Re: SREC-II Policy Design Comments

Thank you for recognizing the positive economic and environmental attributes of professional roof mounted commercial solar. In addition to traditional roof mounted solar systems, IRC Solar Roof Systems would like to recommend that the Massachusetts DOER recognize carports as eligible for the higher incentivized levels of the SREC II program.

Utilizing existing rooftops, landfills, brownfields and parking lots (carports) as targeted locations for commercial solar makes sense for customers, ratepayers and the general public.

Regards,

Kurt Penney
