BSUM: Board of Probation Summary Query

Description: Used to search the files maintained by the Massachusetts Board of Probation (BOP) for summary information about individuals with qualifying court activity, including a high level summary of the content of their Board of Probation (BOP) or central probation record.

Source: MA AOTC **Transaction Type:** Request/Response

Input: Input Group(s):

- Person: Last Name (mandatory), First Name (mandatory), Date of Birth (mandatory)

See the sample Request XML for additional information.

Output: Returns a candidates list of records that match the criteria specified. Each candidate record will display a number of flags that summarize the content of the BOP file.

See the sample Response XML for additional information.

Follow-Up: - BOP2P: You may run a follow-up query to retrieve the detail record for a candidate.

Notes: Update Frequency: The BOP file is updated once every 24 hours, so the query results are not necessarily "real-time" data.

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Last Name	Person	1	50	String	Smith	
First Name	Person	1	50	String	John	
Date of Birth	Person	10	10	Date {CCYY-MM-DD}	1950-10-18	
Last Name	Person	1	50	String	Smith	
First Name	Person	1	50	String	John	
Date of Birth	Person	10	10	Date {CCYY-MM-DD}	1950-10-18	
Surrogate ID	Person	1	Unrestricted	String	12345	See the 'Follow-Up' section for additional info.

BOP2P: Board of Probation Query - Detail

Description: Used to search the compiled Massachusetts criminal history records for an individual (often referred to as a persons' Board of Probation (BOP) or "central probation record").

Source: MA AOTC **Transaction Type:** Request/Response

Input: Input Group(s):

- Unique Identifier: PCF Number (mandatory)

See the sample Request XML for additional information.

Output: Returns a detail BOP record for the PCF specified.

See the sample Response XML for additional information.

Follow-Up: None

Notes: Update Frequency: The BOP file is updated once every 24 hours, so the query results are not necessarily "real-time" data.

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
PCF Number	Unique Identifier	1	11	String	1234567890	

WMS1: Warrant Record Query – Candidate List

Description: Used to search for all the active Massachusetts court warrants by person and court information.

Source: MA AOTC **Transaction Type:** Request/Response

Input: This query can be run using different groupings of elements called input groups. The specific elements allowed and required to execute the query vary by input group as follows:

- Person: Last Name (mandatory), First Name (mandatory), Date of Birth (optional), Person Surrogate ID (optional)

Note: You may execute the query using one input group at a time. Please do not mix and match elements from different input groups.

See the sample Request XML for additional information.

Output: Returns a limited set of potential candidates in each result set.

See the sample Response XML for additional information.

Follow-Up: WMS1 (for additional candidates): You may execute a follow-up query to see additional matching records using information from the original request as well as information returned in the response. To get the next set of matching candidates, take the PersonSurrogate from the WMS1 response, and use this as the input value for another WMS1 query along with the original input for First Name and Last Name. If no additional results are available, the PersonSurrogate tag will not be part of the response.

WMSD (for detail record): To retrieve the full warrant detail record of a candidate, you may run a WMSD query. Take the "CourtOrderIssuingCourt/OrganizationID/ID" and "CaseDocketID/ID" values from the candidate whose record you would like to see, and use them as the Court Number and Docket Number input values in WMSD query. See the WMSD query for additional information.

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Last Name	Person	1	50	String	Smith	
First Name	Person	1	50	String	John	
Person Surrogate ID	Person	1	Unrestricted	String	012345	See the 'Follow-Up' section for additional info.
Date of Birth	Person	10	10	Date {CCYY-MM-DD}	1950-10-18	

WMSD: Warrant Record Query – Detail

Description: Used to search for an active Massachusetts court warrants by court information.

Source: MA AOTC **Transaction Type:** Request/Response

Input: Input Group(s):

- Unique Identifier: Court Number (mandatory), Docket Number (mandatory)

See the sample Request XML for additional information.

Output: Returns a detailed warrant record for the information specified.

See the sample Response XML for additional information.

Follow-Up: None

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Court Number	Unique Identifier	1	10	String	00	
Docket Number	Unique Identifier	1	20	String	12345678901234	

BOPFI1: License to Carry/Firearms Identification Card Query - Candidate List

Description: Used to search the Massachusetts Instant Record Check System (MIRCS) for information about individuals with a Massachusetts License to Carry/Firearms Identification Card by person or address information.

Source: MA DCJIS **Transaction Type:** Request/Response

Input: Input Group(s):

- Person: Last Name (mandatory), First Name (mandatory), Date of Birth (optional)
- Address: Street Number (optional), Street Name (mandatory), City Name (mandatory), State Code (optional), Postal Code (optional)

See the sample Request XML for additional information.

Output: Returns a list of potential matching candidates for the criteria specified.

See the sample Response XML for additional information.

Follow-Up: - BOPFI2: You may run a follow-up query to retrieve the detail record for a candidate in the candidate list.

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Last Name	Person	1	50	String	Smith	
First Name	Person	1	50	String	John	
Date of Birth	Person	10	10	Date {CCYY-MM-DD}	1950-10-18	
Street Number	Address	1	10	String	1	
Street Name	Address	1	100	String	Main Street	
City Name	Address	1	50	String	Boston	
State Code	Address	2	2	String	MA	
Postal Code	Address	5	5	String	02101	

BOPFI2: License to Carry/Firearms Identification Card Query - Detail

Description: Used to search the Massachusetts Instant Record Check System (MIRCS) for information about individuals with a Massachusetts License to Carry/Firearms Identification Card by a key identifier.

Source: MA DCJIS **Transaction Type:** Request/Response

Input: Input Group(s):

- Unique Identifier: Person Surrogate Identifier (mandatory)

See the sample Request XML for additional information.

Output: Returns a list of potential matching candidates.

See the sample Response XML for additional information.

Follow-Up: None

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Person Surrogate Identifier	Unique Identifier	1	Unrestricted	String	77C444033C5232 3633544C453307 C7A31393571347 C7C4	Returned in the output of BOPFI1 query

FSI1: Firearms Ownership Query - Candidate List

Description: Used to search the Massachusetts Instant Record Check System (MIRCS) for information about owners of firearms in Massachusetts by various person criteria or firearm serial number information.

Source: MA DCJIS **Transaction Type:** Request/Response

Input: Input Group(s):

- Person: Last Name (mandatory), First Name (mandatory), Date of Birth (optional)
- Firearm: Serial Number (mandatory), Firearm Make (optional), Firearm Caliber (optional)
- Address: Street Number (optional), Street Name (mandatory), City Name (mandatory)

See the sample Request XML for additional information.

Output: Returns a list of potential matching candidates.

See the sample Response XML for additional information.

Follow-Up: - FSI2: You may run a follow-up query to retrieve the detail record for a candidate in the candidate list.

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Last Name	Person	1	50	String	Smith	
First Name	Person	1	50	String	John	
Date of Birth	Person	10	10	Date {CCYY-MM-DD}	1950-10-18	
Street Number	Address	1	10	String	1	
Street Name	Address	1	100	String	Main Street	
City Name	Address	1	50	String	Boston	
Serial Number	Firearm	1	50	String	123456789	
Firearm Make	Firearm	1	50	String	AAC	
Firearm Caliber	Firearm	1	20	String	10	

FSI2: Firearms Ownership Query - Detail

Description: Used to search the Massachusetts Instant Record Check System (MIRCS) for information about owners of firearms in Massachusetts by Transaction Number.

Source: MA DCJIS **Transaction Type:** Request/Response

Input: Input Group(s):

- Unique Identifier: Firearm Transaction Comp Number (mandatory)

See the sample Request XML for additional information.

Output: Returns a detailed record for the transaction number specified.

See the sample Response XML for additional information.

Follow-Up: None

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Firearm Transaction Comp Number	Unique Identifier	1	20	String	123456789	

SUI1: Suicide Record Query - Candidate List

Description: Used to search for records of individuals who threaten or attempt suicide while in police custody.

Source: MA DCJIS **Transaction Type:** Request/Response

Input: Input Group(s):

- Person: Last Name (mandatory), First Name (mandatory), Date of Birth (mandatory)

See the sample Request XML for additional information.

Output: Returns a list of potential candidates.

See the sample Response XML for additional information.

Follow-Up: - SUI2: You may run a follow-up query to retrieve the detail record for a candidate in the candidate list.

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Person Last Name	Person	1	50	String	Smith	
Person First Name	Person	1	50	String	John	
Person Date of Birth	Person	10	10	Date {CCYY-MM-DD}	1950-10-18	

SUI2: Suicide Record Query - Detail

Description: Used to search for records of individuals who threaten or attempt suicide while in police custody.

Source: MA DCJIS **Transaction Type:** Request/Response

Input: Input Group(s):

- Unique Identifier: Suicide Risk ID (mandatory)

See the sample Request XML for additional information.

Output: Returns a detail suicide attempt record for the unique identifier specified.

See the sample Response XML for additional information.

Follow-Up: None

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Suicide Risk ID	Unique Identifier	8	8	String	1234567890	

SX1: Sex Offender Query – Candidate List

Description: Used to search for information about known Massachusetts sex offenders by offender name and DOB or address information.

Source: MA SORB **Transaction Type:** Request/Response

Input: Input Group(s):

- Person: Last Name (mandatory), First Name (mandatory), Date of Birth (optional)

- Address: Street Number (optional), Street Name (mandatory), City Name (mandatory), State Code (optional), Postal Code (optional)

See the sample Request XML for additional information.

Output: Returns a list of potential matching candidates.

See the sample Response XML for additional information.

Follow-Up: - SX2: You may run a follow-up query to retrieve the detail record for a candidate in the candidate list.

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Last Name	Person	1	50	String	Smith	
First Name	Person	1	50	String	John	
Date of Birth	Person	10	10	Date {CCYY-MM-DD}	1950-10-18	
Street Number	Address	1	10	String	1	
Street Name	Address	1	100	String	Main Street	
City Name	Address	1	50	String	Boston	
State Code	Address	2	2	String	MA	Values: Should be a valid state code.
Postal Code	Address	5	5	String	02101	

SX2: Sex Offender Query - Detail

Description: Used to search for information about a known Massachusetts sex offender by a unique identifier, the sex offender number (SON).

Source: MA SORB **Transaction Type:** Request/Response

Input: Input Group(s):

Unique Identifier: SON (mandatory)

See the sample Request XML for additional information.

Output: Returns a detail sex offender record for the SON specified.

See the sample Response XML for additional information.

Follow-Up: None

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
SON	Unique Identifier	1	10	String	12345	

RQF: Recent Query Files

Description: Used to search the Massachusetts Criminal Justice Information System for queries run on a vehicle in the past 90 days.

Source: MA DCJIS **Transaction Type:** Request/Response

Input: Input Group(s):

- Plate: Plate Number (mandatory)

- VIN: VIN (mandatory)

See the sample Request XML for additional information.

Output: Returns a detailed record that contains the matching query in a single, text based element.

See the sample Response XML for additional information.

Follow-Up: None

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Plate Number	Plate	1	10	String	123456	
VIN	VIN	1	20	String	99112233445566778	

R1: RMV License Query - Detail

Description: Use to search for Massachusetts driver's license information by key person identifiers.

Source: MA RMV **Transaction Type:** Request/Response

Input: Input Group(s):

- SSN: Social Security Number (mandatory)

- OLN: Operator License Number (mandatory)

See the sample Request XML for additional information.

Output: Returns a detailed driver's license record for the identifier specified.

See the sample Response XML for additional information.

Follow-Up: RI (for license image): You may execute a RI query as a follow-up to the R1. To do so, take the "PersonRMVSurrogateID" value from the R1 response and use this as the input value for the RI query. See the RI query for additional information.

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Operator License Number	OLN	9	9	String	123456789	
Social Security Number	SSN	9	9	Numeric	123456789	

RI: RMV License Image Query

Description: Used to search for a Massachusetts driver's license photograph. This query uses information from the driver's license record and must be run subsequent to a R1 - RMV License Query By Key Identifiers.

Source: MA RMV **Transaction Type:** Request/Response

Input: Input Group(s):

- Unique Identifier: Person Surrogate ID (mandatory)

See the sample Request XML for additional information.

Output: A photograph of the license holder.

See the sample Response XML for additional information.

Follow-Up: None

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Person Surrogate ID	Mandatory	8	8	String	12346F0A	This value is contained in a Driver license record and can be taken from a R1 query result.

R3: RMV License Query - Candidate List

Description: Used to search for Massachusetts driver's license information by person name (partial name search) and DOB (if known).

Source: MA RMV **Transaction Type:** Request/Response

Input: Input Group(s):

- Person: Last Name (mandatory), First Name (optional), Middle Initial (optional), Date of Birth (optional), Next Alias (optional), Next Person (optional)

See the sample Request XML for additional information.

Output: Returns a limited set of potential candidates in each result set. A follow-up query can be executed to see additional matching records using information from the original request as well as the response or to view the detailed license information for a particular candidate.

See the sample Response XML for additional information.

Follow-Up: - R3 (for additional candidates): You may execute a follow-up query to see additional matching records using information from the original request as well as information returned in the response. To get the next set of potential candidates, take the "NextMatchingCandidateName" and "NextMatchingCandidateAliasName" values and use them as the Next Person and Next Alias input values in the follow-up R3. In addition to the "NextMatching" values, you will also need to re-use your exact initial query parameters.

- R1 (for detail record): To retrieve the full license record of a candidate, you may run a R1 query. Use the operator license number ("DriverAuthorizationID/ID") from the candidate whose full record you wish to retrieve. Use this as the input value for a R1 query. See the R1 query for additional information.

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Last Name	Person	1	16	String	Smith	
First Name	Person	1	11	String	John	
Middle Initial	Person	1	1	String	A	
Date of Birth	Person	10	10	Date {CCYY-MM-DD}	1950-10-18	
Next Person	Person	8	8	String	32803159	See the 'Follow-Up' section for additional info.

Next Alias	Person	8	8	String	0FA6EDE0	See the 'Follow-Up' section for additional info.

R5: RMV Registration Query - Detail

Description: Used to search for Massachusetts vehicle registration information by various criteria including vehicle and driver's license information.

Source: MA RMV **Transaction Type:** Request/Response

Input: Input Group(s):

- Plate: Plate Type (mandatory), Plate Number (mandatory), Plate Color (mandatory)

- VIN: VIN (mandatory)

- OLN: Operator License Number (mandatory)

- Title: Title Number (mandatory)

- Vehicle Surrogate: Vehicle Surrogate ID (mandatory)

- Registration Surrogate: Registration Surrogate ID (mandatory)

- Title Surrogate: Title Surrogate ID (mandatory)

- Person Surrogate: Person Surrogate ID (mandatory)

See the sample Request XML for additional information.

Output: Returns a detailed vehicle registration record for the criteria specified.

See the sample Response XML for additional information.

Follow-Up: None

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Plate Type	Plate	3	3	String	PAN	Values: The codes for this input are maintained by the RMV.
Plate Number	Plate	1	7	String	123456	
Plate Color	Plate	1	1	String	G	Values: The codes for this input are maintained by the RMV.

VIN	VIN	1	17	String	99112233445566778	
Title Number	Title	1	8	String	A20211378	
Operator License Number	OLN	9	9	String	123456789	
Vehicle Surrogate ID	Vehicle Surrogate	8	8	String	A0B0C0F0	This value is contained in all of the vehicle registration query responses (R5-R8). This value must be taken from another query response before it can be used as an input value in the R5.
Registration Surrogate ID	Registration Surrogate	8	8	String	020FAB58	This value is contained in all of the vehicle registration query responses (R5-R8). This value must be taken from another query response before it can be used as an input value in the R5.
Title Surrogate ID	Title Surrogate	8	8	String	A20211378	This value is contained in all of the vehicle registration query responses (R5-R8). This value must be taken from another query response before it can be used as an input value in the R5.

Person Surrogate ID	Person Surrogate	8	8	String	F0A12346	This value is contained in all of the vehicle registration query responses (R5-R8). This value must be taken from another query response before it can be used as an input value in the R5.

R6: RMV Registration Query - Candidate List

Description: Used to search for Massachusetts vehicle registration information by a plate number (partial or full) and other information.

Source: MA RMV **Transaction Type:** Request/Response

Input: Input Group(s):

- Plate: Plate Type (optional), Plate Number (mandatory), Plate Color (optional), Registration Status (optional), Registration Surrogate ID (optional)

See the sample Request XML for additional information.

Output: Returns a limited set of potential candidates in each result set. A follow-up query can be executed to see additional matching records using information from the original request as well as the response.

See the sample Response XML for additional information.

Follow-Up: - R6 (for additional candidates): You may execute a follow-up query to see additional matching records using information from the original request as well as information returned in the response. To get the next set of potential candidates, take the "VehicleRegistrationRMVSurrogateID/ID" value from the "NextVehicleRegistrationCandidate" element at the end of the candidate in the list. Use it as the Registration Surrogate ID input value in another R6 query. In addition to the "VehicleRegistrationRMVSurrogateID/ID" value, you will also need to re-use your exact initial query parameters.

- R5 (for detail record): To retrieve the full registration detail record of a candidate, you may run an R5 query. Take the Vehicle Surrogate ID ("VehicleRMVSurrogateID/ID") from the candidate whose full record you wish to retrieve. Use this as the input value for a R5 query. See the R5 query for additional information.

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Plate Type	Plate	3	3	String	PAN	Values: The codes for this input are maintained by the RMV.
Plate Number	Plate	1	7	String	123456	
Plate Color	Plate	1	1	String	R	Values: The codes for this input are maintained by the RMV.

Registration Status	Plate	4	4	String	ACTV	Values: The codes for this input are maintained by the RMV.
Registration Surrogate ID	Plate	8	8	String	0A258B0F	See the 'Follow-Up' section for additional info.

R7: RMV Registration Query - Candidate List

Description: Used to search for Massachusetts vehicle registration information by vehicle identification number.

Source: MA RMV **Transaction Type:** Request/Response

Input: Input Group(s):

- VIN: VIN (mandatory), Vehicle Surrogate ID (optional).

See the sample Request XML for additional information.

Output: Returns a limited set of potential candidates in each result set. A follow-up query can be executed to see additional candidates or a detailed record for a particular candidate using information from the original request as well as the response.

See the sample Response XML for additional information.

Follow-Up: - R7 (for additional candidates): You may execute a follow-up query to see additional matching records using information from the original request as well as information returned in the response. To get the next set of matching candidates, take the "VehicleRMVSurrogateID/ID" value from the "NextVehicleRegistrationCandidate" element at the end of the candidate in the list. Use it as the Vehicle Surrogate ID input value in another R7 query. In addition to the "VehicleRMVSurrogateID/ID" value, you will also need to re-use your exact initial query parameters.

- R5 (for detail record): To retrieve the full registration detail record of a candidate, you may run an R5 query. Take the Vehicle Surrogate ID ("VehicleRMVSurrogateID/ID") from the candidate whose full record you wish to retrieve. Use this as the input value for a R5 query. See the R5 query for additional information.

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
VIN	VIN	1	17	String	99112233445566778	
Vehicle Surrogate ID	VIN	8	8	String	0FFAB00C	See the 'Follow-Up' section for additional info.

R8: RMV Registration Query – Candidate List

Description: Used to search for Massachusetts vehicle registration information by registered owner information.

Source: MA RMV **Transaction Type:** Request/Response

Input: Input Group(s):

- Registered Owner: First Name (optional), Middle Initial (optional), Last Name (mandatory), Date of Birth (optional), Registration Status (optional), Person Surrogate ID (optional), Person Database Key (optional)

See the sample Request XML for additional information.

Output: Returns a limited set of potential candidates in each result set. A follow-up query can be executed to see additional matching records using information from the original request as well as the response.

See the sample Response XML for additional information.

Follow-Up: - R8 (for additional candidates): You may execute a follow-up query to see additional matching records using information from the original request as well as information returned in the response. To get the next set of matching candidates, take the "PersonRMVSurrogateID/ID" and "PersonRMVDataBaseKeyID/ID" values from the "NextVehicleRegistrationCandidate" element at the end of the candidate list. Use them as the input values in another R8 query. In addition to the surrogate ID and Database Key values, you will also need to re-use your exact initial query parameters.

- R5 (for detail record): To retrieve the full registration detail record of a candidate, you may run an R5 query. Take the Vehicle Surrogate ID ("VehicleRMVSurrogateID/ID") from the candidate whose full record you wish to retrieve. Use this as the input value for a R5 query. See the R5 query for additional information.

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Last Name	Registered Owner	2	30	String	Smith	
First Name	Registered Owner	1	30	String	John	
Middle Initial	Registered Owner	1	1	String	Alan	
Date of Birth	Registered Owner	10	10	Date {CCYY-MM-DD}	1950-10-18	

Registration Status	Registered Owner	4	4	String	ACTV	Values: The codes for this input are maintained by the RMV.
Person Surrogate ID	Registered Owner	8	8	String	A00FC00B	See the 'Follow-Up' section for additional info.
Person Database Key	Registered Owner	8	8	String	F1ACFF00	See the 'Follow-Up' section for additional info.

R9: RMV Section 5 Plate Query – Detail

Description: Use to search for Massachusetts license plate information, including registered dealer, repair, owner, and farm (section 5) plates by plate number.

Source: MA RMV **Transaction Type:** Request/Response

Input: Input Group(s):

- Plate: Plate Number (mandatory), Plate Type (optional), Plate Status (optional)

See the sample Request XML for additional information.

Output: Returns a set of potential candidates.

See the sample Response XML for additional information.

Follow-Up: None

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Plate Number	Plate	1	7	String	123456	
Plate Type	Plate	3	3	String	FAN	
Plate Status	Plate	4	4	String	ACTV	

R10: RMV Temporary Plate Query – Detail

Description: Used to search for Massachusetts temporary license plate information, including registered temporary dealer, repair, owner, and farm (section 5) plates by plate information.

Source: MA RMV **Transaction Type:** Request/Response

Input: Input Group(s):

- Plate: Plate Number (mandatory), Plate Type (optional), Plate Status (optional)

See the sample Request XML for additional information.

Output: Returns a list of potential candidates.

See the sample Response XML for additional information.

Follow-Up: None

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Plate Number	Plate	1	7	String	123456	
Plate Type	Plate	3	3	String	FAN	
Plate Status	Plate	4	4	String	ACTV	

SRR: RMV Suspension, Revocation, Re-Instatement Query

Description: Used to search for Massachusetts driver's licenses and vehicle registrations that have been suspended, revoked, and/or reinstated by date and location information.

Source: MA RMV **Transaction Type:** Request/Response

Input: Input Group(s):

- City: Activity Date (mandatory), City Name (mandatory)

See the sample Request XML for additional information.

Output: Returns a detailed record that contains the matching revocation and suspensions notifications for the time period and location specific.

See the sample Response XML for additional information.

Follow-Up: None

Notes:

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Activity Date	City	10	10	Date {CCYY-MM-DD}	2015-03-31	The date provided must be a Monday. The query will return matching information for the week leading up to and including the activity date specified.
City Name	City	1	20	String	Boston	

MMJ1: Medical Marijuana System - Candidate List

Description: Used to search records of individuals who are registered with the Medical Use of Marijuana Program. The system shall allow law enforcement users to validate registration cards and certification information in real-time for dispensary agents, registered patients and registered caregivers.

Source: MA DPH **Transaction Type:** Request/Response

Input: Input Group(s):

Person: Last Name (mandatory), First Name (mandatory), Date of Birth (mandatory), Mother's Maiden Name (mandatory), Registration Type (mandatory), Search Reason (optional)

See the sample Request XML for additional information.

Output: Returns a list of potential candidates.

See the sample Response XML for additional information.

Follow-Up: - MMJ2P - You may run a follow-up query to retrieve the detail record for a candidate in the candidate list.

- MMJ2C - You may run a follow-up query to retrieve the detail record for a candidate in the candidate list.

- MMJ2A -You may run a follow-up query to retrieve the detail record for a candidate in the candidate list.

Notes: - Registration Type Values: "CAREGIVER", "PATIENT", "RMD_AGENT"

- Search Reason Values: "CULTIVATION", "OUI", "POSSESSION"

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Last Name	Person	1	75	String	Doe	
First Name	Person	1	75	String	John	
Date of Birth	Person	10	10	Date {CCYY-MM-DD}	1950-10-18	
Mother's Maiden Name	Person	1	75	String	Smith	
Registration Type	Person	1	25	String	PATIENT	See 'Notes' for allowed values

Search Reason	Person	1	25	String	POSSESSION	See 'Notes' for allowed values

MMJ2A: Medical Marijuana System - Detail

Description: Used to search records of individuals who are registered with the Medical Use of Marijuana Program. The system shall allow law enforcement users to validate registration cards and certification information in real-time for dispensary agents, registered patients and registered caregivers.

Source: MA DPH **Transaction Type:** Request/Response

Input: Input Group(s):

Person: Agent Registration Number (mandatory), Last Name (mandatory), Search Reason (optional)

See the sample Request XML for additional information.

Output: Returns a detailed record for the Agent Registration Number specified.

See the sample Response XML for additional information.

Follow-Up: None

Notes: - Search Reason Values: "CULTIVATION", "OUI", "POSSESSION"

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
RMD Agent Registration Number	Person	6	6	String	A12345	Must start with "A"
Last Name	Person	1	75	String	Smith	
Search Reason	Person	1	25	String	POSSESSION	See 'Notes' for allowed values

MMJ2C: Medical Marijuana System - Detail

Description: Used to search records of individuals who are registered with the Medical Use of Marijuana Program. The system shall allow law enforcement users to validate registration cards and certification information in real-time for dispensary agents, registered patients and registered caregivers.

Source: MA DPH **Transaction Type:** Request/Response

Input: Input Group(s):

Person: Caregiver Registration Number (mandatory), Last Name (mandatory), Search Reason (optional)

See the sample Request XML for additional information.

Output: Returns a detailed record for the Caregiver Registration Number specified.

See the sample Response XML for additional information.

Follow-Up: None

Notes: - Search Reason Values: "CULTIVATION", "OUI", "POSSESSION"

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Caregiver Registration Number	Person	9	9	String	C12345678	Must start with "C"
Last Name	Person	1	75	String	Smith	
Search Reason	Person	1	25	String	POSSESSION	See 'Notes' for allowed values

MMJ2P: Medical Marijuana System - Detail

Description: Used to search records of individuals who are registered with the Medical Use of Marijuana Program. The system shall allow law enforcement users to validate registration cards and certification information in real-time for dispensary agents, registered patients and registered caregivers.

Source: MA DPH **Transaction Type:** Request/Response

Input: Input Group(s):

Person: Patient Registration Number (mandatory), Last Name (mandatory), Search Reason (optional)

See the sample Request XML for additional information.

Output: Returns a detailed record for the Patient Registration Number specified.

See the sample Response XML for additional information.

Follow-Up: None

Notes: - Search Reason Values: "CULTIVATION", "OUI", "POSSESSION"

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Patient Registration Number	Person	9	9	String	P12345678	Must start with "P"
Last Name	Person	1	75	String	Smith	
Search Reason	Person	1	25	String	POSSESSION	See 'Notes' for allowed values

QH: Initial III Identification History Query

Description: Used to search for the existence of an interstate criminal history record in the in the III Interstate Identification Index - this system is maintained by the Federal Bureau of Investigation.

Source: III **Transaction Type:** Request/Response

Input: Input Group(s):

Person (1): Name (mandatory), Sex (mandatory), Race (mandatory), Date of Birth (mandatory)

Person (2): Name (mandatory), Sex (mandatory), Race (mandatory), Date of Birth (mandatory), Social Security Number (mandatory)

Person (3): Name (mandatory), Sex (mandatory), Race (mandatory), Date of Birth (mandatory), Miscellaneous Number (mandatory)

Person (4): Name (mandatory), Social Security Number (mandatory)

Person (5): Name (mandatory), Miscellaneous Number (mandatory)

Person (6): SID Number (mandatory), Name (optional)

Person (7): FBI Number (mandatory), Name (optional)

All: Attention (optional)

See the sample Request XML for additional information.

Output: The complete response for a NCIC transaction is returned to the CJIS Broker by the native data source in one or more segments. Each segment will be returned as a separate transaction to the CJIS Web Service Endpoint. It is not possible to predict the segments for a given transaction in advance. The response times, formats and content will vary depending on the data source.

See the sample Response XML for additional information.

Follow-Up:

Notes: No Record Response: no record response does not mean that there is absolutely no criminal history record on the individual. The records indexed in the III include persons with an FBI record who were born in 1956 or later; persons born prior to 1956 whose first arrest fingerprint card was submitted to the FBI on July 1, 1974, or later; and numerous older records. Therefore, if an agency receives a no record response, the agency may send a fingerprint submission to the FBI for further searching. In addition, there may be records at the local or state level for which arrest fingerprint submissions are not on file with the FBI.

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
Name	Person	3	30	String	Smith, John Alan	
Sex	Person	1	1	String	M	
Race	Person	1	1	String	W	
Date Of Birth	Person	8	8	Numeric	19501018	
Social Security Number	Person	9	9	Numeric	123456789	
Miscellaneous Number	Person	4	15	String		
SID Number	Person	3	10	String	VA12345678	
FBI Number	Person	1	9	String	12345	
Attention	All	3	30	String	SGT SMITH	

QR: III Identification Record Query

Description: Used to search for the existence of an out of state criminal history record from the FBI Federal Bureau of Investigation and/or III Interstate Identification Index - this system is maintained by the Federal Bureau of Investigation and participating states.

Source: III **Transaction Type:** Request/Response

Input: Person (1): SID Number (mandatory)

Person (2): FBI Number (mandatory)

All: Attention (mandatory), Department or Agency Name (optional), Street Address or P.O. Box (optional), City and State (optional), Zip Code (optional), Building (optional)

See the sample Request XML for additional information.

Output: The complete response for a NCIC transaction is returned to the CJIS Broker by the native data source in one or more segments. Each segment will be returned as a separate transaction to the CJIS Web Service Endpoint. It is not possible to predict the segments for a given transaction in advance. The response times, formats and content will vary depending on the data source.

See the sample Response XML for additional information.

Follow-Up: QR Detailed Record (Follow-Up): A user can execute a QR to get a full criminal history record for a candidate. Take the SID or FBI number from the candidate whose complete criminal history record you wish to retrieve. Use this as the input value for a QR query. See the QR query for additional information.

Notes: Positive Response from Other States: When a record is available via the III, the III will send the requester an initial response providing a listing of the states/agencies responsible for providing the CHRI. The III will also notify each state/agency that maintains a portion of the subject's record to respond to the requester with the CHRI contained in its criminal history database. These records will be provided via the Nlets using the Nlets message key CR. When state-maintained records are not provided immediately, an acknowledgement will be sent via the Nlets advising when the record will be provided. Should a user receive a state record that requires clarification, the Nlets Help Files include a state contact that can answer questions regarding that state's record. The Nlets Help Files can be accessed by sending an administrative message to ORI/_ _SIRHELP using the state's code as the first two characters of the ORI.

Data Component	Input Group	Min Chars	Max Chars	Format	Example Value	Notes
SID	Person	3	10	String	VA12345678	
FBI Number	Person	1	9	String	93873

DQ/DR, DQG/DR, DNQ/DNR: Out of State Driver License Query

Description: Used to search for out of state driver's license information. The query is run through Nlets to a state or multi-state region by License Number or Name/Date of Birth/Sex or by Name Only.

Source: NLETS **Transaction Type:** Request/Response

Input: The specific elements (input groups) allowed and required to execute the transaction vary based on which message key is used: DQ, DQG, or DNQ.

For additional information see the Nlets Wiki at http://wiki.nlets.org/index.php/Section_13:_Driver_License_Transactions.

Output: The Message Key returned in an Nlets response is different than the one used in the request. A response Message Key of DR will be received for a request of DQ or DQG. A response Message Key of DNR will be received for a request of DNQ.

The complete response for a Nlets transaction is returned to the CJIS Broker by the native data source in one or more segments. Each segment will be returned as a separate transaction to the CJIS Web Service Endpoint. It is not possible to predict the segments for a given transaction in advance. The response times, formats and content will vary depending on the data source.

For additional information see the Nlets Wiki at http://wiki.nlets.org/index.php/Section_13:_Driver_License_Transactions#GJXDM.

Follow-Up:

Notes: This message key can also be used to obtain information from Mexico. For additional information see the Nlets Wiki at http://wiki.nlets.org/index.php/Section_33:_Communicating_with_Mexico.

IQ/IR, FQ/FR, AQ/AR, CR: Out of State Criminal History Record Information (CHRI) Q

Description: Used to search for out of state criminal history record information. The query is run through Nlets to a state or multi-state region by the person information and various identifiers. These Nlets queries are used to retrieve criminal history records that are not presently available on NCIC's Triple I system. They should never be used as a substitute for the Triple I system, but rather as a secondary inquiry after the user has: 1) Inquired on the Triple I system and received a no record; or 2) Received a record but feels that there may be additional data on the state file.

Source: NLETS **Transaction Type:** Request/Response

Input: The specific elements (input groups) allowed and required to execute the transaction vary based on which message key is used: IQ, FQ, AQ.

For additional information see the Nlets Wiki at http://wiki.nlets.org/index.php/Section_15:_Criminal_History_Record_Information_Transactions_(CHRI).

Output: The Message Key returned in an Nlets response is different than the one used in the request. A response Message Key of IR will be received for a request of IQ, FR received for a request of FQ and AR received for a request of AQ. The CR response Message Key will be received as a result of an NCIC III QR query.

The complete response for a Nlets transaction is returned to the CJIS Broker by the native data source in one or more segments. Each segment will be returned as a separate transaction to the CJIS Web Service Endpoint. It is not possible to predict the segments for a given transaction in advance. The response times, formats and content will vary depending on the data source.

For additional information see the Nlets Wiki at http://wiki.nlets.org/index.php/Section_15:_Criminal_History_Record_Information_Transactions_(CHRI)#GJXDM.

Follow-Up: FQ - Detailed Record (Follow-Up): To retrieve the full criminal history for a candidate you may run a FQ. Take the SID number from the candidate in the IR whose full record you wish to retrieve. Use this as the input value for a FQ query. See the FQ query for additional information.

Notes: Purpose Codes: Must be C, F, E, D, J or S
