## APCD – Member Eligibility Member Months Analytic File Data Dictionary (PHDAPCD.ME\_MTH)

### What is an ME Monthly File? Why can't I just use the ME Full File?

Each eligibility submission to CHIA includes coverage segments of time that touch the 24-month rolling window designated for each submission (i.e., the June 2020 eligibility submission captures eligibility and coverage between July 2018 and June 2020). Additionally, coverage segments may be repeated within a single submission to capture changes in other attributes. Finally, the rolling 24-month submission period of each submission overlaps with the preceding quarterly submission by 21 months, in some cases stating an updated view of eligibility and coverage for some members. The ME Full File (PHDAPCD.ME) contains all this information, making it hard to untangle what is the best information per individual per month.

PLEASE NOTE: Because CHIA continues to receive and update ME information for 24-month windows, the ME file is subject to change until the 24-month window is closed. For this current extract, data in July 2021 and onwards will be updated as new information arrives in the next extract.

The ME Monthly file (PHDAPCD.ME\_MTH) has transformed the eligibility submissions into monthly data, to support the following via CHIA's prioritization logic:

- Unique counting of member months, capturing a single eligibility and coverage story for each member during each month they have coverage.
- Sourcing a month of eligibility from the best source of truth available (i.e., the best submission).

For each ME\_MEM\_MONTH & ME\_MEM\_YEAR, the PHDAPCD.ME\_MTH file will contain one record that covers the primary medical insurance an individual had on the 15<sup>th</sup> of the month.

### How do I link the ME Monthly File (PHDAPCD.ME\_MTH) to the ME Full Dataset (PHDAPCD.ME)?

To link the ME Monthly File to the ME Full Dataset you must combine them on ME\_MEMELGID & ME\_SUBCONTROLID. Below is suggested code:

```
proc sort data= PHDAPCD.ME out=full;  
by ME_MEMELGID ME_SUBCONTROLID;  
run;
```

```
proc sort data=PHDAPCD.ME_MTH out=month;  
by ME_MEMELGID ME_SUBCONTROLID;  
run;
```

```
data test;  
merge month (in=a) full (in=b);  
by ME_MEMELGID ME_SUBCONTROLID;  
if a=1 and b=1;  
run;
```
