Acknowledgments

This report would not have been possible without the cooperation of administrators in all of the community corrections centers and collaborating agencies and the guidance and support of the Massachusetts Sentencing Commission. The Office of Community Corrections would like to acknowledge that cooperation and assistance as follows:

Barnstable County

Sheriff James M. Cummings
Christine Costa, Program Manager, Hyannis

Berkshire County

Sheriff Thomas Bowler
Kyle Schadler, Program Manager, Pittsfield

Bristol County

Sheriff Thomas M. Hodgson
Scott Gomes, Program Manager, Taunton
Thomas Carter, Program Manager, Dartmouth

Dukes County

Sheriff Michael A. McCormack
Jeremy Norton, Program Manager, West Tisbury

Essex County

Sheriff Frank G. Cousins, Jr.
Christine Eisenhaure, Program Manager, Lawrence
Scott Hentosh, Program Manager, Lynn
Robert Levarone, Program Manager, Salisbury

Hampden County

Executive Summary

This report was prepared to present summary data on the utilization of community corrections centers in Massachusetts:

- This report provides statistical data on the 21 community corrections centers in operation during the entirety of FY 2012;
- On average, 801 offenders were participating in the programs daily at the community corrections centers state-wide;
- All community corrections center program participants were under the supervision of a criminal justice agency:
 - 77.3% were supervised by probation
 - 15.3% were supervised by a sheriff department and
 - 7.3% were supervised by the Parole Board
 - 0.1% were supervised by the Department of Correction
- The community corrections centers facilitated intensive criminal justice supervision of participants at intermediate sanction Level III or Level IV:
 - 91.8% were Intermediate Sanction Level III; and,
 - 8.2% were Intermediate Sanction Level IV.
- Community corrections center program participants were both male and female:
 - 18% were female; and,
 - 82% were male.
- There were 3,031 community corrections referrals :
 - 90.9% were Intermediate Sanction Level III; and,
 - 9.1% were intermediate Sanction Level IV.
- There were 788 intermediate sanction level III and IV participant transitions:
 - 6.6% made a transition from Level IV to Level III;
 - 93.3% made a transition from Level III to Level II (standard supervision).

There were 2,193 intermediate sanction level III and IV participant terminations from community corrections:

- 10.9% of participants were terminated from Level IV;
 - 89.1% of participants were terminated from Level III.
-
- There were 20,305 referrals to the community service program. Among those referrals:
 - 76.1% were male;
 - 23.9% were female.And:
 - 96.8% were adults;
 - 3.2% were juveniles.
-
- There were 109 participants awarded their GED in FY 2012
-
- There were 873 participants placed in jobs in FY 2012
 - 25.7% of those participants received placement into part time jobs;
 - 74.3% of those participants received placement into full time jobs.
-
- There were 737 participants placed in aftercare in FY 2012.
-
- There were 70,255 specimens screened for illicit drugs in FY 2012:
 - 88.3% reported negative results;
 - 11.7% reported positive results.

OFFICE OF COMMUNITY CORRECTIONS

UTILIZATION OF COMMUNITY CORRECTIONS CENTERS STATISTICAL REPORT, FY 2012

INTRODUCTION

The Office of Community Corrections (OCC) is authorized by Massachusetts General Law Chapter 211F. The mission of OCC is the establishment of intermediate sanctions programs which offer a continuum of sanctions and services for probation, sheriffs, parole, the Department of Youth Services (DYS), and the Department of Correction (DOC). These intermediate sanctions are delivered at community corrections centers across the state.

Community corrections centers are community based, intensive supervision sites, which deliver bundled **sanctions** and **services**, including treatment and education, to high risk offenders via Intermediate Sanction Levels.

Among the **sanctions** delivered at community corrections centers are:

- electronic monitoring
- community service
- drug & alcohol testing
- day reporting

Among the **services** provided at community corrections centers are:

- substance abuse treatment
- GED/ABE/ESL or comparable educational component
- communicable disease prevention education

- job readiness training and placement
- referral to Department of Public Health or Department of Mental Health service providers
- women's services
- Life Skills

Community corrections centers are designed to provide a targeted criminal justice response to a specific group of offenders. That response is delivered at the Community Corrections Center by assignment to an Intermediate Sanction Level. Intermediate Sanction Levels III and IV are intended for those offenders who possess a substantial criminal history and are chronic substance abusers. In addition, this group may be underemployed or unemployed. Finally, Intermediate Sanction Levels III and IV are reserved for those offenders who hold a strong potential for eventual incarceration or who have served a term of incarceration and are returning to the community.

Intermediate Sanction Levels are adopted from the Massachusetts Sentencing Commission's Report to the General Court, April 10, 1996:

The commission . . . adopted the notion of a continuum of four levels of intermediate sanctions, based on the constraints on personal liberty associated with the sanction . . .

Figure 2 shows the sentencing guidelines grid proposed by the Massachusetts Sentencing Commission and the manner in which intermediate sanctions are integrated into the sentencing guidelines. The intermediate sanction levels represent the practical method by which a combination of sanctions and services are assigned to offenders. Community corrections centers are designed to provide for the intensive supervision of offenders, delivering a bundled program of sanctions and services to offenders at Intermediate Sanction Level III and Level IV.

Intermediate Sanction Level IV is the most intense level of community based, criminal justice supervision. Sanctions and services required at this level of supervision represent a twenty-four hour restriction upon the liberty of the offender. Level IV participants are required to report to the community corrections center for four to six hours per day, five days per week. Additionally, offenders placed at Intermediate Sanction Level IV are monitored twenty-four hours per day via electronic device, required to submit to the highest category of random drug

and alcohol testing, and typically mandated to attend two four-hour community work service shifts per week.

Intermediate Sanction Level III is an intense level of community-based, criminal justice supervision. Sanctions and services required at this level of supervision represent a daily imposition upon the liberty of the offender. Level III participants are required to report to the community corrections center for one to four hours per day, three to five days per week. Offenders placed at Intermediate Sanction Level III may be monitored via electronic device. Level III also requires random drug and alcohol testing, and attendance at, at least one four-hour community service shift per week.

Community Service. The Community Service Program manages the implementation of community work service as an intermediate sanction for criminal justice agencies throughout the state. Offenders are referred to the Community Service Program as a condition of probation, parole, or pre-release and as a component of an intermediate sanction level at a community corrections center. The Community Service Program specifically addresses the purposes of sentencing by: ensuring public safety by providing closely monitored community work service; promoting respect for the law and the community through community restitution; and, providing opportunities for work skills training.

Drug & Alcohol Testing. Drug testing is among the graduated sanctions available at the community corrections centers. Offenders are subject to drug testing at both intermediate sanction levels III and IV. The drug testing system is modeled after the American Probation and Parole Association's Drug Testing Guidelines and Practices for Adult Probation and Parole Agencies. Upon assignment to an Intermediate Sanction Level, participants are assigned a drug testing color. The assigned color corresponds to the participant's risk level. Participants are required to call a toll free number daily in order to determine what color will be tested that day. When a participant's color is selected on a particular day, the participant is required to report for drug testing. Specimen collection is observed by staff.

Since the inception of the OCC in 1996, 27 community corrections centers have been developed across the Commonwealth. Due to budgetary constraints centers have had to close. There are currently 21 centers in operation, which are the subject of this study.

Figure 1 shows the number of community corrections centers in operation per month from 1998 to FY 2012. A list of the community corrections centers and their dates of operation can be found in the Appendix.

This report provides summary statistical data on the utilization of community corrections centers in FY 2012. It is intended to inform judges, probation and parole officers, correctional staff, policy makers, and most importantly, the public about the development of significant criminal justice policy and practices in Massachusetts.

Figure 1. Number of Community Corrections Centers, 1998 to 2012

- IS-I Financial Accountability

The numbers in each cell represent the range from which the judge selects the maximum sentence (Not More Than); The minimum sentence (Not Less Than) is 2/3rds of the maximum sentence and constitutes the initial parole eligibility date.

METHOD

Study Sample. All community corrections centers operating during the entire FY 2012 were included in the sample. A list of the community corrections centers included in this report and their dates of operation is contained in the Appendix. In the tables, each of the community corrections centers is referred to by the city or town in which it is located. Some of the centers specialize services for select groups of offenders. The following abbreviations have been adopted:

- CCC community corrections center (adult males and females)
- JRC juvenile resource center (juvenile males)
- WRC women's resource center (adult females)

Study Period. The study period covers FY 2012, or July 1, 2011 through June 30, 2012.

Data Collection. Data collection was done from monthly utilization reports and community service log reports submitted by each community corrections center and the Community Service Program to the OCC.

Monthly utilization reports formed one basis of the data collection for this report. Several variables of data were collected. These included variables related to the population flow through the center, and those related to the status of participants within the center. For each category of data that was collected the data was separated by intermediate sanction level (III or IV), the gender of the offender, and the supervising agency (probation, parole, sheriff, DYS, or DOC). Data was generally reported in the form of numbers of offenders participating in the program at the end of each month in a particular category, or the number served during each month. The categories of data are as follows:

New Participants. The monthly utilization reports provided the number of new participants by intermediate sanction level, gender and supervising agency for the reporting period.

Transitions. The monthly utilization reports provided data regarding offender progression from one level of supervision to another. This category was called *transition*. This includes the movement of a participant from Intermediate Sanction Level IV to Intermediate Sanction Level III, indicated as a Level IV transition or from Intermediate Sanction Level III to

Intermediate Sanction Level II (standard supervision), indicated as Level III transition.

Terminations. The monthly utilization report also provided data regarding offender discharge from the community corrections center which was labeled *termination*. Such data was separated by level, gender and supervising agency and was further classified regarding the reason for offender termination. The reasons for termination from intermediate sanction level III and IV were codified on the form and included the following: warrant issued, violation of probation pending, incarcerated, returned to higher custody, sentence expired or paroled, placed in residential or inpatient treatment, transferred to another community corrections center, unable to continue due to medical issues. Community corrections centers also reported data corresponding to categories of program services or sanctions. These categories include GED, job placement, aftercare status, and drug testing.

GED. The monthly utilization reports provided the number of participants that took the GED examination, the number of participants that passed a portion of the examination, and the number of participants that passed the examination and received their GED.

Job Placement. The monthly utilization reports provided the number of participants that were placed in a part time job and the number of participants that were placed in a full time job.

Aftercare. The monthly utilization report provided the number of participants that made a successful transition to Intermediate Sanction Level II (standard supervision) and were placed in an aftercare program of low restriction or voluntary nature.

Drug Testing. The monthly utilization report provided the number of participants for which a negative drug test result was reported, the number of participants for which one or more positive results were reported on a particular specimen, and the number of participants that tested positive for a particular substance such as, cocaine, opiate, THC, etc.

Community Service Logs provided the second source of data collection and provided aggregate monthly information on the number of referrals to the program for each court site. Because community service is provided at court sites as well

as community corrections center sites, these logs were maintained on a county level rather than a community corrections center level.

Data Analysis. The 12 monthly utilization reports for each center along with the community service logs formed the basis of the analysis. Some of the analysis displays aggregated data across all community corrections centers for each week. Other data analysis shows the average reported utilization by center across the entire study period.

Data Quality. Monthly utilization reports were received from all of the community corrections centers for the entire study period.

FINDINGS

TOTAL POPULATION

Figure 3 shows the total population in the 21 community corrections centers for each reporting month in the study. In January 2012, community corrections centers reported a high total of 896 Intermediate Sanction Level III and IV participants. In July 2011, community corrections centers reported a low total of 668 intermediate sanction level participants.

Figure 4 shows the average population in each of the community corrections centers for the study period. The community corrections centers ranged from an average of 12.5 participants at the Boston WRC to an average of 74.2 participants at the Boston CCC. The state wide cumulative average attendance across all centers was 801 participants.

Figure 3. Total Population by Month

Figure 4. Average Population by Center

POPULATION BY SUPERVISING AGENCY

Figure 5 shows the supervising agency of participants in community corrections centers. During the study period, participants in the community corrections centers were under the supervision of one of four different agencies. On average, 77.3% of the participants were under the supervision of probation; 15.3% were under the supervision of a sheriff's department; 7.3% were under the supervision of the Parole Board and 0.1% were under the supervision of the Department of Correction.

Figure 5. Population by Supervising Agency

Figure 6 shows the supervising agency of the participants at each of the community corrections centers during FY 2012. There were large differences in the population at each of the centers. Worcester JRC had the highest average proportion of probation supervised participants (100%). Among the adult centers The Boston WRC had the highest proportion of probation supervised participants (97.3%); Pittsfield CCC had the highest average proportion of parole supervised participants (30%); Northampton CCC had the highest average proportion of sheriff's supervised participants (58.1%); Worcester CCC had the highest average proportion of Department of Correction supervised participants (1.8%).

Figure 6. Average Population by Supervising Agency and Center

POPULATION BY LEVEL

Figure 7 shows the distribution of the population in community corrections centers by intermediate sanction level in FY 2012. On average, 91.8% of the participants were supervised at Intermediate Sanction Level III and 8.2% were supervised at Intermediate Sanction Level IV. Figure 8 shows the distribution of the population by intermediate sanction level for each of the 21 community corrections centers. The West Tisbury CCC had the highest proportion of participants at Intermediate Sanction Level IV (20%). The Holyoke CCC had 100% intermediate sanction level III participants. The Holyoke CCC has the highest segment of intermediate sanction level III, due to the fact that the center only accepts participants of level III status. The Northampton CCC follows as having the next highest segment of intermediate level III participants with 99.3%.

Figure 7. Average Population by Intermediate Sanction Level

Figure 8. Average Population by Intermediate Sanctions Level and Center

POPULATION BY GENDER

The community corrections centers provided services to both male and female participants. As shown in Figure 9 on average, 18% of the participants in the community corrections centers were female and 82% were male. Figure 10 shows the distribution of population by gender for each of the 21 community corrections centers. One of the centers provided services exclusively to female participants: the Boston WRC. The Boston CCC provided services exclusively to adult male participants, and the Worcester JRC provided services to juvenile male participants only. Among the centers providing services to both male and female participants, Lawrence CCC had the highest average proportion of males (93.5%) and Salisbury CCC had the highest average proportion of females (57.3%).

Figure 9. Average Population by Gender

Figure 10. Average Population by Gender and Center

NEW PARTICIPANTS

Participants can be referred to the community corrections centers at any point during the year. Participants were referred to community corrections centers by the court (in the case of probation supervised participants), by the Parole Board, by a Sheriff's Department, by the Department of Correction or by DYS. Participants were referred at two intermediate sanction levels. Intermediate Sanction Level III represents daily accountability consisting of structured program services such as substance abuse treatment and sanctions such as drug testing and community service at the center. Intermediate Sanction Level IV represents 24-hour restriction and includes electronic monitoring along with structured program services and sanctions.

Figure 11 shows the proportion of participants referred to community corrections centers at intermediate sanction level III, and IV. In FY 2012. The majority of participants were referred to IS Level III.

Figure 11. Referrals by Level

Figure 12. Referrals by Level and Agency

Figure 12 shows new referrals by level and supervising agent. During FY 2012 there were 2,751 referrals to IS Levels III and 280 referrals made to IS Level IV

	Probation		Parole		Sheriff		DOC		Total	
	N	%	N	%	N	%	N	%	N	%
Level 4	118	5%	23	8%	139	24%	0	0%	280	9%

Elmo	150	7%	30	10%	219	38%	0	0%	399	13%
No Elmo	1881	88%	241	82%	225	39%	5	100%	2352	78%
Total	2149	100%	294	100%	583	100%	5	100%	3031	100%

TRANSITIONS AND TERMINATIONS

The terms transition and termination are used to describe the flow of participants through the community corrections center. Data reported here indicates participants whose status changed during FY 2012. Generally speaking a transition describes a participant that is progressing through intermediate sanction levels within the community corrections center, while a termination describes a participant that has been discharged from the community corrections center.

There were 788 intermediate sanction level III and IV transitions and 2,193 intermediate sanction level III and IV terminations from community corrections centers during FY 2012. Transitions included all participants that moved from a higher to a lower intermediate sanction level during the reporting period. Terminations included participants that were discharged from community corrections centers for the following reasons: warrant issued, violation of probation pending, incarcerated, returned to higher custody, sentence expired/paroled, placed in residential or inpatient treatment, transferred to another community corrections center, unable to continue for medical reasons, removal from programming by supervising agency.

As shown in Figure 13:

- 2.0% of participants moved from Level IV to Level III;
- 25.0% of participants moved from Level III to Level II or standard supervision;
- 8.0% of participants were terminated from Level IV ;
- 65.0% of participants were terminated from Level III.

Figure 14 shows the number of transitions by month and level. Figure 15 shows the number of transitions by center and level. Figure 16 shows the number of terminations by month and level. Figure 17 shows the number of terminations by center and level.

The reasons for intermediate sanction level III and IV terminations are featured in Figure 18. Among Level IV terminations the most prominent reasons reported *Sentence Expired* at 43.3%. For Level III terminations the most frequent reason was *return to higher custody / incarcerated* at 31.3%.

Figure 13. Transitions and Terminations from Centers

Figure 14. Transitions by Month and Level

Figure 15. Transitions by Center and Level

Figure 16. Terminations by Month and Level

Figure 17. Terminations by Center and Level

Figure 18. Termination Reasons for Level III, IV

Total Outcomes: Transition and Termination

A termination or discharge can be with criminal justice intervention or without criminal justice intervention. A termination without criminal justice intervention is not necessarily due to non compliance. Such terminations include; sentence expired/paroled, placed in residential treatment, unable to continue due to medical/mental illness, transferred to another OCC/jurisdiction, or removal by supervising agency. Whereas, terminations with criminal justice intervention would include; warrant issued, violation of probation pending, or returned to higher custody.

Combining the transitions (a participant that is progressing through intermediate sanction levels within the community corrections center) and the terminations without criminal justice intervention, portrays a more accurate picture of participant outcomes unrelated to noncompliance. In FY 2012 54.5% of the outcomes were without criminal justice intervention, while only 45.5% of the participants were terminated due to criminal justice intervention.

Figure 19. Outcome without criminal justice intervention and with criminal justice intervention

GED

Education is among the service components at community corrections centers. Data was collected regarding General Education Development (GED) preparation in FY 2012. Across the state 109 intermediate sanction level participants were awarded their GED in FY 2012. As indicated in Figure 20, Springfield CCC had the greatest number of participants receive a GED.

*All juvenile participants are required to be full time students, therefore do not require GED services.

Figure 20. GED Performance by Center

JOB PLACEMENT

Job placement is another among the service components of community corrections centers. Figure 21 indicates the number of participants that were placed in full or part time jobs by job developers at the centers and the percentage of full time and part time job placements. There were a total of 873 job placements made across the state in FY 2012, of which 649 were full time and 224 were part time. The Plymouth CCC had the greatest success in facilitating full time employment, placing 78 participants. The Plymouth CCC also had the greatest success accessing in part time employment, placing 42 participants.

Figure 21. Job Placement Performance by Center

AFTERCARE

A final service component that was tracked on monthly reports was aftercare placements. Aftercare placements consist of referrals made to community based agencies in order to obtain the support services necessary to help a participant maintain success at a lower level of supervision.

Figure 22 shows the number of aftercare placements at each center in FY 2012. There were a total of 737 aftercare placements made across the state in FY 2012. The Worcester CCC had the greatest number of aftercare placements with 94.

Figure 22. Aftercare Placement by Center

DRUG TESTING

Drug testing is among the most prominent sanctions administered by community corrections centers. Participants are tested randomly by virtue of a color code system in which the color assigned to a participant corresponds to risk level. There was variation in drug testing administration at different centers. Centers screened for different types or numbers of drugs and screened for different types or numbers of adulterants. However, all centers were contracted to screen in accordance with the standards for drug testing set forth in the American Probation and Parole Association's *Drug Testing Guidelines and Practices for Adult Probation and Parole Agencies*.

Figure 23 shows the total number of urine specimens screened for illicit drugs by each center in FY 2012. The table indicates the total number of positive and negative results. The Boston CCC performed the greatest number of drug tests with 8,204. As seen in figure 24 the Boston CCC had the greatest number of negative drug test results with 7,319. The Boston CCC had the greatest number of positive results with 885.

Figure 24 shows the percentage of positive and negative drug test results at centers in FY 2012. The average across all centers was 88.3% negative; 11.7% positive. The Northampton CCC had the greatest percentage of negative results at 95.6%. The Lowell CCC had the greatest percentage of positive results at 18.5%.

Figure 24. Percentage of Positive and Negative Drug Test Results by Center

COMMUNITY SERVICE

There were 20,305 referrals to the community service program in FY 2012. All participants at community corrections centers were referred to community service. In addition, referrals were made by the following court departments: Superior, District, Juvenile, and Probate.

Of the 20,305 referrals:

- 4,694 (23.9%) were females;
- 14,971 (76.1%) were males;
- 19,665 (96.8%) were adults;
- 640 (3.2%) were juveniles.

Figure 25 depicts the total number of adult referrals for community service by county and gender.

Figure 26 depicts the total number of juvenile referrals for community service by county and gender.

Figure 26. Juvenile Community Service Referrals by County

SUMMARY

A main purpose of this report has been to provide data on the utilization of community corrections centers. Among the highlights are:

- the community corrections centers provided service to a large number of participants;
- the community corrections centers provided services in diverse locations across the Commonwealth;
- the community corrections centers delivered intermediate sanctions to participants from different components of the criminal justice system witnessing strong collaboration; however,
- the ratio of participants from different agencies remained disparate from center to center;
- of the 2,981 outcomes (transitions and terminations), 54.5% were for non-criminal justice intervention reasons.

The project developed a reliable measure of the utilization of community corrections centers.

Based on the utility of the community corrections centers, a consistent application of intermediate sanctions across the commonwealth in 19 diverse communities and various offender populations has been observed.

The project demonstrated the utility and feasibility of conducting research across all of the community corrections centers.

This research project was the result of a collaborative effort among 21 different community corrections centers which were able to provide a consistent set of data on program utilization enabling cross center comparisons.

The electronic submission of data from the community corrections centers to the OCC was vital to the efficiency and integrity of the report.

Due to the volume of cases serviced by the community corrections centers, electronic submission of data has allowed efficient use of OCC staff resources and greater data integrity. Since FY 2008 all data collection, aggregate and case level utilization reports, from each community corrections center have been electronically submitted. This has allowed for greater depth of analysis and more sophisticated data integrity measurements.

Case level data on CCC participants.

This analysis is based on aggregate statistics provided by the community corrections centers. Since FY 2008 the OCC has developed methods for case level analysis. Full compliance with electronic submission has made this progress possible. In FY 2010 and 2011 OCC staff have addressed the following questions through case level analysis.

- what are the percentages of programming and group participation per center?
- is there a trend in preferred substances abused based on geographical location?
- is there a difference in positive transition rates between adult probation clients at community correction centers who are on electronic monitoring versus those that are on/not on electronic monitoring?

APPENDIX

This appendix contains additional information of the sample and detailed statistical tables.

- Table 1 shows a list of the 21 community corrections centers established by the office of community corrections and the date at which the center open.
- Table 2 shows summary data on the population of the community corrections centers (total population, supervising agency, intermediate sanction level, and gender) by reporting month.
- Table 3 shows summary data on the population of the community corrections centers (average population, supervising agency, intermediate sanction level, and gender) by community corrections center.
- Table 4 shows summary data on population movement (admissions, terminations and transitions) by reporting month.

Table 1. Community Corrections Centers Included in Study Sample

City and Center Type	Short Form Name	County and Community Corrections Center	Date of Opening
Barnstable CCC	BARN-CCC	Barnstable Community Corrections Center	Sep-98
