

MA Prescription Monitoring Program County-Level Data Measures (Calendar Year 2021 Quarter 2 and Quarter 3)

Massachusetts Department of Public Health, Bureau of Health Professions Licensure ● October 2021

The Department of Public Health's (DPH) Prescription Drug Monitoring Program (PMP) serves as a repository of data for all prescription drugs dispensed statewide, including those prescriptions that are sought after for illicit and non-medical use and thus represent the highest potential for abuse (federal Schedules II – V, including certain narcotics, stimulants and sedatives). The PMP also enables prescribers and dispensers to access a patient's prescription history and can be used as a clinical decision-making tool, allowing the provider to have a holistic view of the patient's medications.

When interpreting PMP county-level data, it is important to emphasize that increases or decreases in a single measure may not indicate an increase or decrease in prescription misuse or abuse. Put simply, use does not always equate to abuse. There are many factors that might explain an unusually high rate of prescribing in a given area. For instance, an area which contains a large number of residents in long-term care facilities may result in a high rate of opioid prescribing.

These datasets inform critical discussions about opioid prescribing, provide an important baseline to better inform future policy decisions and allow the state and stakeholders to more meaningfully measure whether policy initiatives are effective.

Effective October 6, 2014, all hydrocodone combination drug (HCD) products (e.g., Vicodin) were reclassified from Schedule III to Schedule II. This reclassification during the last quarter of 2014 makes comparisons over time difficult to interpret. Beginning with CY 2015 data, reports of Schedule II products will include all HCD prescriptions.

Individuals with activity of concern "thresholds" for this report are based on a 3-month time period. MDPH has previously released annual county-level reports that provide thresholds based on a 12-month time period. Although the numbers (or rates) generated may appear to be comparable, they represent different time periods and are **NOT** an apples-to-apples comparison. The results are only comparable when the thresholds (e.g., 4 different providers and 4 different pharmacies), time interval (e.g. over a three-month period), and drug products analyzed (e.g. Schedule II opioids) are the same. Meaning, the total number (or rates) of individuals who received Schedule II-V opioid prescriptions from 4 or more providers and had them filled at 4 or more pharmacies in a 3-month period cannot and should not be compared with the total number of individuals (or rates) who received Schedule II-V opioid prescriptions from 4 or more providers and had them filled at 4 or more pharmacies in a 12-month period.

MA Prescription Monitoring Program April – June 2021 and July-September 2021

April - June 2021 (Quarter 2)

County (County classifications are by patient zip code; patient state must also = MA)	Census Population*	Total Schedule II Opioid Prescriptions	Total Number of Schedule II Opioid Solid Dosage Units	Individuals Receiving Schedule II Opioid Prescription	% of Individuals Receiving Schedule II Opioid Prescription (of total population)	Individuals with Activity of Concern	Rate of Individuals with Activity of Concern (per 1,000)
Barnstable	216,629	20,990	1,032,900	9,103	4.2	<5	NR
Berkshire	126,398	11,449	564,078	5,075	4.0	<5	NR
Bristol	571,424	56,657	3,294,292	22,974	4.0	7	0.3
Dukes	17,404	1,228	63,868	604	3.5	<5	NR
Essex	796,916	57,320	2,787,063	26,921	3.4	9	0.3
Franklin	71,169	7,109	407,260	2,856	4.0	<5	NR
Hampden	470,869	43,178	2,362,157	18,904	4.0	10	0.5
Hampshire	163,997	13,550	789,672	5,590	3.4	<5	NR
Middlesex	1,626,553	82,044	3,885,235	41,791	2.6	20	0.5
Nantucket	11,416	732	34,852	337	3.0	<5	NR
Norfolk	715,271	43,125	2,218,605	20,566	2.9	12	0.6
Plymouth	527,689	42,658	2,313,774	19,407	3.7	10	0.5
Suffolk	809,594	38,462	2,097,551	18,072	2.2	11	0.6
Worcester	839,053	63,620	3,600,283	28,359	3.4	22	0.8
MA	6,964,382	482,122	25,451,590	219,638	3.2	114	0.5

Note 1: Individuals with activity of concern "thresholds" for this report are based ONLY on a 3-month time period; see notes on previous page; CY2021-Q2

Note 2: Counts greater than 0 but less than 5 are not reported. Rates based on these small values also are not reported (NR).

Note 3: Rates of individuals with activity of concern are based on the population of individuals who have received one or more Schedule II opioid prescriptions during the specified time period.

Note 4: Totals for all counties combined exclude a small number of prescription records that could not be assigned a county due to inaccurate zip code/city town information reported to the program.

Note 5: The total sum for the "Number of Individuals Receiving Schedule II Opioid Prescription" will be slightly different than the sum presented for the state in Figure 2 due to a small number of double counting of individuals moving from one county to another during the specified time period.

Note 6: PMP data are preliminary and subject to updates. The MA PMP database is continuously updated to allow for prescription record correction data submitted by pharmacies. The data were extracted on 10/13/2021; Release Date: Oct 2021.

Note 7: Beginning in 3rd quarter of 2016 the Department of Veteran's Affairs (VA) facilities began submitting data to the MA PMP.

Note 8: Population estimates used for years following the decennial census were developed by the University of Massachusetts Donahue Institute (UMDI) in partnership with the Massachusetts Department of Public Health, Bureau of Environmental Health.

July - September 2021 (Quarter 3)

County (County classifications are by patient zip code; patient state must also = MA)	Census Population*	Total Schedule II Opioid Prescriptions	Total Number of Schedule II Opioid Solid Dosage Units	Individuals Receiving Schedule II Opioid Prescription	% of Individuals Receiving Schedule II Opioid Prescription (of total population)	Individuals with Activity of Concern	Rate of Individuals with Activity of Concern (per 1,000)
Barnstable	216,629	20,740	1,016,522	8,899	4.1	<5	NR
Berkshire	126,398	11,557	581,165	4,993	4.0	7	1.4

Suffolk	809,594	37,377	2,086,992	17,196	2.1	16	0.9
Worcester	839,053	62,139	3,581,814	27,355	3.3	16	0.6
MA	6,964,382	468,711	25,240,038	210,841	3.0	125	0.6

Note 1: Individuals with activity of concern "thresholds" for this report are based ONLY on a 3-month time period; see notes on previous page; CY2021-Q3

Note 2: Counts greater than 0 but less than 5 are not reported. Rates based on these small values also are not reported (NR).

Note 3: Rates of individuals with activity of concern are based on the population of individuals who have received one or more Schedule II opioid prescriptions during the specified time period.

Note 4: Totals for all counties combined exclude a small number of prescription records that could not be assigned a county due to inaccurate zip code/city town information reported to the program.

Note 5: The total sum for the "Number of Individuals Receiving Schedule II Opioid Prescription" will be slightly different than the sum presented for the state in Figure 2 due to a small number of double counting of individuals moving from one county to another during the specified time period.

Note 6: PMP data are preliminary and subject to updates. The MA PMP database is continuously updated to allow for prescription record correction data submitted by pharmacies. This data were extracted on 10/13/2021; Release Date: Oct 2021.

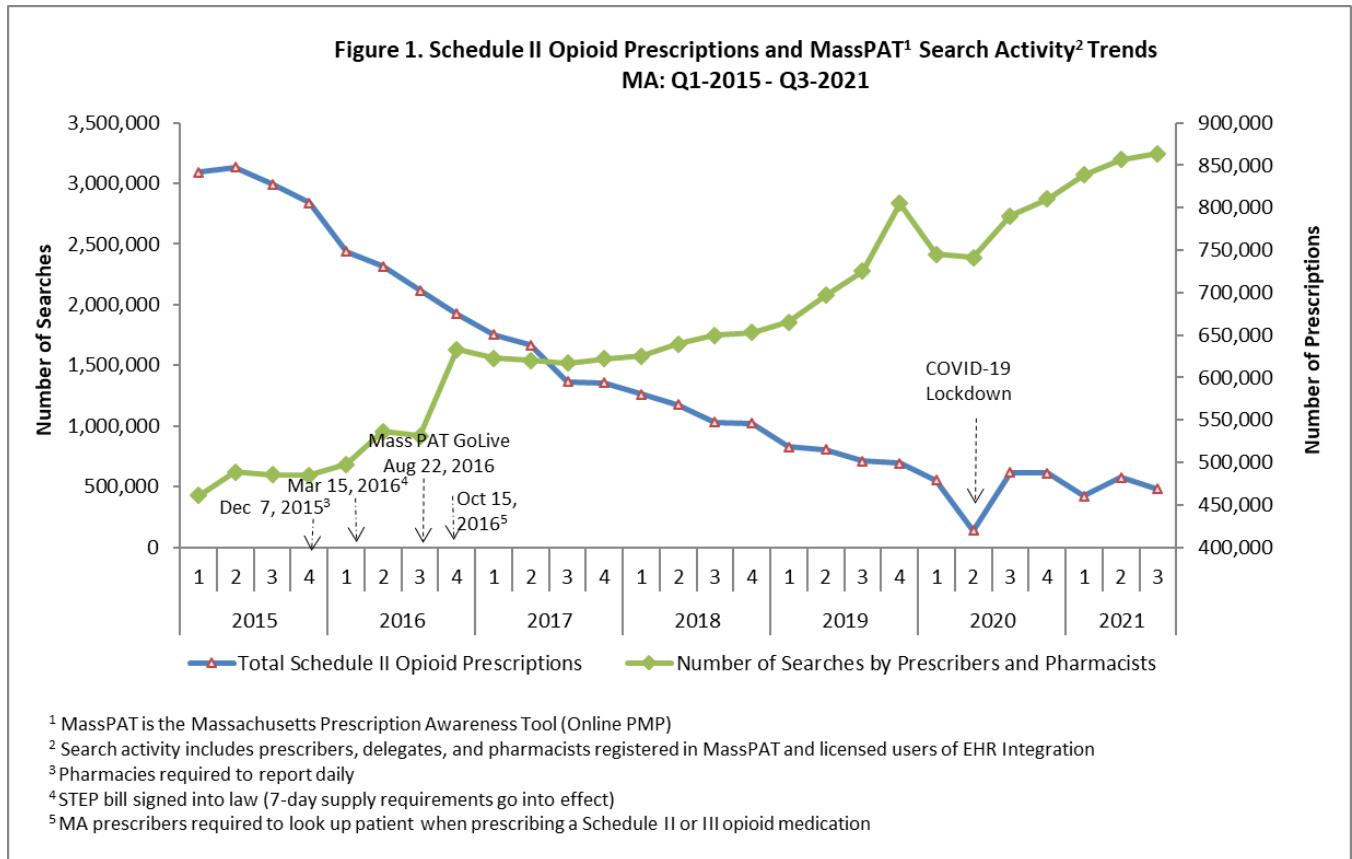

Note 7: Beginning in 3rd quarter of 2016 the Department of Veteran's Affairs (VA) facilities began submitting data to the MA PMP.

Note 8: Population estimates used for years following the decennial census were developed by the University of Massachusetts Donahue Institute (UMDI) in partnership with the Massachusetts Department of Public Health, Bureau of Environmental Health.

MA Prescription Monitoring Program Data

Trend Analyses for Schedule II Opioids Only

- Registered MassPAT providers conducted nearly 3.2 million searches in 2nd Quarter of 2021 and over 3.2 million searches in the 3rd Quarter of 2021; there was a total increase of approximately 50,000 searches from the 2nd Quarter of 2020 to the 3rd Quarter of 2021.
- In the 2nd Quarter of 2021, there were approximately 482,000 Schedule II opioid prescriptions reported to the MA PMP; this is a small increase from the previous quarter and almost a 43% decrease from the 1st Quarter of 2015. (n = 841,990 Schedule II opioid prescriptions).
- In the 3rd Quarter of 2021, there were just under 469,000 Schedule II opioid prescriptions reported to the MA PMP; this is a small decrease from the previous quarter and just over a 44% decrease from the 1st Quarter of 2015. (n = 841,990 Schedule II opioid prescriptions).

Note: PMP data are subject to updates. The MA PMP database is continuously updated to allow for prescription record correction data submitted by pharmacies. The data for CY2021 Q2 and CY2021 Q3 were extracted on 10/13/2021.
