Variable Name	Variable Description	Meta Data	Format
ID	PHD ID	9 character alphanumeric ID	Char
Match_level_Birth	CHIA Match level	1= These are members within the APCD that received a high score against the DPH input record. Candidates in this group are those that perfectly matched all elements of the DPH input record and those that generally had only one element mismatch. The threshold applied to group 1 candidates has been optimized based upon the input elements and their overall weight in determining a unique individual match. 2=This group contains members within the APCD that received a lower score against the DPH input record yet are considered possible matches. Candidates in this group could match on as little as SSN or date of birth and first name. These candidates are included for completeness.	Num

Variable Name	Variable Description	Meta Data	Format
ID	PHD ID	9 character alphanumeric ID	Char
Match_level_Birth	CHIA Match level	1= These are members within the APCD that received a high score against the DPH input record. Candidates in this group are those that perfectly matched all elements of the DPH input record and those that generally had only one element mismatch. The threshold applied to group 1 candidates has been optimized based upon the input elements and their overall weight in determining a unique individual match. 2=This group contains members within the APCD that received a lower score against the DPH input record yet are considered possible matches. Candidates in this group could match on as little as SSN or date of birth and first name. These candidates are included for completeness.	Num

Sets 1 and 7 (POP_ACS_ZCTA and POP_ACS_COUNTY) are datasets downloaded from The Public Health Disparities Geocoding Project https://www.hsph.harvard.edu/thegeocodingproject/
Based on U.S. Census Bureau, 2014-2018 American Community Survey 5-Year Estimates.

The Index of Concentration at the Extremes [12] measure captures the extent to which the population in a given area is concentrated at either extreme of a social metric and ranges from -1 (everyone in the worst category) to 1 (everyone in the best category). For our analyses, we set the extremes for this ICE as: (a) high-income White Non-Hispanic population, versus (b) low-income population of color (i.e. not white non-Hispanic) [12]. For analysis purposes, we defined categories of ABSMs using *a priori* cut-points for % below poverty (0-4.9%, 5-9.9%, 10-14.9%, 15-19.9%, and 20-100%) and quintile cut-points based on the distribution of ZCTA or city/town attributes in Massachusetts (weighted by population size).

Sets 2 through 4, 8-11 are based on Donahue Population files estimates created by Malena Hood. Dataset 5 is based on Donahue Population files created the Bureau of Family Health and Nutrition. Dataset 6 is based on Census ACS files created by the Bureau of Community Health and Prevention.

Population Estimates 2011-2019: Small Area Population Estimates 2011-2020, version 2018, Massachusetts Department of Public Health, Bureau of Environmental Health. Version 2018 years 2016-2019 apply updates from U.S. Census Bureau's County Population by Characteristics, vintage 2018; all previous years apply updates from U.S. Census Bureau's County Population by Characteristics, vintage 2017. Population estimates used for years following the decennial census were developed by the University of Massachusetts Donahue Institute (UMDI) in partnership with the Massachusetts Department of Public Health, Bureau of Environmental Health.

Appendix 2: Unit

Unit of Measurement	Explanation
Dosage Unite (DU)	DU stands for Dosage Units, or any drug in its collected form (pill, powder, etc.). NEHIDTA do not convert, nor do they use formulas for converting DU to Kg. If a substance is seized and the evidence is weighed as opposed to counted, then the weight is reported. If the substance is counted, then they get a DU count. This is solely dependent on how the seizing agency handles and reports the seizure within their parent agency's protocols.

Pregnancy_Associated _death	Is this death pregnancy- associated? The death of a woman while pregnant or within one year of end of pregnancy (including spontaneous or medical abortion, miscarriage, live birth or fetal death/stillbirth) from any cause related to or aggravated by her pregnancy or its management, but not from accidental or incidental causes. From 2011-2015, this flag was created from Maternal Mortality and Morbidity Review Committee data system. Cases were identified through mandatory hospital report and linking birth and fetal death certificates to death certificates. Starting in 2016, this flag will come from Maternal Mortality and Morbidity Review Committee (MMRIA). In MMRIA data system, Pregnancy-associated deaths are identified by linking birth certificate/fetal death to death records and ICD codes/literal cause/pregnancy check box in death certificate started including pregnancy check box. Match_level_FD	CHIA Match level	1= These are members within the APCD that received a high score against the DPH input record. Candidates in this group are those that perfectly matched all elements of the DPH input record and those that generally had only one element mismatch. The threshold applied to group 1 candidates has been optimized based upon the input elements and their overall weight in determining a unique individual match. 2=This group contains members within the APCD that received a lower score against the DPH input record yet are considered possible matches. Candidates in this group could match on as little as SSN or date of birth and first name. These candidates are included for completeness.	Num

V2 Data: Case Definitions for Opioid-Related Incidents in MATRIS

Suspected opioid-related EMS incidents (ORIs) were identified through a three stage process.

Stage 1: Defining EMS incidents included

Only EMS incidents meeting the following criteria were included in the analysis:

- In order to include only emergency responses and exclude incidents between health facilities, only EMS incidents involving 911 calls were included in the analysis.
- Remove transports where chief complaint is 'dialysis'
- Remove transports where the incident state or incident county is not in Massachusetts

Stage 2: Define EMS incidents that are not suspected opioid-related EMS incidents (ORIs)

In order to reduce false positive, an EMS incident was not classified as an ORI if it met any of the following criteria:

- Do not classify as an ORI when the EMS transport is not related to an emergency but involves transporting a patient or a Section 12. (Note: These transports are listed incorrectly as 911 responses)
 - "section 12", "sect 12", or "sec 12" (narrative, chief complaint, secondary complaint, other complaint)
 - "transport only" (chief complaint, secondary complaint, other complaint)
- Do not classify as an ORI when EMS incident is primarily related to a traffic issue/crash.
 - "traffic" (chief complaint, secondary complaint, other complaint)
- Do not classify as an ORI when the EMS incident is responding to a suspected alcohol poisonings.
 - The words "poison" occurs AND either of the following two words are present "Alcohol" and "etoh" (chief complaint, secondary complaint, other complaint)
- Do not classify as an ORI if EMS administered fentanyl unless the incidents meets inclusion category 3
 or 4.

Stage 3: Prioritizing criteria

• Criteria indicates which criteria is run first (i.e., cases are selected based on Criteria 1 and then cases not selected are examined using Criteria 2)

V3 Data: Case Definitions for Opioid-Related Incidents in MATRIS

Suspected opioid-related EMS incidents (ORIs) were identified through a three stage process.

Stage 1: Defining EMS incidents included

Only EMS incidents meeting the following criteria were included in the analysis:

- In order to include only emergency responses and exclude incidents between health facilities, only EMS incidents involving 911 calls were included in the analysis.
- Remove transports where chief complaint is 'dialysis'
- Remove transports where the incident state or incident county is not in Massachusetts

Stage 2: Define EMS incidents that are not suspected opioid-related EMS incidents (ORIs)

In order to reduce false positive, an EMS incident was not classified as an ORI if it met any of the following criteria:

- Do not classify as an ORI when the EMS transport is not related to an emergency but involves transporting a patient or a Section 12. (Note: These transports are listed incorrectly as 911 responses)
 - "section 12", "sect 12", or "sec 12" (narrative, chief complaint, secondary complaint, other complaint)
 - "transport only" (chief complaint, secondary complaint, other complaint)
- Do not classify as an ORI when EMS incident is primarily related to a traffic issue/crash.
 - "traffic" (chief complaint, secondary complaint, other complaint)
- Do not classify as an ORI when the EMS incident is responding to a suspected alcohol poisonings.
 - The words "poison" occurs AND either of the following two words are present "Alcohol" and "etoh" (chief complaint, secondary complaint, other complaint)
- Do not classify as an ORI if EMS administered fentanyl unless the incidents meets inclusion category 3 or 4.

Stage 3: Prioritizing criteria

• Criteria indicates which criteria is run first (i.e., cases are selected based on Criteria 1 and then cases not selected are examined using Criteria 2)

EMS Opioid Incidents Categorization

Documentation reviewing the 5 buckets of Opioid-Involved EMS cases in MATRIS that DPH currently tracks and reports on. Last update Sept 18, 2019

Please note – buckets are filled in a cascade. Once a case is filtered into a bucket (which are searched for in the order presented below) it is not re-examined for another bucket EXCEPT for Acute ODs that are <u>only found</u> by a positive response to naloxone – those can be re-categorized to Intoxicated or Withdrawal depending on symptom presentation

1. DOA Bucket

- a. Covers opioid overdoses in which the patient is declared dead on arrival, dies before transport, or where resuscitative efforts are terminated (because the patient is non-viable)
- b. It is important to note that BLS can only declare death when there are obvious signs (such as rigor mortis or dependent lividity) or conditions inconsistent with life, so they may transport patients who would otherwise have been declared dead by another care provider (i.e. transport to a hospital does not mean the patient is still alive)
- c. Search terms:

PT_DISPOSITION=2 (this means the patient is DOA) OR

Narrative report contains one of the following

And patient cannot have a destination_type of "Hospital"
Doa, d.o.a, dead on arrival
Time of death, determination of death, time of
declaration
deceased
order(s) for (field) termination, permission to stop
effort, cessation of resuscitation
Obvious signs of death, obvious death
Nonviable, non viable, non-viable

OR

Narrative report contains one from Column A and one from Column B: And patient cannot have a destination_type of "Hospital".	
Column A	Column B
cardiac arrest, no pulse, pulse less, pulseless, asystole, asystolic	Dead (excludes 'dead end')
cold to (the) touch	Death (excludes 'risk(s) of refusal', 'refusal obtain')
Apneic, apneic	
mottl, rigor, mortis, livid (excludes 'no mottl', 'no rigor', 'no mortis', 'no livid')	

2. Acute Overdose Bucket

- a. Covers acute opioid overdoses, which are defined as opioid overdoses in which the patient would not likely survive on their own without intervention (whether bystander or EMS intervention).
 - i. Please note Acute Overdoses do not necessarily survive even with intervention, and transport to hospital does not mean the patient is still alive
- b. Symptoms can include respiratory failure, loss of consciousness, blue/pale/cold skin, and cardiac failure
- c. Search terms:

If the patient gets naloxone from the EMS and has a positive improvement (please note, if this is the only identifying feature for Acute OD that is found for the patient then the patient would be regrouped to Intoxicated or Withdrawal if it meets those search terms)

OR

If the patient has opioid intoxication symptoms (outlined in section 3) and had naloxone administered by prior aid

3. Opioid Intoxicated Bucket

- a. Patients who are on opioids and displaying symptoms including bradycardia, hypothermia, sedation, pinpoint pupils, slurred speech, and head nodding
 - i. Intoxication is distinguished from acute overdose in that patients are likely to survive even without intervention
- b. Will override acute OD cases that were only selected because of positive response to naloxone and regroup them to intoxicated if the search terms are met

- a. Patients in the opioid detox bucket include those who intentionally or unintentionally are experiencing symptoms of opioid withdrawal
- b. These symptoms include tachycardia, tachypnea, chills, tremors, vomiting, nausea, sweating, shaking, hypertension, and anxiety.

- a. This remaining bucket covers all other EMS calls in which opioids were involved but they do not fall into one of the above categories.
- b. Some examples of the most common types of calls that are in this bucket include:
 - i. Suicide attempts in which opioids are used
 - ii. Calls where patient symptoms involve multiple or unknown drug mixes
 - iii. Mental health-related calls where substance use is a comorbidity

Case Definitions for Suspected Stimulant-Related Incidents in MATRIS

Suspected stimulant-related EMS incidents (SRIs) were identified through a three-stage process.

Stage 1: Defining EMS incidents included.

Only EMS incidents meeting the following criteria were included in the analysis:

- In order to include only emergency responses and exclude incidents between health facilities, only EMS incidents involving 911 calls were included in the analysis.
- Remove transports where chief complaint is 'dialysis'.
- Remove transports where the incident state or incident county is not in Massachusetts.

Stage 2: Define EMS incidents that are not suspected stimulant-related EMS incidents (SRIs)

In order to reduce false positives, an EMS incident was not classified as an SRI if it met any of the following criteria:

• Do not classify as an SRI when the EMS transport is not related to an emergency but involves transporting a patient or a Section 12. (Note: These transports are listed incorrectly as 911 responses)

- "section 12", "sect 12", or "sec 12" (narrative, chief complaint, secondary complaint, other complaint)
- "transport only" (chief complaint, secondary complaint, other complaint)
- Do not review events for Levels 2 or 3 in patients younger than 15 as the degree of misclassification is too high

Stage 3: Determine Level

- Level indicates which category the run falls in definitions for each level are provided below. Runs can meet the criteria of and be counted it multiple levels.
- All Criteria hold the same weight, they are separated for coding and search purposed only.

Dataset explanation:

This dataset covers all instances of buprenorphine, methadone, and naltrexone (commonly referred to as Medications for Opioid Use Disorder, or MOUD) found in the PHD (process summary section below details these sources). The segments have a start and end date, as well as the MOUD type that the individual was taking. Within an MOUD type, the segments are non-overlapping in an individual; this means if there is a gap between segments of the same MOUD type within an individual, they <u>may have</u> been experiencing a gap in MOUD use. They may also have been receiving MOUD from a source we do not capture in the PHD. This dataset is complete through the last full year of all datasets used to identify MOUD (currently 2022).

Important Considerations:

• All Naltrexone found in the PHD has been included in this dataset. <u>Naltrexone can be used in the treatment of Alcohol Use Disorder (as well as being a MOUD)</u>. To correctly determine if the

Naltrexone in this dataset is being used as a MOUD, you MUST establish OUD in an individual prior to the Naltrexone.

- Some of the periods identified as methadone may not actually be methadone. Methadone data
 in BSAS is determined by a process of elimination as BSAS programs can dispense any of the
 forms of MOUD. BSAS program records are crossed against sources of Buprenorphine and
 Naltrexone in the PHD; if no record can be found in either Buprenorphine or Naltrexone sources,
 then the MOUD being administered is Likely Methadone.
- These records are incomplete for inpatient and residential settings (including hospital stays, incarceration periods, and institutional settings).
- Please note that the segments in this dataset reflect optimal medication adherence.
 - 1. A record in this dataset means that a prescription has been filled but cannot determine if it was ingested or taken as prescribed.
 - 2. The prescription data in this dataset has start and end dates that credit remaining supply from an earlier fill. This means if an individual refills a prescription while still having pills left from an earlier fill, the start date of that refill is shifted forward to reflect an individual not starting the new supply until all pills in the original supply are used.

Process Summary:

- Buprenorphine can be found in:
 - PMP buprenorphine data (limited to where BUP_CAT_PMP=1 and there is at least 1 day of supply)
 - APCD records
 - Medical Claims where one of the following HCPCS codes was identified: G2068, G2069, G2070, G2072, G2079, J0570, J0571, J0572, J0573, J0574, J0575, J0592, Q9991, Q9992
 - Pharmacy Claims with any of the NDCs identified from the PMP dataset as being buprenorphine for MOUD and where there is at least 1 day of supply.
 - BSAS records of MOUD while in an HOC indicate that an individual was receiving Buprenorphine.

Naltrexone

- APCD records
 - Medical Claims where one of the following HCPCS codes was identified: J2315, G2073 or one of the following ICD 10 Procedure codes was identified: HZ84ZZZ, HZ94ZZZ
 - Pharmacy Claims with any of the NDCs identified in the appendix below and where there is at least 1 day of supply.
- BSAS records of MOUD while in an HOC indicate that an individual was receiving Naltrexone.
- DOC records that an individual was enrolled in the MATRI program.
- Methadone
 - APCD records

- Medical Claims where one of the following HCPCS codes was identified: H0020, G2067, G2078, S0109 or one of the following ICD 10 Procedure codes was identified: HZ81ZZZ, HZ91ZZZ
- BSAS MOUD program records where buprenorphine and naltrexone have been ruled
- BSAS records of MOUD while in an HOC indicate that an individual was receiving Methadone.

 - 3. phdcm.hd & phdcm.hd_diag
 - 4. Combine all casemix and check for ODs same day and 1 day apart between datasets
 - 4. phdems.matris
 - 5. Combine CM and Matris, remove CM event the day after as dup
 - 6. phddeath.death overdose death counted as final OD and deaths are flagged.
 - 7. check for deaths 0-3 days after cm/matris overdose, assumed to be same event so add death record to overdose(will be 0-3 days later) and count as only one overdose. Where an overdose occurred 1-3 days before death both the overdose date and death dates are in the same record and counted as one overdose.
