Subject: comments on wind turbines

To the members of the Mass. Ocean Management Task Force:

As a long time nautical individual of some sixty-five years, I vehemently oppose any 'Wind Power Towers' desecrating our coastal areas. If there is a legitimate need for these towers, I suggest the privately owned power companies consider the former artillery range at Camp Edwards. I believe this location would please most of the abutting property owners, since they would no longer be subjected to artillery fire/noise.

I recently retired from a municipally owned power company, and can truly say that the investor owned companies are only interested in how inexpensively they can build, and how high they can charge their customers.

Absolutely NO winds towers in our waters.
