

# Milton Route 28 Road Diet Pilot

## Regional Impacts

### What is happening?

MassDOT is conducting a Road Diet Pilot on **Route 28 (Randolph Avenue) from Reedsdale Road to Chickatawbut Road in Milton**. The goal of the Pilot is to address ongoing public safety concerns along the corridor by reducing speeds and conflicts. Pilot programs use temporary materials to test out potential roadway changes. Drivers may experience temporary disruptions during the initial installation, but no major construction activities will occur beyond this period. Once the Pilot is complete, MassDOT will evaluate the results using pre- and post-Pilot data collection and feedback to determine the next steps.

### How will I be impacted?

The Pilot will reduce Route 28 from four travel lanes to two travel lanes, introduce two-way left-turn lanes in areas of dense access, and install painted medians with flexible delineation posts in areas where left-turns will be restricted.

**Regional Impacts:** Travelers are encouraged to use the interstate system and other major arterial routes, as well as available transit options. Drivers should anticipate an adjustment period during the Pilot's initial installation.
