## Mobile Satellite Trailer

MEMA has a field response support trailer, named the Mobile Satellite Trailer (MSAT). The MSAT is fully outfitted and is ready for deployment at a moments notice for responses and planned events where a compact mobile satellite communications asset is needed. This trailer can be requested by **any** community or agency in the Commonwealth through either the MEMA Regional offices or MEMA Headquarters for use in emergencies, pre-planned events, and disasters. The MSAT trailer is a specialized satellite communications asset that can provide communications support to incident commanders dealing with disasters, incidents, or planned events. The MSAT trailer can provide communications in areas with no cellular coverage by providing on scene communications support, serving as a mobile hub for (4) dedicated satellite phone lines that can be utilized concurrently, and also has internet capability for up to (5) computers. The trailer also has Wi-Fi capability providing internet throughout the incident or event scene, and is fully self sustainable with its' own diesel generator power source.
