Benefits Represents the dollar value today of all benefits expected to be earned by current members if all actuarial assumptions are exactly realized.
- 2. Actuarial Cost Method The procedure used to allocate the Present Value of Future Benefits to past and future periods of employee service.
- 3. Actuarial Assumptions Estimates are made as to the occurrence of certain events that determine the level of benefits to be provided and how long they will be provided. The more important actuarial assumptions include the investment return on assets, salary increases and the rates of turnover, disability, retirement and mortality.
- 4. Unfunded Frozen Actuarial Liability The liability set under the Entry Age Actuarial Cost Method at plan inception, adjusted at each valuation to reflect the addition of interest and the amortization of liability since the previous valuation. The amount is adjusted by any increases or decreases in the actuarial liability (determined under the Entry Age Method) due to changes in benefits or actuarial assumptions after plan inception.
- 5. Normal Cost That portion of the Present Value of Future Benefits that is attributable to benefits to be earned in the coming year. Under the Frozen Entry Age Method, the Normal Cost is the portion of the Unfunded Present Value of Future Benefits which is not attributable to the Unfunded Frozen Actuarial Liability. This amount is then funded as a level percentage of pay.
- 6. Actuarial Value of Assets Value of the funds set aside through Authority and member contributions to provide for benefits, as measured by the actuary for valuation purposes.
- 7. Unfunded Present Value of Future Benefits That portion of the present value of Future Benefits, not covered by the Actuarial Value of Assets.
- 8. **PERAC** Public Employee Retirement Administration Commission, a division of the State government which has regulatory authority over the administration of the retirement system.
- 9. GASB Government Accounting Standards Board, which issues guidance for disclosure of retirement system liabilities.
