Deaths by Race and Hispanic Ethnicity

- All Deaths
  - White non-Hispanic: 88%
  - Black non-Hispanic: 5%
  - Asian non-Hispanic: 4%
  - Hispanic: 2%
  - Other: 1%

- All intents Opioids
  - White non-Hispanic: 80%
  - Black non-Hispanic: 5%
  - Asian non-Hispanic: 13%
  - Hispanic: 2%
Rate calculations based on death counts less than 5 are excluded due to rate instability.
Technical Notes

- Opioids include heroin, illicitly manufactured fentanyl, opioid-based prescription painkillers, and other unspecified opioids.
- 2017 and 2018 death data are preliminary and subject to updates. Case reviews of deaths are evaluated and updated on an ongoing basis. A large number of deaths have yet to be assigned final cause-of-death codes. The information presented in this report only includes confirmed cases. Data updated on 10/4/2019.
- Beginning with the May 2017 report, DPH started reporting opioid-related overdose deaths for all intents, which includes unintentional/undetermined and suicide.
- Beginning with the August 2019 report, DPH updated the case definition used to identify opioid-related overdose deaths to match the CDC’s case definition. The following International Classification of Disease (ICD-10) codes for mortality were selected from the underlying cause of death field to identify poisonings/overdoses: X40-X44, X60-X64, X85, and Y10-Y14. All multiple cause of death fields were then used to identify an opioid-related overdose death: T40.0, T40.1, T40.2, T40.3, T40.4, and T40.6.
