3.5 Overview of other Town Owned Structures.....	13		

1. Introduction

The purpose of this report is to evaluate the bridge inventory of the Town of Rowley and provide a prioritized list of structures recommended for repair or replacement. This report also provides cost estimates for prioritized repairs one 1-year, 5-year, and 10-year time horizons to help plan for capital bridge improvements. These recommendations are based on the state of the bridge inventory as of December 2018 as observed in the field.

2. Background

The federal government created the National Bridge Inspection Standards (NBIS) in 1968 which established requirements for the inspection of all bridges including frequency, personnel qualifications, inspection reports, and inspection procedures. The NBIS apply to all structures defined as bridges.

2.1 Bridge definitions

The Federal Highway Administration (FHWA) defines a **bridge** as:

“A structure including supports erected over a depression or an obstruction, such as water, highway, or railway, and having a track or passageway for carrying traffic or other moving loads, and having an opening measured along the center of the roadway of more than 20 feet between undercopings of abutments or spring lines of arches, or extreme ends of openings for multiple boxes; it may include multiple pipes, where the clear distance between openings is less than half of the smaller contiguous opening.”

A **culvert** is defined as:

“A structure designed hydraulically to take advantage of submergence to increase hydraulic capacity. Culverts, as distinguished from bridges, are usually covered with embankment and are composed of structural material around the entire perimeter although some are supported on spread the streambed serving as the bottom of the culvert. Culverts may qualify to be considered “bridge” length.”

Structures meeting the above criteria are generally referred to as “NBI structures”. Any structures not meeting the above criteria are considered “non-NBI structures”. Non-NBI structures are outside the jurisdiction of the NBIS.

Massachusetts defines a bridge as any structure greater than 10 feet in length using the same measurement criteria as in NBIS. Structures greater than 10 feet in length but less than 20 feet in length have the designation as BRI as the bridge category code. Structures greater than 4 feet in length but less than 10 feet in length are considered culverts regardless of actual structure type. These structures are designated as CUL structures. BRI or CUL refers to the Bridge Category Code.

2.2 Inspection Requirements

According to the NBIS, bridges must be inspected every 24 months unless conditions warrant a more frequent inspection interval or written permission is obtained to extend the interval to a maximum of 48 months. Certain data must be collected during each inspection and reported to the Federal Government for bridges in the NBI.

Under Massachusetts General Laws (M.G.L.) Chapter 85 Section 35, MassDOT is required to determine the safe load carrying capacity of all municipally owned bridges. This cannot be determined without a bridge inspection and therefore MassDOT is responsible for the inspection

of all municipally owned NBI structures. Inspection findings are provided in the form of hard copy reports. MassDOT however, is not responsible for the regular inspection of non-NBI structures.

According to Section 8 of the MassDOT Bridge Inspection Handbook, MassDOT will inspect non-NBI structures as staffing levels permit. NBI structures and MassDOT owned structures are given priority over municipally owned structures.

Below is a link to the MassDOT Bridge Inspection Handbook for further information:

<http://www.massdot.state.ma.us/highway/DoingBusinessWithUs/ManualsPublicationsForms/BridgeInspectionHandbook.aspx>

2.3 Inspection Reports

The inspection reports contain a description of each structure and an evaluation of each component of the structure including deck, superstructure, substructure, approaches, stream channel, etc. Each component is given a numerical Condition Rating as well a description of any deficiencies. The deficiencies are categorized by severity and urgency of repair. The reports will also contain pictures and summaries of the deficiencies noted.

2.3.1 Condition Ratings

The condition of each bridge component is rated on a scale of 0-9 with 9 being the best rating and 0 being the poorest rating. In general, a rating of 7-9 indicates the component is in “good” condition, a rating of 5-6 indicates the component is in “fair” condition and a rating of 0-4 indicates the component is in “poor” condition. Refer to an inspection report for a more detailed description of each numerical rating.

2.3.2 Deficiency Definitions

Structure components exhibiting deficiencies are categorized first by the severity of the deficiency and second by the urgency of the repair required. The categories of deficiencies are “Minor”, “Severe/Major”, “Critical Structural”, and “Critical Hazard”. Refer to an inspection report for a more detailed description of each category. The urgency of repairs are defined by “Immediate”, “ASAP”, and “Prioritize”. The definitions of each are below and also on each inspection report:

Immediate (I) – Inspectors immediately contact District Bridge Engineer (for MassDOT) and receive further instruction.

ASAP (A) – Action should be initiated by Responsible Party (owner) upon receipt of the Inspection Report.

Prioritize (P) – Shall be prioritized by Responsible Party (owner) and repairs scheduled when funds/manpower is available.

2.3.3 Inspection Types

2.3.3.1 Routine Inspections

Routine inspections are used to determine the general condition of a structure. They are “hands-on” inspections, meaning each component is inspected up close.

2.3.3.2 Underwater Inspections

Underwater inspections are performed on substructures units in water. Depending on water depth, a dive team may be required to assess the condition of the substructure. These inspections should be performed every 36 to 60 months.

2.3.3.3 Fracture Critical Inspections

Fracture Critical Inspections are performed on structures containing fracture critical members. Fracture Critical Members are defined as steel members in tension or with a tension element, whose failure would be expected to cause a portion or the entire structure to collapse. These inspections are performed at the same time as the routine inspections following procedures specific to each bridge. The procedures are kept on file for each bridge by MassDOT.

2.3.3.4 Special Member Inspections

Special member inspections are performed when a major bridge component (deck, superstructure, substructure) has an overall rating of 4 or lower. If the overall rating is a 4, the inspection frequency of the entire structure is reduced to 12 months. If the overall rating is 3, the inspection frequency is reduced to 6 months.

2.3.3.5 Freeze/Thaw Inspections

According to the MassDOT Bridge Inspection Manual, freeze/thaw inspections are performed yearly to evaluate exposed concrete elements and ensure deteriorated concrete does not fall onto a travelled way.

3. Town of Rowley Bridge Inventory

3.1 List of Town Owned Bridges

Below are tables listing all Town owned bridges in order by structure identification number (Table 1) and overall worst to best condition (Table 2).

Table 1: By Structure Number

Town ID No.	MassDOT Bridge No.	Feature Carried	Feature Intersected	Structure Material	Structure Type	Hydraulic Opening	Overall Condition
1		Bennett Hill Rd.	N/A	Stone	Single Culvert	24" dia.	6
2		Boxford Rd.	N/A	Pipe (Metal)	Single Culvert	30" dia.	6

3.2 Functionally Obsolete/Structurally Deficient Bridges

The FHWA tracks bridges considered Functionally Obsolete or Structurally Deficient.

3.2.1 Definitions

Functionally Obsolete – This term describes a structure that is not suitable for its current use. There are a number of reasons a bridge may be functionally obsolete including shoulder width, lane width, barrier type, approach geometry, etc.

Structurally Deficient – This term describes a bridge with a rating of a major component (deck, superstructure, substructure) of a 4 or below. Bridge owners typically make repairs to structurally deficient bridges as soon as possible so they can be removed from the list.

3.3 Overview of Town Owned NBI Bridges (*Span length > 20 ft.*)

All NBI bridges owned by the Town are inspected on a regular basis by MassDOT with condition ratings reported to the federal government. The evaluations below are based on information contained in the latest available MassDOT Inspection Report.

R-11-005 Dodge Road over Mill River

BRIDGE TYPE	Arch-deck with concrete
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Concrete Parapet
DOWNSTREAM	Concrete Parapet
OVERALL CONDITION	7
NOTES	See MassDOT Inspection Report

R-11-008 Wethersfield Street over Mill River

BRIDGE TYPE	Concrete frame
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Concrete Parapet
DOWNSTREAM	Concrete Parapet
OVERALL CONDITION	8
NOTES	See MassDOT Inspection Report

R-11-009

Wethersfield Street over Batchelder Brook

BRIDGE TYPE Concrete frame

WEARING SURFACE Asphalt

RAILING TYPE

UPSTREAM Metal Bridge Railing

DOWNSTREAM Metal Bridge Railing

OVERALL CONDITION 7

NOTES See MassDOT Inspection Report

3.4 Overview of Town Owned non-NBI Bridges (Span length between 10 ft. and 20 ft.)

All non-NBI bridges owned by the Town should be inspected on a regular basis by MassDOT. Because the condition of these structures is not required to be reported to the federal government, these structures are inspected if MassDOT resources are available. The evaluations below are based on information contained in the latest available MassDOT Inspection Report.

R-11-002 Glen Street over Mill River

BRIDGE TYPE Arch-deck with concrete

WEARING SURFACE Asphalt

RAILING TYPE

UPSTREAM Concrete Parapet

DOWNSTREAM Concrete Parapet

OVERALL CONDITION 4

NOTES See MassDOT Inspection Report

R-11-007 Glen Street Extension over Mill River

BRIDGE TYPE Masonry Arch

WEARING SURFACE Asphalt

RAILING TYPE

UPSTREAM None

DOWNSTREAM None

OVERALL CONDITION 7

NOTES See MassDOT Inspection Report.
Bridge is currently privately owned.

R-11-006
Mill Road over Mill River

BRIDGE TYPE	Steel Girder
WEARING SURFACE	Asphalt
RAILING TYPE	Concrete parapet with chain link fence
OVERALL CONDITION	4
UPSTREAM	None
DOWNSTREAM	None
NOTES	See MassDOT Inspection Report

3.5 Overview of other Town Owned Structures

Structures with span lengths less than 10 ft. are considered culverts and are not inspected by MassDOT. VHB visited each structure and the evaluations below are based on field assessments of each structure. Approximate street address shown in ()

1. Bennett Hill Road (22)

BRIDGE TYPE	Single culvert–Stone
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Wood
DOWNSTREAM	None
OVERALL CONDITION	6
NOTES:	Difficult access due to vegetation
IMMEDIATE NEEDS	Remove vegetation from channel

2. Boxford Road (38)

BRIDGE TYPE	Single culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	6
NOTES:	Clean culvert of sediment, and channel of debris and vegetation.
IMMEDIATE NEEDS	Culvert is almost full of sediment, dry laid stone headwalls satisfactory

3. Boxford Road (238)

BRIDGE TYPE	Single culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	6
NOTES:	SDS headwall has 5" +/- tree growing on top. Both stone headwalls have loose or settled stones.
IMMEDIATE NEEDS	Clean debris from channel; remove tree at downstream headwall; rebuild both headwalls.

4. Boxford Road (326)

BRIDGE TYPE	Single culvert with poly pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	6
NOTES:	Plastic pipe is generally in a good condition, but damaged in upstream end. No headwalls. Loose stone laid on downstream end.
IMMEDIATE NEEDS	Clear vegetation and debris; monitor undermining at pipe ends.

5. Bradford Street (53)

BRIDGE TYPE	Single culvert with clay pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Wood
DOWNSTREAM	None
OVERALL CONDITION	6
NOTES:	Un-grouted masonry headwall and channel outlet. Inlet headwall is failing (un-grouted stone). Pipe is half filled with sediment. Pavement is in poor condition.
IMMEDIATE NEEDS	

6. Central Street (23)

BRIDGE TYPE	Single Culvert with granite slabs/30" CMP at outlet
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Guardrail
DOWNSTREAM	Wood
OVERALL CONDITION	6
NOTES:	Rusting and section loss at inlet. Partial collapsing of outlet headwall (missing stones). Flooding issues due to heavy rain.
IMMEDIATE NEEDS	

7. Central Street (151)

BRIDGE TYPE	Single culvert with concrete pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	Wood
OVERALL CONDITION	5
NOTES:	Headwall at outlet is leaning. Inlet at pond on private property.
IMMEDIATE NEEDS	Grout stones at outlet headwall. Remove debris.

8. Central Street (293)

BRIDGE TYPE	Single culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	6
NOTES:	Corrosion and section loss for first 5' of pipe. Headwalls are concrete.
IMMEDIATE NEEDS	

9. Christopher Road (47)

BRIDGE TYPE	Single culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	7
NOTES:	Vertical crack appears in downstream headwall. Inlet is on private property.
IMMEDIATE NEEDS	

10. Cross Street (12)

BRIDGE TYPE	Slab with concrete/granite
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Wire
DOWNSTREAM	Wood
OVERALL CONDITION	7
NOTES:	Masonry abutment with granite slab. Last 5' at downstream end is concrete abutments and slab.
IMMEDIATE NEEDS	

11. Cross Street (84)

BRIDGE TYPE	Single culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	6
NOTES:	Some crushing of pipe appears at outlet (could have been at construction). Grouted masonry appears at inlet; dry stacked masonry appears at outlet.
IMMEDIATE NEEDS	

12. Daniels Road (25)

BRIDGE TYPE	Single culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	Wood
OVERALL CONDITION	5
NOTES:	Bank erosion appears at downstream. Downstream headwall and wingwall appear to have collapsed.
IMMEDIATE NEEDS	Rebuild downstream headwall and wingwall.

13. Dodge Road (22)

BRIDGE TYPE	Single culvert with clay pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	3
NOTES:	Appears headwall, wingwalls, and pipe have collapsed at outlet. Depression occurs in road above pipe.
IMMEDIATE NEEDS	Replace

14. Dodge Road (77)

BRIDGE TYPE	Single culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	7
NOTES:	Riprap slope at inlet, perched outlet. Minor erosion of outlet bank.
IMMEDIATE NEEDS	

15. Dodge Road (149)

BRIDGE TYPE	Double culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	5
NOTES:	Gaps in stones at inlet and outlet. Perched outlet, bottom of pipe with 100% section loss for approx. 3' (water does not flow out end of pipe)
IMMEDIATE NEEDS	

18. Haverhill Street (43)

BRIDGE TYPE	Single culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Metal guardrail
DOWNSTREAM	Metal guardrail
OVERALL CONDITION	5
NOTES:	Downstream end of pipe is rusted with minor section loss. Wingwalls are spalled and cracked. Upstream pipe is not visible. Headwall condition is poor with spalling and sink hole behind.
IMMEDIATE NEEDS	Rebuild upstream headwall

19. Haverhill Street (62)

BRIDGE TYPE	Single culvert with HDPE pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Metal guardrail
DOWNSTREAM	None
OVERALL CONDITION	6
NOTES:	Pipe is in a good condition. Downstream stone headwall is in a good condition. Concrete upstream headwall has some spalling.
IMMEDIATE NEEDS	Clean debris at portals.

20. Haverhill Street (89)

BRIDGE TYPE	Single culvert with metal pipe (downstream) and plastic pipe (upstream)
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Metal guardrail
DOWNSTREAM	None
OVERALL CONDITION	5
NOTES:	Upstream headwall in fair condition with some spalling. Roadway drains directly over headwall. Downstream headwall has minor spalling.
IMMEDIATE NEEDS	Repair upstream headwall

21. Haverhill Street (223)

BRIDGE TYPE	Single culvert with concrete
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Metal guardrail
DOWNSTREAM	None
OVERALL CONDITION	4
NOTES:	Upstream headwall is in a good condition. Downstream headwall has failed.
IMMEDIATE NEEDS	Rebuild downstream headwall.

22. Haverhill Street (112)

BRIDGE TYPE	Single culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	
NOTES:	Upstream (N) is very heavily vegetated. Access is limited to obtain info on the culvert. Channel appears to drop upon entering upstream. Could not find downstream portal.
IMMEDIATE NEEDS	Clear vegetation up stream for better access. Scope upstream portal.

23. Haverhill Street over Batchelder Brook (312)

BRIDGE TYPE	Single culvert with HDPE pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Metal guardrail
DOWNSTREAM	Metal guardrail
OVERALL CONDITION	
NOTES:	Culvert completely submerged.
IMMEDIATE NEEDS	Re-inspect during lower flow period.

24. Haverhill Street (713)

BRIDGE TYPE	Single culvert with concrete
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Metal guardrail
DOWNSTREAM	Metal guardrail
OVERALL CONDITION	5
NOTES:	Upstream pipe submerged in water, not visible. Mortared stone headwall is in a good condition. Downstream pipe is 90% full. Stone headwall has failed.
IMMEDIATE NEEDS	Repair downstream headwall.

25. Haverhill Street over Mill River (851)

BRIDGE TYPE	TBD
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Metal guardrail
DOWNSTREAM	Metal guardrail
OVERALL CONDITION	
NOTES:	Due to high water and heavy debris, culvert was not visible at either end.
IMMEDIATE NEEDS	Revisit culvert during period of low flow to better identify.

26. Hillside Street (60)

BRIDGE TYPE	Single culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	7
NOTES:	Concrete headwall and wingwalls at inlet. Masonry at outlet. Floods frequently.
IMMEDIATE NEEDS	

27. Hillside Street (170)

BRIDGE TYPE	Single culvert with pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	4
NOTES:	Inlet and outlet headwalls have completely collapsed.
IMMEDIATE NEEDS	Rebuild headwalls.

28. Independent Street over Ox Pasture Brook (40)

BRIDGE TYPE	Opened bottom arch
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Guardrail
DOWNSTREAM	Guardrail
OVERALL CONDITION	4
NOTES:	Erosion appears behind headwall and wing at inlet and outlet. Partial collapse of upstream wingwalls. Un-grouted masonry. Fills up during heavy rain but no overtopping.
IMMEDIATE NEEDS	Reconstruct headwall and wingwall; remove debris.

29. Newbury Road (164)

BRIDGE TYPE	Single culvert with concrete pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	7
NOTES:	Inlet is steel grate and drop inlet. Outlet to riprap apron and field. Asphalt on top is rutted and patched.
IMMEDIATE NEEDS	

30. Newbury Road (204)

BRIDGE TYPE	Single culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	7
NOTES:	Un-grouted masonry headwall and wingwalls at inlet and outlet. (drying during field visit)
IMMEDIATE NEEDS	

31. Newbury Road (259)

BRIDGE TYPE	Single culvert with metal pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	5
NOTES:	Inlet headwall is missing. Outlet headwall is not visible. Riprap slopes around outlet.
IMMEDIATE NEEDS	Uncover inlet and outlet.

32. Pleasant Street (49)

BRIDGE TYPE	Single culvert
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Wood
DOWNSTREAM	None
OVERALL CONDITION	5
NOTES:	Headwall at outlet has collapsed. Inlet is partially blocked with sediment.
IMMEDIATE NEEDS	Repair headwall and remove sediment.

33. Prospect Street (35)

BRIDGE TYPE	Single culvert with concrete pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Low stone parapet
DOWNSTREAM	Low stone parapet
OVERALL CONDITION	8
NOTES:	Grouted masonry headwall and wings.
IMMEDIATE NEEDS	

34. School Street (36)

BRIDGE TYPE	Single culvert with masonry/ concrete
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Wood
DOWNSTREAM	Wood
OVERALL CONDITION	6
NOTES:	Headwall at inlet is leaning outwards. Some need of repointing. Cracks in asphalt.
IMMEDIATE NEEDS	Repair sidewalk, downstream side.

35. Summer Street (67)

BRIDGE TYPE	Single culvert with concrete/clay pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	Wood
OVERALL CONDITION	7
NOTES:	Minor erosion appears behind inlet wingwall. Additional 15" dia. Conc. Pipe at outlet from nearby drop inlet.
IMMEDIATE NEEDS	

36. Turcotte Memorial Drive (8)

BRIDGE TYPE	Double culvert with concrete pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Wood guardrail
DOWNSTREAM	Wood guardrail
OVERALL CONDITION	8
NOTES:	North pipe is blocked with debris.
IMMEDIATE NEEDS	

37. West Ox Pasture Ln. (45)

BRIDGE TYPE	Single culvert with poly pipe
WEARING SURFACE	Compacted Stone
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	8
NOTES:	Recently installed structure. Riprap slopes.
IMMEDIATE NEEDS	

38. Wethersfield Street (256)

BRIDGE TYPE	Single culvert with concrete pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Wood guardrail
DOWNSTREAM	Wood guardrail
OVERALL CONDITION	5
NOTES:	No pointing at outlet. Dislodged stones at inlet headwall, no pointing.
IMMEDIATE NEEDS	Remove trees behind headwall; rebuild inlet headwall.

41. Wethersfield Street

Culvert is being replaced in 2018.

42. Wilkes Road (29)

BRIDGE TYPE	Double culvert with concrete pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Conc. Parapet with metal rail
DOWNSTREAM	Conc. Parapet with metal rail
OVERALL CONDITION	8
NOTES:	Pipes at base of back-to-back retaining walls are supporting road.
IMMEDIATE NEEDS	

43. Spencer Knowles Road (28)

BRIDGE TYPE	Single culvert with concrete pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Conc. Parapet with metal rail
DOWNSTREAM	Conc. Parapet with metal rail
OVERALL CONDITION	8
NOTES:	Minor cracks appear in parapet.
IMMEDIATE NEEDS	

44. Wethersfield Street

BRIDGE TYPE	Single culvert with poly pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	6
NOTES:	Drains wetlands area. Dip in road over pipe. Un-grouted stones for headwall.
IMMEDIATE NEEDS	

45. Haverhill Street (414)

BRIDGE TYPE	Single culvert
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	Metal guardrail
OVERALL CONDITION	6
NOTES:	Downstream (N) portal is submerged in water; headwall fair; upstream portal appears to be CB.
IMMEDIATE NEEDS	Clean DS channel.

46. Haverhill Street (908)

BRIDGE TYPE	Single culvert with concrete pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Metal guardrail
DOWNSTREAM	Metal guardrail
OVERALL CONDITION	6
NOTES:	Upstream (N) portal is submerged in water; headwall fair; downstream pipe is about 1/2 full of heavy debris.
IMMEDIATE NEEDS	Clean debris from pipe and DS channel.

47. Boxford Road (139)

BRIDGE TYPE	Single culvert with concrete pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	5
NOTES:	DS Stone headwall has large tree and roots growing over it.
IMMEDIATE NEEDS	Remove tree at DS headwall and re-set stones. Clean channel of debris.

48. Boxford Road (151)

BRIDGE TYPE	Single culvert with poly pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	None
OVERALL CONDITION	6
NOTES:	Pipe is in a good condition, no headwall downstream.; upstream headwall meets satisfactory.
IMMEDIATE NEEDS	Clear vegetation and debris. Pipe is in a good condition, no headwall downstream.; upstream headwall meets satisfactory.

49. Wilkes Road (5)

BRIDGE TYPE	Single culvert with concrete pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	None
DOWNSTREAM	Wood
OVERALL CONDITION	6
NOTES:	Debris appears at inlet and no headwall. Stone headwall at outlet. (Dry during field visit)
IMMEDIATE NEEDS	Remove debris from inlet.

50. Cindy Lane (5)

BRIDGE TYPE	Triple culvert with concrete pipe
WEARING SURFACE	Asphalt
RAILING TYPE	
UPSTREAM	Wood guardrail
DOWNSTREAM	Wood guardrail
OVERALL CONDITION	7
NOTES:	Vegetation growing between pipes and on slopes.
IMMEDIATE NEEDS	Remove vegetation growing between pipes.

4. Recommendations for Prioritized Repairs

The recommended repairs have been prioritized and categorized into 1-year, 5-year, and 10-year time horizons. In addition, deficiencies that do not affect the structural integrity of the structure yet still should be repaired are prioritized but fall into the category of completed as able.

4.1 Repairs to be Completed Within a Year

It is recommended that the structure running beneath Dodge Road be replaced as soon as possible. The road exhibits a large depression over the structure which has been filled/patched multiple times. The depression indicates that the structure has at least partially collapsed. It is recommended that the structure be replaced with a HDPE or concrete pipe of a diameter that matches the hydraulic capacity of the existing structure. It is also recommended that MassDOT standard headwalls are installed at each end of the pipe. Please refer to the attached excerpts from the Construction Standards in Appendix C.

Priority	Town ID No	MassDOT Bridge No.	Feature Carried	Feature Intersected	Recommended Repair	Conceptual Cost Estimate
1	13		Dodge Rd.	N/A	Replace structure	\$34,400

4.2 Repairs to be Scheduled Within 5 Years

The structures listed below are in poor condition and should be considered for repair/replacement. Both structures are greater than 10' in length but less than 20' and therefore qualify for funding under MassDOT's current Small Bridge Program. This program reimburses municipalities up to \$500,000 per year to repair/replace small bridges. Municipalities must submit an application demonstrating the need for the funds with application deadlines twice a year on April 1 and October 1. The program is slated to last 5 years and began in October 2016. These bridges were put into the 5-year time horizon category to take advantage of this funding source.

Bridge R-11-002:

This structure is a concrete arch and was given the following condition ratings from the most recent MassDOT inspection – Superstructure: 4, Substructure: 4, meaning the entire structure is in poor condition. In addition to the condition of the structure itself, undermining of one of the abutments was noted. This means soil has been washed away from beneath the bridge footing. The concrete appears to be crumbling and in poor condition. Major cracks with efflorescence was observed meaning water is flowing through the concrete.

Bridge R-11-006:

This structure consists railroad tracks embedded in a concrete slab on masonry abutments and was given the following condition ratings from the most recent MassDOT inspection – Deck: 5, Superstructure: 4, Substructure: 6, meaning the superstructure is in poor condition. This structure is located on a dead-end unpaved road therefore failure of this structure completely cuts off property access for some residents. It is anticipated that the existing substructures could be rehabilitated, and the superstructure should be replaced.

Priority	Town ID No	MassDOT Bridge No.	Feature Carried	Feature Intersected	Recommended Repair	Conceptual Cost Estimate
1	17	R11002	Glen St.	Mill River	Replace with a precast concrete span	\$796,000
2	52	R11006	Mill Rd.	Mill River	Replace with a precast concrete span	\$488,000

4.3 Repairs to be Scheduled Within 10 Years

It is recommended that the structure listed below be replaced. The wingwalls are failing and there are signs of bank erosion behind the wingwalls. This will eventually lead to erosion of the roadway. Some stones have been dislodged from the dry stacked masonry abutments. The superstructure which appears to consist of granite slabs exhibits cracks. The structure is especially important since it is located near the entrance to the DPW yard and sees heavy truck traffic.

The recommendation to replace this structure in the next 10 years is based on the assumption that funding for the project would need to come from the town's funds (i.e. no state funding) and it will take some time to plan for and save the funds required for the replacement project.

Priority	Town ID No	MassDOT Bridge No.	Feature Carried	Feature Intersected	Recommended Repair	Conceptual Cost Estimate
1	28		Independent St.	Ox Pasture Brook	Replace with a precast concrete span	\$400,000

4.4 Repairs to be Scheduled as Funds/Labor Available

It is recommended that the following list of repairs be completed as funding/town labor forces are available. These deficiencies do not affect the structural integrity of the structure but can impact the performance of the pipe or culvert. In some cases, the roadway which crosses the structure can be subject to erosion where failing headwalls are located close to the edge of the roadway. The repairs are prioritized according to the condition rating given to each.

Repair/Rebuild Headwalls:

It is recommended that where applicable, the headwalls are repaired/replaced in accordance with MassDOT standard construction details shown Appendix C. These could be completed by town forces or by a contractor.

Clear Vegetation/Debris:

Vegetation/debris near the structure inlets and outlets should be removed as recommended below. Vegetation/debris in the stream bed can limit flow and lead to potential flooding issues. When removing debris (such as rocks, logs, and other) care should be taken to not disturb or alter the natural stream bed. Trees growing near the inlets and outlets should be removed. The tree roots can damage the structure headwalls over time. This work can be completed with town forces.

Priority	Town ID No	MassDOT Bridge No.	Feature Carried	Approximate Street Address	Recommended Repair	Conceptual Cost Estimate
1	21		Haverhill St.	223 Haverhill St.	Rebuild downstream headwall	\$7,300
1	27		Hillside St.	170 Hillside St.	Rebuild headwalls	\$18,800
2	7		Central St.	151 Central St.	Grout stones at outlet headwall. Remove debris	\$2,900
2	12		Daniels Rd.	25 Daniels Rd.	Rebuild downstream headwall and wingwall	\$14,200
2	18		Haverhill St.	43 Haverhill St.	Rebuild upstream headwall	\$7,300
2	20		Haverhill St.	89 Haverhill St.	Rebuild upstream headwall	\$7,300
2	24		Haverhill St.	713 Haverhill St.	Rebuild upstream headwall	\$9,400
2	31		Newbury Rd.	259 Newbury Rd.	Uncover inlet and outlet	\$1,200
2	32		Pleasant St.	49 Pleasant St.	Repair headwall, remove sediment	\$12,300
2	38		Wethers-field St.	256 Wethers-field St.	Remove trees behind headwall, rebuild inlet headwall	\$9,000

Priority	Town ID No	MassDOT Bridge No.	Feature Carried	Approximate Street Address	Recommended Repair	Conceptual Cost Estimate
2	47		Boxford Rd.	139 Boxford Rd.	Remove tree at downstream headwall and re-set stones. Clean channel of debris	\$10,400
3	1		Bennett Hill Rd.	22 Bennett Hill Rd.	Remove vegetation from channel	\$1,700
3	2		Boxford Rd.	38 Boxford Rd.	Clean culvert of sediment, and channel of debris and vegetation.	\$4,400
3	3		Boxford Rd.	238 Boxford Rd.	Clean debris from channel, remove tree at downstream headwall, rebuild both headwalls.	\$22,800
3	4		Boxford Rd.	326 Boxford Rd.	Clear vegetation and debris	\$4,400
3	19		Haverhill St.	62 Haverhill St.	Clean debris	\$2,900
3	34		School St.	36 School St.	Repair sidewalk, downstream side	\$5,800
3	45		Haverhill St.	414 Haverhill St.	Clean debris from downstream channel	\$2,900
3	46		Haverhill St.	908 Haverhill St.	Clean debris from pipe and downstream channel	\$2,900
3	48		Boxford Rd.	151 Boxford Rd.	Clear vegetation and debris	\$4,400
3	49		Wilkes Rd.	5 Wilkes Rd.	Remove debris from inlet	\$2,900
3	50		Cindy Ln.	5 Cindy Lane	Remove vegetation growing between pipes	\$2,900

CONDITION RATING GUIDE (For Items 58, 59, 60 and 61)

CODE	CONDITION	DEFECTS
N	NOT APPLICABLE	
G 9	EXCELLENT	Excellent condition.
G 8	VERY GOOD	No problem noted.
G 7	GOOD	Some minor problems.
F 6	SATISFACTORY	Structural elements show some minor deterioration.
F 5	FAIR	All primary structural elements are sound but may have minor section loss, cracking, spalling or scour.
P 4	POOR	Advanced section loss, deterioration, spalling or scour.
P 3	SERIOUS	Loss of section, deterioration, spalling or scour have seriously affected primary structural components. Local failures are possible. Fatigue cracks in steel or shear cracks in concrete may be present.
C 2	CRITICAL	Advanced deterioration of primary structural elements. Fatigue cracks in steel or shear cracks in concrete may be present or scour may have removed substructure support. Unless closely monitored it may be necessary to close the bridge until corrective action is taken.
C 1	"IMMINENT" FAILURE	Major deterioration or section loss present in critical structural components or obvious vertical or horizontal movement affecting structure stability. Bridge is closed to traffic but corrective action may put it back in light service.
0	FAILED	Out of service - beyond corrective action.

DEFICIENCY REPORTING GUIDE

DEFICIENCY: A defect in a structure that requires corrective action.

CATEGORIES OF DEFICIENCIES:

M= Minor Deficiency - Deficiencies which are minor in nature, generally do not impact the structural integrity of the bridge and could easily be repaired. Examples include but are not limited to: Spalled concrete, Minor pot holes, Minor corrosion of steel, Minor scouring, Clogged drainage, etc.

S= Severe/Major Deficiency - Deficiencies which are more extensive in nature and need more planning and effort to repair. Examples include but are not limited to: Moderate to major deterioration in concrete, Exposed and corroded rebars, Considerable settlement, Considerable scouring or undermining, Moderate to extensive corrosion to structural steel with measurable loss of section, etc.

C-S= Critical Structural Deficiency - A deficiency in a structural element of a bridge that poses an extreme unsafe condition due to the failure or imminent failure of the element which will affect the structural integrity of the bridge.

C-H= Critical Hazard Deficiency - A deficiency in a component or element of a bridge that poses an extreme hazard or unsafe condition to the public, but does not impair the structural integrity of the bridge. Examples include but are not limited to: Loose concrete hanging down over traffic or pedestrians, A hole in a sidewalk that may cause injuries to pedestrians, Missing section of bridge railing, etc.

URGENCY OF REPAIR:

I = Immediate- [Inspector(s) immediately contact District Bridge Inspection Engineer (DBIE) to report the Deficiency and to receive further instruction from him/her].

A = ASAP- [Action/Repair should be initiated by District Maintenance Engineer or the Responsible Party (if not a State owned bridge) upon receipt of the Inspection Report].

P = Prioritize- [Shall be prioritized by District Maintenance Engineer or the Responsible Party (if not a State owned bridge) and repairs made when funds and/or manpower is available].

CITY/TOWN ROWLEY	B.I.N. 8BK	BR. DEPT. NO. R-11-002	8.-STRUCTURE NO. R11002-8BK-MUN-BRI	INSPECTION DATE JUN 20, 2016
----------------------------	----------------------	----------------------------------	---	--

REMARKS

The approaches are North and South. The elevations are West and East. The Mill River flows from West to East.

GENERAL REMARKS

The structure is a concrete arch deck bridge. (See sketches #1, #2 & #3) There is a 18" outside diameter utility line in the arch ring underside at spring line which is obstructing channel vertical clearance. Both the North approach and South approach have weight posting restriction signs for 2.5 tons at closest intersections. There are no weight posting signs at the structure.

ITEM 58 - DECK

Item 58.1 - Wearing surface

The bituminous wearing surface of the bridge has random areas of transverse cracking. The Southeast edge of pavement has small patched areas and tire wear. (See photo #1)

Item 58.7 - Parapets

The East and West concrete parapets have up to 40% loss of paint coating. The Northwest top section of the parapet is spalled up to 11'-1" long x 12" deep x 3" high with no exposed rebar. (See photos #2 & #3)

Item 58.12 - Utilities

There is a 18" utility pipe in the arch ring that spans between spring lines approximately 62" from South fascia. The pipe ends are grouted into the arch ring in areas up to 40" wide x 35" high. Both grouted patches have widespread deterioration with spalls and delaminated areas. There is a crack in both grout patches that propagates continuously through the arch ring. (See photos #4 & #5)

APPROACHES

Approaches a - Appr. pavement condition

The North approach pavement has areas of map cracking. (See Photo #6)

ITEM 59 - SUPERSTRUCTURE

Item 59.1 - Arch/Arch Ring

The arch/arch ring has widespread map cracking with evidence of leakage and efflorescence. The arch ring underside approximately 62" from South fascia has a crack up to +/- 1/4" that starts at the spring line utility pipe grouted patch and continues across the arch ring to the other spring line utility pipe grouted patch. There are cracks up to +/- 1/4" that have propagated off of the main spring line to spring line crack. The arch ring areas near the utility pipe grouted areas have spalled/delaminated up to 20" high x 4" deep. (See photos #7- #8, #12 & #13)

The utility pipe has steel cable supports embedded in the arch ring crown and the concrete around the supports are spalled. (See photo #9)

Item 59.5 - Spandrel Walls

The South spandrel wall near West parapet base has a large spalled area that extends into the Southwest wingwall. Both the East and West spandrel walls have random cracks with efflorescence. (See photo #10)

CITY/TOWN ROWLEY	B.I.N. 8BK	BR. DEPT. NO. R-11-002	8.-STRUCTURE NO. R11002-8BK-MUN-BRI	INSPECTION DATE JUN 20, 2016
----------------------------	----------------------	----------------------------------	---	--

REMARKS

The spring line between South breastwall and arch ring has signs of active leakage. The South spring line near East fascia has a spalled area up to 3' long x 4" wide x 1" deep with efflorescence. (See photo #11)

The South spring line near West fascia is spalled up to 65" long x 21" high x 1" deep. (See photo #15)

The North spring line near West fascia is cracked up to 51" long x 1/4" thick. (See photo #12)

Both the North and South spring lines generally have cracking with efflorescence and active leakage at the joint. (See photo #12)

ITEM 60 - SUBSTRUCTURE

Item 60.1 - Abutments

Item 60.1.d - Breastwalls

Approximately up to 10' from the West fascia both the North and South breastwalls have widespread map cracking with light to moderate efflorescence and signs of active leakage and delamination. (See photos #13 & #14)

The South breastwall near West fascia has a spall up to 65" long x 21" high x 1" deep with no exposed rebar that extends around the fascia into the Southwest wingwall. (See photo #15)

The South breastwall approximately 7'-4" from West fascia has a crack at the utility pipe patch area that extends down the full height (68") of the breastwall that is up to 1/4" wide and propagates down into the coating. (See photo #13)

Both the North and South breastwall construction joints have hair line cracks with evidence of active leakage and efflorescence. Additionally, both breastwalls have moderate abrasion up to 3' above top of coating.

Item 60.1.e - Wingwalls

The Northeast and Southeast wingwalls have cracks at construction joints with moderate efflorescence. See photos #24 & #25)

The Southwest wingwall has a spall up to 44" long x 81" high x 9" deep with no exposed rebar. (See photo #16)

The Northwest wingwall end has a cracked/broken section with spalled concrete at ground level. (See photo #17)

Item 60.1.f - Slope Paving/Rip-Rap

The Northeast, Southeast and Northwest embankments have minimal rip-rap protection.

The Southwest embankment has bituminous slope pavement due to failed embankment. The pavement is cracked/spalled of at the waterline. (See photo #18)

Item 60.1.h - Footings

Both the North and South footings have areas of exposure that extends up to +/- 26" below the bottom of coating and +/- 33" horizontally undermining the footing due to channel scour. (See chart #1)

CITY/TOWN ROWLEY	B.I.N. 8BK	BR. DEPT. NO. R-11-002	8.-STRUCTURE NO. R11002-8BK-MUN-BRI	INSPECTION DATE JUN 20, 2016
----------------------------	----------------------	----------------------------------	---	--

REMARKS

Both the North and South footings have areas of exposure that extend up to +/- 26" below the bottom of the footing and up to +/- 33" horizontal undermining of the footing due to channel scour. Measurements taken along both the North and South footing for scour are provided in attached table. (See chart #1)

SubStructure Undermining Notes

Large areas of undermining were found below the North abutment footing. Starting at West fascia for up to +/- 26' (See chart #1 for measurements).

SubStructure Scour Notes

See Item 60.1.j.

ITEM 61 - CHANNEL AND CHANNEL PROTECTION

Item 61.2 - Embankment Erosion

The Southwest embankment in front of Southwest wingwall is paved with bituminous concrete and the bottom of the embankment at water level is undermining the pavement. (See photo #16)

The Southeast embankment in front of the Southeast wingwall has a tree with its roots fully exposed and very minimal vegetation. (See photo #24)

TRAFFIC SAFETY

Item 36a - Bridge Railing

Both the East and West parapets act as the bridge rail. The Northwest top of parapet is spalled up to 11'-1" wide x 12" deep x 3" high. (See photo #3)

Item 36b - Transitions

Both Northeast and Northwest transitions do not connect to parapet they are terminated before the parapet with steel posts. (See Photos #19 & #20).

The Southeast and Southwest transition rails are two steel wire cables on concrete posts that are fastened to the bridge rail. (See photo #21)

Item 36c - Approach Guardrail

The Southwest approach guardrail run has (3) damaged concrete posts with areas up to 100% section loss of rebar. The posts are bent/broken with lateral displacement up to 2'. (See photos #22)

Item 36d - Approach Guardrail Ends

Both the Southeast and Southwest approach guardrail ends are two steel wire cables buried in the ground. See photo #23)

The Northwest approach guardrail end at access road terminates without a proper end condition. (See photo #19)

CONDITION RATING GUIDE			(For Items 58, 59, 60 and 61)
CODE	CONDITION	DEFECTS	
N	NOT APPLICABLE		
G 9	EXCELLENT	Excellent condition.	
G 8	VERY GOOD	No problem noted.	
G 7	GOOD	Some minor problems.	
F 6	SATISFACTORY	Structural elements show some minor deterioration.	
F 5	FAIR	All primary structural elements are sound but may have minor section loss, cracking, spalling or scour.	
P 4	POOR	Advanced section loss, deterioration, spalling or scour.	
P 3	SERIOUS	Loss of section, deterioration, spalling or scour have seriously affected primary structural components. Local failures are possible. Fatigue cracks in steel or shear cracks in concrete may be present.	
C 2	CRITICAL	Advanced deterioration of primary structural elements. Fatigue cracks in steel or shear cracks in concrete may be present or scour may have removed substructure support. Unless closely monitored it may be necessary to close the bridge until corrective action is taken.	
C 1	"IMMINENT" FAILURE	Major deterioration or section loss present in critical structural components or obvious vertical or horizontal movement affecting structure stability. Bridge is closed to traffic but corrective action may put it back in light service.	
0	FAILED	Out of service - beyond corrective action.	

DEFICIENCY REPORTING GUIDE	
DEFICIENCY:	A defect in a structure that requires corrective action.
CATEGORIES OF DEFICIENCIES:	
M= Minor Deficiency	Deficiencies which are minor in nature, generally do not impact the structural integrity of the bridge and could easily be repaired. Examples include but are not limited to: Spalled concrete, Minor pot holes, Minor corrosion of steel, Minor scouring, Clogged drainage, etc.
S= Severe/Major Deficiency	Deficiencies which are more extensive in nature and need more planning and effort to repair. Examples include but are not limited to: Moderate to major deterioration in concrete, Exposed and corroded rebars, Considerable settlement, Considerable scouring or undermining, Moderate to extensive corrosion to structural steel with measurable loss of section, etc.
C-S= Critical Structural Deficiency	A deficiency in a structural element of a bridge that poses an extreme unsafe condition due to the failure or imminent failure of the element which will affect the structural integrity of the bridge.
C-H= Critical Hazard Deficiency	A deficiency in a component or element of a bridge that poses an extreme hazard or unsafe condition to the public, but does not impair the structural integrity of the bridge. Examples include but are not limited to: Loose concrete hanging down over traffic or pedestrians, A hole in a sidewalk that may cause injuries to pedestrians, Missing section of bridge railing, etc.
URGENCY OF REPAIR:	
I = Immediate-	[Inspector(s) immediately contact District Bridge Inspection Engineer (DBIE) to report the Deficiency and to receive further instruction from him/her].
A = ASAP-	[Action/Repair should be initiated by District Maintenance Engineer or the Responsible Party (if not a State owned bridge) upon receipt of the Inspection Report].
P = Prioritize-	[Shall be prioritized by District Maintenance Engineer or the Responsible Party (if not a State owned bridge) and repairs made when funds and/or manpower is available].

CITY/TOWN ROWLEY	B.I.N. B7X	BR. DEPT. NO. R-11-005	8.-STRUCTURE NO. R11005-B7X-MUN-NBI	INSPECTION DATE SEP 13, 2017
----------------------------	----------------------	----------------------------------	---	--

REMARKS

According to design plans:

Approaches and abutments are East and West.

Elevations are South and North.

Two spans precast concrete reinforced archs, numbered from West to East.

Each arch has four sections numbering from South to North.

Mill River flows South to North.

ITEM 59 - SUPERSTRUCTURE

Item 59.1 - Arch/Arch Ring

There is hairline cracking in all 4 sections of Spans 1 and 2 at the crown area. **(Photo 1)**

There is hairline cracking on the north face of Section 4 and south face of Section 1 in both spans at the crown. **(Photo 2)**

Span 1, Section 3: spall measuring: 8" Diameter x 1" deep located at the eastern half of arch, 4' from the crown area. **(Photo 3)**

Item 59.14 - Member Alignment

Section 3 in Span 1 is misaligned 3/4" lower than Section 4 at midspan. **(Photo 4)**

ITEM 60 - SUBSTRUCTURE

Item 60.1 - Abutments

Item 60.1.d - Breastwalls

A few sporadic vertical hairline cracks were present in east and west breastwalls.

Item 60.2 - Piers or Bents

Item 60.2.d - Stems/Webs/Pierwalls

A few sporadic minor cracks were present on the east and west face of the pierwall.

ITEM 61 - CHANNEL AND CHANNEL PROTECTION

Item 61.4 - Vegetation

Vegetation growing at upstream end affecting flow.

Item 61.7 - Aggradation

Minor aggradation in Span 1 restricting flow.

TRAFFIC SAFETY

Item 36a - Bridge Railing

Both sides - Type " T101 Modified Bridge Rail with type "ss" guardrail.

Item 36b - Transitions

Continuation of type "ss" guardrail.

CITY/TOWN ROWLEY	B.I.N. B7X	BR. DEPT. NO. R-11-005	8.-STRUCTURE NO. R11005-B7X-MUN-NBI	INSPECTION DATE SEP 13, 2017
----------------------------	----------------------	----------------------------------	---	--

REMARKS

Item 36d - Approach Guardrail
Continuation of type "ss" guardrail.

Southwest approach guardrail- Minor scrapes and dents **(Photo 5)**.

Northeast approach guardrail shows minor scrapes and dents near buried end treatment. **(Photo 6)**

Several spacer blocks are loose and misaligned. **(Photo 7)**

Item 36d - Approach Guardrail Ends

Northwest, southwest and southeast, have boxing glove ends.

Southwest end treatment has minor damage. **(Photo 8)**

The northeast has a buried end with minor scrapes and dents. **(Photo 6)**.

Photo Log

- Photo 1 : Cracking at Span 1 Section 4 intrados. (Typical throughout both spans)
- Photo 2 : Cracking at north face of Span 1 Section 4 (typical)
- Photo 3 : Spall at Span 1 Section 3: 8" Diameter x 1" deep.
- Photo 4 : Span 1, Section 3/Section 4 interface: Section 3 is 3/4" lower than Section 4 at crown.
- Photo 5 : Southwest approach guardrail minor scrapes and dents.
- Photo 6 : Northeast guardrail has minor scrapes and dents near buried end treatment.
- Photo 7 : Northwest guardrail end with loose misaligned spacer block.
- Photo 8 : Southwest boxing glove end treatment has minor damage.

CONDITION RATING GUIDE

(For Items 58, 59, 60 and 61)

	CODE	CONDITION	DEFECTS
	N	NOT APPLICABLE	
G	9	EXCELLENT	Excellent condition.
G	8	VERY GOOD	No problem noted.
G	7	GOOD	Some minor problems.
F	6	SATISFACTORY	Structural elements show some minor deterioration.
F	5	FAIR	All primary structural elements are sound but may have minor section loss, cracking, spalling or scour.
P	4	POOR	Advanced section loss, deterioration, spalling or scour.
P	3	SERIOUS	Loss of section, deterioration, spalling or scour have seriously affected primary structural components. Local failures are possible. Fatigue cracks in steel or shear cracks in concrete may be present.
C	2	CRITICAL	Advanced deterioration of primary structural elements. Fatigue cracks in steel or shear cracks in concrete may be present or scour may have removed substructure support. Unless closely monitored it may be necessary to close the bridge until corrective action is taken.
C	1	"IMMINENT" FAILURE	Major deterioration or section loss present in critical structural components or obvious vertical or horizontal movement affecting structure stability. Bridge is closed to traffic but corrective action may put it back in light service.
	0	FAILED	Out of service - beyond corrective action.

DEFICIENCY REPORTING GUIDE

DEFICIENCY: A defect in a structure that requires corrective action.

CATEGORIES OF DEFICIENCIES:
M= Minor Deficiency - Deficiencies which are minor in nature, generally do not impact the structural integrity of the bridge and could easily be repaired. Examples include but are not limited to: Spalled concrete, Minor pot holes, Minor corrosion of steel, Minor scouring, Clogged drainage, etc.
S= Severe/Major Deficiency - Deficiencies which are more extensive in nature and need more planning and effort to repair. Examples include but are not limited to: Moderate to major deterioration in concrete, Exposed and corroded rebars, Considerable settlement, Considerable scouring or undermining, Moderate to extensive corrosion to structural steel with measurable loss of section, etc.
C-S= Critical Structural Deficiency - A deficiency in a structural element of a bridge that poses an extreme unsafe condition due to the failure or imminent failure of the element which will affect the structural integrity of the bridge.
C-H= Critical Hazard Deficiency - A deficiency in a component or element of a bridge that poses an extreme hazard or unsafe condition to the public, but does not impair the structural integrity of the bridge. Examples include but are not limited to: Loose concrete hanging down over traffic or pedestrians, A hole in a sidewalk that may cause injuries to pedestrians, Missing section of bridge railing, etc.

URGENCY OF REPAIR:
I = Immediate- [Inspector(s) immediately contact District Bridge Inspection Engineer (DBIE) to report the Deficiency and to receive further instruction from him/her].
A = ASAP- [Action/Repair should be initiated by District Maintenance Engineer or the Responsible Party (if not a State owned bridge) upon receipt of the Inspection Report].
P = Prioritize- [Shall be prioritized by District Maintenance Engineer or the Responsible Party (if not a State owned bridge) and repairs made when funds and/or manpower is available].

CITY/TOWN ROWLEY	B.I.N. 8BL	BR. DEPT. NO. R-11-006	8.-STRUCTURE NO. R11006-8BL-MUN-BRI	INSPECTION DATE JUN 9, 2016
----------------------------	----------------------	----------------------------------	---	---------------------------------------

REMARKS

The steel rail stringers are numbered from West fascia to East fascia. The rail at the West fascia is labeled R-1 and are numbered across the width of the bridge to the East fascia which is labeled R-20. (See sketches #1 & #3) The approaches are North and South. The elevations are East and West. The Mill River flows from West to East.

GENERAL REMARKS

The structure is a single span stringer bridge with closely spaced 4" to 5" steel rails functioning as the support beams. (See sketches #1 & #3, and chart #1) The steel rails clear spacing varies 6"+/-1/2" with bricks located between the rails that rest on the top of the bottom flange. The top portion of the steel rails are concrete incased with what appears to be an unreinforced concrete deck. (See sketch #2 & #4) The superstructure sets on unreinforced concrete bridge seats that was poured on top of masonry stone abutments. (See sketch #5)

ITEM 58 - DECK

Item 58.1 - Wearing surface

The bituminous wearing surface on the bridge has tire wear with minimal crown. (See photo #1)

Item 58.2 - Deck Condition

The deck is an unreinforced 12" slab that partially encases the top 1/3 of steel rails. The East fascia is heavily spalled for up to the full length x full height x 3" depth. (See photo #2) The outside face of steel rail R-20 is exposed near midspan and backfill at the cold joint between the bridge rail concrete base and the fascia is seeping out. (See photo #3)

The deck underside at the East end between R-19 and R-20 near midspan is spalled up to 15" long x 8" wide x 4" deep with signs of active leakage through the deck onto R-19. (See photo #4)

The deck underside between rails is supported by bricks and there are random areas of missing/deteriorate/damaged bricks.

The West fascia cold joint between fascia and bridge rail concrete base is cracked with some random areas of efflorescence and minor rust staining. The West fascia has a spall up to 2" wide x 7" high x 2.75" deep. See photo #5)

Item 58.8 - Railing

See Item 36.a

APPROACHES

Approaches a - Appr. pavement condition

The bituminous wearing surface at the South approach has tire wear with minimal crown. (See photo #7)

Approaches b - Appr. Roadway Settlement

The North approach is gravel starting approximately 30' beyond the bridge, and has potholes and tire settlement at the joint between the bridge pavement and the approach gravel. (See photo #6)

The South approach is paved and has a depression in the Southeast side of road approximately 10 feet from bridge. (See photo #7)

CITY/TOWN ROWLEY	B.I.N. 8BL	BR. DEPT. NO. R-11-006	8.-STRUCTURE NO. R11006-8BL-MUN-BRI	INSPECTION DATE JUN 9, 2016
----------------------------	----------------------	----------------------------------	---	---------------------------------------

REMARKS
<p><u>Item 59.4 - Girders or Beams</u></p> <p>The rails are numbered from the West fascia R-1 to the East fascia R-20. (See sketches #1 & #3) The rail sizes vary from 4" wide to 5" wide. (See chart #1)</p> <p>The rail ends at the North and South abutments typically have heavy deterioration to the bottom flanges up to +/-50% loss of section.</p> <p>There are bricks that span between the rails preventing access to the top of the bottom rail, webs and top flange. Visual assessment was used to determine section loss due to inability to accurately measure the losses to the section.</p> <p>Rail R-1 at the bottom flange has heavy rust across the full span with up to 25% loss of bottom flange section. (See photo #8)</p> <p>Rail R-2 at the bottom flange has heavy deterioration across the full span with up to 50% loss of bottom flange section. (See photo #9)</p> <p>Rail R-3 at the bottom flange has surface rust across the full span with up to 10% loss of bottom flange section.</p> <p>Rail R-4 at the bottom flange has surface rust across the full span with up to 10% loss of bottom flange section.</p> <p>Rail R-5 at the bottom flange has surface rust across the full span with up to 20% loss of bottom flange section. (See photo #10)</p> <p>Rail R-6 at the bottom flange has surface rust across the full span with up to 20% loss of bottom flange section. Near the North abutment the bottom flange has a notch up to 12" long x 1.5" wide x full flange depth. (See photo #11)</p> <p>Rail R-7 at the bottom flange has surface rust across the full span with up to 20% loss of bottom flange section.</p> <p>Rail R-8 at the bottom flange has surface rust across the full span with up to 10% loss of bottom flange section.</p> <p>Rail R-9 at the bottom flange has surface rust across the full span with up to 20% loss of bottom flange section. Near the South abutment the rail is spliced with a splice plate. (See photo #12)</p> <p>Rails R-10 at the bottom flange has heavy deterioration across the full span with up to 50% loss of bottom flange section. Near the midspan there is loss of section to bottom flange up to 8" long x 1.75" wide x full flange depth. (See photos #13-14)</p> <p>R-11 at the bottom flange has heavy deterioration across the full span with up to 50% loss of bottom flange section. (See photo #15)</p> <p>R-12 at the bottom flange has heavy deterioration across the full span with up to 35% loss of bottom flange</p>

CITY/TOWN ROWLEY	B.I.N. 8BL	BR. DEPT. NO. R-11-006	8.-STRUCTURE NO. R11006-8BL-MUN-BRI	INSPECTION DATE JUN 9, 2016
----------------------------	----------------------	----------------------------------	---	---------------------------------------

REMARKS

Rail R-13 at the bottom flange has surface rust across the full span with up to 10% loss of bottom flange section. Near the South abutment the rail is spliced with a splice plate.

Rail R-14 at the bottom flange has surface rust across the full span with up to 20% loss of bottom flange section.

Rail R-15 at the bottom flange has surface rust across the full span with up to 20% loss of bottom flange section.

Rail R-16 at the bottom flange has heavy rust across the full span with up to 25% loss of bottom flange section. (See photo #18)

Rails R-17, R-18, R-19, and R-20 at the bottom flange has heavy rust across the full span with up to 50% loss of bottom flange section. (See photo #19-22)

Item 59.13 - Member Alignment

The abutments are slightly skewed and the span narrows from the West end (upstream) to the East end (downstream).

ITEM 60 - SUBSTRUCTURE

Item 60.1 - Abutments

Item 60.1.b - Bridge Seats

The North and South bridge seats appear to be unreinforced concrete that are 8" high x 18" deep.

Bridge seats are generally hidden from view, but there are several full height cracks in the front face of the concrete cap below the bridge seat that clearly extend into the bridge seat. These cracks are defined below.

The South bridge seat has a crack under R-15 that starts at the bridge seat and extends down the concrete cap of the breastwall up to 7/16" wide x full height x full depth. (See photo #23) There is also a crack under R-19 that is up to 1/4" wide x full height x full depth. (See photo #24)

The North bridge seat has a crack under R-8 that starts at the bridge seat and extends down the concrete cap of the breastwall up to 1/2" wide x full height x full depth. (See photo #25) There is also a crack under R-3 that is up to 1/2" wide x full height x full depth. (See photo #26)

Item 60.1.d - Breastwalls

The South breastwall has a crack under R-15 that starts at the bridge seat and extends down the concrete cap of the breastwall up to 7/16" wide x full height x full depth. (See photo #23) There is also a crack under R-19 that is up to 1/4" wide x full height x full depth. (See photo #24) The South abutment below rail R-15 the crack in the breastwall has propagated down into the masonry stone abutment and has cracked up to 6" from bottom of the concrete cap with one stone cracked full depth. (See photo #23)

The North breastwall has a crack under R-8 that starts at the bridge seat and extends down the concrete cap of the breastwall up to 1/2" wide x full height x full depth. (See photo #25) There is also a crack under R-3 that is up to 1/2" wide x full height x full depth. (See photo #26)

CITY/TOWN ROWLEY	B.I.N. 8BL	BR. DEPT. NO. R-11-006	8.-STRUCTURE NO. R11006-8BL-MUN-BRI	INSPECTION DATE JUN 9, 2016
----------------------------	----------------------	----------------------------------	---	---------------------------------------

REMARKS

The Northeast and Southwest wingwalls are dry laid stones and appear to have some stones that have been dislodged and fallen into the stream. (See photo #27)

The Northwest and Southwest wingwalls are masonry and appear to be in fair condition.

ITEM 61 - CHANNEL AND CHANNEL PROTECTION

Item 61.2 - Embankment Erosion

The embankments at the wingwall ends generally have minor erosion.

Item 61.4 - Vegetation

The embankments have heavy vegetation growth.

Item 61.6 - Rip-Rap/Slope Protection

There is minimal riprap protection at the ends of the wingwalls.

TRAFFIC SAFETY

Item 36a - Bridge Railing

The bridge railing system is 6"x6" concrete posts with a 2"x12" timber rail spanning the posts.

The Southeast bridge rail post concrete base has broken off and is overhanging the Southeast fascia. (See photos #28 & #29)

The North bridge rail spans completely over the bridge without any posts on the bridge (approximately +/- 3'-8" between posts). With push of the hand, rail easily deflects a foot or more. Rail has almost no capacity to redirect an errant vehicle. (See photo #30)

SKETCHES

WIDESPREAD HEAVY DETERIORATION WAS OBSERVED AT THE BOTTOM OF RAIL. THE BRICKS BETWEEN RAILS PREVENTED ACCESS TO THE TOP OF THE BOTTOM FLANGE, WEBS AND TOP OF RAILS. LOSSES TO THE BOTTOM FLANGE WAS NOT FIELD MEASURED, BUT WAS BASED ON A VISUAL ASSESSMENT DUE TO THE INABILITY TO ACCURATELY MEASURE THE LOSSES.

*MEASUREMENTS WERE TAKEN IN THE FIELD ON 06/09/2016

CONDITION RATING GUIDE

(For Items 58, 59, 60 and 61)

CODE	CONDITION	DEFECTS
N	NOT APPLICABLE	
G 9	EXCELLENT	Excellent condition.
G 8	VERY GOOD	No problem noted.
G 7	GOOD	Some minor problems.
F 6	SATISFACTORY	Structural elements show some minor deterioration.
F 5	FAIR	All primary structural elements are sound but may have minor section loss, cracking, spalling or scour.
P 4	POOR	Advanced section loss, deterioration, spalling or scour.
P 3	SERIOUS	Loss of section, deterioration, spalling or scour have seriously affected primary structural components. Local failures are possible. Fatigue cracks in steel or shear cracks in concrete may be present.
C 2	CRITICAL	Advanced deterioration of primary structural elements. Fatigue cracks in steel or shear cracks in concrete may be present or scour may have removed substructure support. Unless closely monitored it may be necessary to close the bridge until corrective action is taken.
C 1	"IMMINENT" FAILURE	Major deterioration or section loss present in critical structural components or obvious vertical or horizontal movement affecting structure stability. Bridge is closed to traffic but corrective action may put it back in light service.
0	FAILED	Out of service - beyond corrective action.

DEFICIENCY REPORTING GUIDE

DEFICIENCY: A defect in a structure that requires corrective action.

CATEGORIES OF DEFICIENCIES:

M= Minor Deficiency - Deficiencies which are minor in nature, generally do not impact the structural integrity of the bridge and could easily be repaired. Examples include but are not limited to: Spalled concrete, Minor pot holes, Minor corrosion of steel, Minor scouring, Clogged drainage, etc.

S= Severe/Major Deficiency - Deficiencies which are more extensive in nature and need more planning and effort to repair. Examples include but are not limited to: Moderate to major deterioration in concrete, Exposed and corroded rebars, Considerable settlement, Considerable scouring or undermining, Moderate to extensive corrosion to structural steel with measurable loss of section, etc.

C-S= Critical Structural Deficiency - A deficiency in a structural element of a bridge that poses an extreme unsafe condition due to the failure or imminent failure of the element which will affect the structural integrity of the bridge.

C-H= Critical Hazard Deficiency - A deficiency in a component or element of a bridge that poses an extreme hazard or unsafe condition to the public, but does not impair the structural integrity of the bridge. Examples include but are not limited to: Loose concrete hanging down over traffic or pedestrians, A hole in a sidewalk that may cause injuries to pedestrians, Missing section of bridge railing, etc.

URGENCY OF REPAIR:

I = Immediate- [Inspector(s) immediately contact District Bridge Inspection Engineer (DBIE) to report the Deficiency and to receive further instruction from him/her].

A = ASAP- [Action/Repair should be initiated by District Maintenance Engineer or the Responsible Party (if not a State owned bridge) upon receipt of the Inspection Report].

P = Prioritize- [Shall be prioritized by District Maintenance Engineer or the Responsible Party (if not a State owned bridge) and repairs made when funds and/or manpower is available].

CITY/TOWN ROWLEY	B.I.N. 8BM	BR. DEPT. NO. R-11-007	8.-STRUCTURE NO. R11007-8BM-MUN-BRI	INSPECTION DATE JUN 20, 2016
----------------------------	----------------------	----------------------------------	---	--

REMARKS

The approaches are East and West. The elevations are North and South. The Mill River flows from South to North.

GENERAL REMARKS

The structure is a dry laid masonry arch bridge. It is no longer used for public access to Route 1. The East approach has guardrail blocking traffic from accessing the drive off of Route 1. The West approach is a drive that extends off Glen Street and terminates at end of East approach.

ITEM 58 - DECK

Item 58.8 - Railing

See Item 36a.

ITEM 59 - SUPERSTRUCTURE

Item 59.1 - Arch/Arch Ring

The arch ring underside has random areas of efflorescence leaking through stone voids. Arch stones are generally in good condition. (See Photos #1).

Both the East and West arch ring have a few small filler stones that have slightly shifted. (See Photos #2-3)

ITEM 60 - SUBSTRUCTURE

Item 60.1 - Abutments

Item 60.1.d - Breastwalls

The breastwall is composed of large, dry laid masonry blocks that support the arch ring. The stones in the breastwall are generally in good condition.

Item 60.1.e - Wingwalls

Wingwalls are dry laid masonry stone and are generally in good condition. (See photo #4)

TRAFFIC SAFETY

Item 36a - Bridge Railing

There is evidence of one original bridge rail post in the Southwest roadway. Currently masonry brick posts have been set on a +/- 2" concrete spandrel wall cap. There are +/- 1" steel posts with steel chain link railing spanning across the bridge. The railing does not meet current design standards and provides minimal protection for an errant vehicle. (See photos #5-6)

Both the North and South concrete leveling pads have areas with broken/deteriorated sections. (See photos #7-8)

The brick masonry posts base have areas with deterioration and broken/missing bricks.

Item 36b - Transitions

All approaches do not have any transition guardrail connecting to the bridge rail.

Item 36c - Approach Guardrail

CONDITION RATING GUIDE (For Items 58, 59, 60 and 61)

CODE	CONDITION	DEFECTS
N	NOT APPLICABLE	
G 9	EXCELLENT	Excellent condition.
G 8	VERY GOOD	No problem noted.
G 7	GOOD	Some minor problems.
F 6	SATISFACTORY	Structural elements show some minor deterioration.
F 5	FAIR	All primary structural elements are sound but may have minor section loss, cracking, spalling or scour.
P 4	POOR	Advanced section loss, deterioration, spalling or scour.
P 3	SERIOUS	Loss of section, deterioration, spalling or scour have seriously affected primary structural components. Local failures are possible. Fatigue cracks in steel or shear cracks in concrete may be present.
C 2	CRITICAL	Advanced deterioration of primary structural elements. Fatigue cracks in steel or shear cracks in concrete may be present or scour may have removed substructure support. Unless closely monitored it may be necessary to close the bridge until corrective action is taken.
C 1	"IMMINENT" FAILURE	Major deterioration or section loss present in critical structural components or obvious vertical or horizontal movement affecting structure stability. Bridge is closed to traffic but corrective action may put it back in light service.
0	FAILED	Out of service - beyond corrective action.

DEFICIENCY REPORTING GUIDE

DEFICIENCY: A defect in a structure that requires corrective action.

CATEGORIES OF DEFICIENCIES:
M= Minor Deficiency - Deficiencies which are minor in nature, generally do not impact the structural integrity of the bridge and could easily be repaired. Examples include but are not limited to: Spalled concrete, Minor pot holes, Minor corrosion of steel, Minor scouring, Clogged drainage, etc.
S= Severe/Major Deficiency - Deficiencies which are more extensive in nature and need more planning and effort to repair. Examples include but are not limited to: Moderate to major deterioration in concrete, Exposed and corroded rebars, Considerable settlement, Considerable scouring or undermining, Moderate to extensive corrosion to structural steel with measurable loss of section, etc.
C-S= Critical Structural Deficiency - A deficiency in a structural element of a bridge that poses an extreme unsafe condition due to the failure or imminent failure of the element which will affect the structural integrity of the bridge.
C-H= Critical Hazard Deficiency - A deficiency in a component or element of a bridge that poses an extreme hazard or unsafe condition to the public, but does not impair the structural integrity of the bridge. Examples include but are not limited to: Loose concrete hanging down over traffic or pedestrians, A hole in a sidewalk that may cause injuries to pedestrians, Missing section of bridge railing, etc.

URGENCY OF REPAIR:
I = Immediate- [Inspector(s) immediately contact District Bridge Inspection Engineer (DBIE) to report the Deficiency and to receive further instruction from him/her].
A = ASAP- [Action/Repair should be initiated by District Maintenance Engineer or the Responsible Party (if not a State owned bridge) upon receipt of the Inspection Report].
P = Prioritize- [Shall be prioritized by District Maintenance Engineer or the Responsible Party (if not a State owned bridge) and repairs made when funds and/or manpower is available].

CITY/TOWN ROWLEY	B.I.N. B7Y	BR. DEPT. NO. R-11-008	8.-STRUCTURE NO. R11008-B7Y-MUN-NBI	INSPECTION DATE SEP 13, 2017
----------------------------	----------------------	----------------------------------	---	--

REMARKS

According to the design plans:
 Approaches and abutments are West and East.
 Elevations are North and South.
 This is a simple span precast concrete reinforced rigid frame.
 Mill River flows from South to North.

ITEM 58 - DECK

Item 58.1 - Wearing surface

Minor transverse cracking at both east and west ends of the deck.

Minor longitudinal cracking in the eastbound roadway.

APPROACHES

Approaches a - Appr. pavement condition

Minor intermittent transverse and longitudinal cracking throughout east approach.

ITEM 61 - CHANNEL AND CHANNEL PROTECTION

Item 61.4 - Vegetation

Heavy vegetation growing at upstream end partially restricting flow.

TRAFFIC SAFETY

Item 36a - Bridge Railing

Both sides of structure have Type "T101" Modified Bridge Rails.

Item 36b - Transitions

Continuation of type "ss" guardrail.

Item 36c - Approach Guardrail

All four corners have Type "ss" Highway Guard Rail. Some spacer blocks are loose and misaligned. (Photo 1)

Item 36d - Approach Guardrail Ends

Northwest and southeast have boxing glove ends with minor scrapes.

Northwest endpost is rotated toward roadway. (Photo 2)

The southwest and northeast have buried ends with minor scrapes and dents.

Photo Log

Photo 1 : Loose and misaligned guardrail spacer block.

Photo 2 : Northwest guardrail end post rotated towards roadway.

CONDITION RATING GUIDE (For Items 58, 59, 60 and 61)

CODE	CONDITION	DEFECTS
N	NOT APPLICABLE	
G 9	EXCELLENT	Excellent condition.
G 8	VERY GOOD	No problem noted.
G 7	GOOD	Some minor problems.
F 6	SATISFACTORY	Structural elements show some minor deterioration.
F 5	FAIR	All primary structural elements are sound but may have minor section loss, cracking, spalling or scour.
P 4	POOR	Advanced section loss, deterioration, spalling or scour.
P 3	SERIOUS	Loss of section, deterioration, spalling or scour have seriously affected primary structural components. Local failures are possible. Fatigue cracks in steel or shear cracks in concrete may be present.
C 2	CRITICAL	Advanced deterioration of primary structural elements. Fatigue cracks in steel or shear cracks in concrete may be present or scour may have removed substructure support. Unless closely monitored it may be necessary to close the bridge until corrective action is taken.
C 1	"IMMINENT" FAILURE	Major deterioration or section loss present in critical structural components or obvious vertical or horizontal movement affecting structure stability. Bridge is closed to traffic but corrective action may put it back in light service.
0	FAILED	Out of service - beyond corrective action.

DEFICIENCY REPORTING GUIDE

DEFICIENCY: A defect in a structure that requires corrective action.

CATEGORIES OF DEFICIENCIES:
M= Minor Deficiency - Deficiencies which are minor in nature, generally do not impact the structural integrity of the bridge and could easily be repaired. Examples include but are not limited to: Spalled concrete, Minor pot holes, Minor corrosion of steel, Minor scouring, Clogged drainage, etc.
S= Severe/Major Deficiency - Deficiencies which are more extensive in nature and need more planning and effort to repair. Examples include but are not limited to: Moderate to major deterioration in concrete, Exposed and corroded rebars, Considerable settlement, Considerable scouring or undermining, Moderate to extensive corrosion to structural steel with measurable loss of section, etc.
C-S= Critical Structural Deficiency - A deficiency in a structural element of a bridge that poses an extreme unsafe condition due to the failure or imminent failure of the element which will affect the structural integrity of the bridge.
C-H= Critical Hazard Deficiency - A deficiency in a component or element of a bridge that poses an extreme hazard or unsafe condition to the public, but does not impair the structural integrity of the bridge. Examples include but are not limited to: Loose concrete hanging down over traffic or pedestrians, A hole in a sidewalk that may cause injuries to pedestrians, Missing section of bridge railing, etc.

URGENCY OF REPAIR:
I = Immediate- [Inspector(s) immediately contact District Bridge Inspection Engineer (DBIE) to report the Deficiency and to receive further instruction from him/her].
A = ASAP- [Action/Repair should be initiated by District Maintenance Engineer or the Responsible Party (if not a State owned bridge) upon receipt of the Inspection Report].
P = Prioritize- [Shall be prioritized by District Maintenance Engineer or the Responsible Party (if not a State owned bridge) and repairs made when funds and/or manpower is available].

CITY/TOWN ROWLEY	B.I.N. B80	BR. DEPT. NO. R-11-009	8.-STRUCTURE NO. R11009-B80-MUN-NBI	INSPECTION DATE SEP 11, 2017
----------------------------	----------------------	----------------------------------	---	--

REMARKS

This is a simple span precast concrete reinforced rigid frame superstructure.
 The approaches are West and East.
 The elevations are South and North.
 Bachelder Brook flows South to North.
 For the purpose of this report, rigid frame sections are labeled from South to North.

TEM 58 - DECK

tem 58.4 - Curbs

South curb has minor scrapes throughout. (**Photo 1**)

TEM 59 - SUPERSTRUCTURE

tem 59.4 - Concrete Rigid Frame

The concrete structure is in good condition.

The west wall of the rigid frame has loose joint filler between Sections 2 and 3. (**Photo 2**)

The east wall of the rigid frame has loose joint filler at the interface of Sections 1 and 2, Sections 2 and 3, and Sections 3 and 4. (**Photo 3**)

The frame roof has a number of minor spalls throughout. (**Photo 4**)

The north face of rigid frame Section 4 has minor hairline cracks at midspan. (**Photo 5**)

tem 59.13 - Member Alignment

The interface between rigid frame Sections 2 and 3 shows minor misalignment at the east end. (**Photo 6**)

TRAFFIC SAFETY

tem 36a - Bridge Railing

Both sides of bridge have Type T101, modified bridge railings. (**Photo 7**)

tem 36b - Transitions

Continuation of Type "ss" guardrail with wood posts spaced properly.

tem 36c - Approach Guardrail

All four corners have type "ss" guardrail.

tem 36d - Approach Guardrail Ends

Northeast and southwest ends are buried.

Southeast and northwest have boxing glove ends.

Photo Log

Photo 1 : South curb has minor scrapes throughout
 Photo 2 : West wall has loose joint filler between rigid frame sections 2 and 3.
 Photo 3 : East wall has loose joint filler between rigid frame sections 1 and 2, 2 and 3, and 3 and 4.

Bridge Summary

<u>Town ID No.</u>	<u>MassDOT Bridge No.</u>	<u>Feature Carried</u>	<u>Feature Intersected</u>	<u>Structure Material</u>	<u>Structure Type</u>	<u>Hydraulic Opening</u>	<u>Cover Depth</u>	<u>Wearing Surface</u>	<u>Railing</u>	<u>Year Built</u>	<u>Flooding Issue</u>	<u>Scour Issues/ Undermining</u>	<u>Channel Condition Upstream/Downstream</u>		<u>Overall Condition</u>	<u>Immediate Repairs Required</u>	<u>Notes</u>
1		Bennett Hill Rd.	N/A	Stone	Single Culvert	24" dia.	3 ft	Asphalt	US - wood DS - none	N/A	NO	None	7		6	Remove vegetation from channel	Difficult access due to vegetation
2		Boxford Rd.	N/A	Pipe (Metal)	Single Culvert	30" dia.	3 ft	Asphalt	None	N/A	NO	None Visible	6	Upstream - very heavy vegetation and debris	6	Culvert is almost full with sediment, dry laid stone headwalls satisfactory	Clean culvert of sediment, and channel of debris and vegetation.
3		Boxford Rd.	N/A	Pipe (Metal)	Single Culvert	30" dia.	2.5 ft	Asphalt	None	N/A	YES	None Visible	6	Downstream, moderate debris, inlc. Large trees	6	Clean debris from channel, remove tree at DS headwall, rebuild both headwalls.	SDS headwall has 5" +/- tree growing on top. Both stone headwalls have loose or settled stones
4		Boxford Rd.	N/A	Pipe (Poly)	Single Culvert	24" dia	2 ft	Asphalt	None	2006	YES	Both ends of pipe are undermined	6	Moderate debris DS	6	Clear vegetation and debris, monitor undermining at pipe ends	Plastic pipe generally good condition, but damaged on upstream end. No headwalls, loose stone laid on down stream end.
5		Bradford St.	N/A	Pipe (Clay)	Single Culvert	24" dia.	4 ft	Asphalt	US - wood DS - none	N/A	NO	None	N/A	Downstream is a pond	6		ungrouted masonry headwall and channel outlet. Inlet headwall is failing (ungrouted stone) Pipe half filled with sediment. Pavement is in poor condition.
6		Central St.	N/A	Granite Slabs/30" CMP at outlet	Single Culvert	48" W x 30" H	< 1' at ends, 3' middle	Asphalt	US - guardrail DS - wood	N/A	YES	Minor @ pipe at inlet	5	Channel is constricted with rocks/debris	6		Rusting and section loss at inlet. Partial collapsing of outlet headwall (missing stones). Flooding issues due to heavy rain.
7		Central St.	N/A	Pipe (Concrete)	Single Culvert	24" dia.	2 ft	Asphalt	US - none DS - wood	N/A	YES	None	7	Pond upstream and downstream	5	Grout stones at outlet headwall. Remove debris	Headwall at outlet is leaning. Inlet at pond on private property
8		Central St.	N/A	Pipe (Metal)	Single Culvert	36" dia.	6 ft	Asphalt	None	N/A	NO	Some flow under pipe	6	Rock and debris in channel	6		Corrosion and section loss for first 5' of pipe. Headwalls are concrete
9		Christopher Rd.	N/A	Pipe (Metal)	Single Culvert	36" dia.	3 ft	Asphalt	None	N/A	NO	None	7		7		Vertical crack in downstream headwall. Inlet on private property
10		Cross St.	N/A	Concrete/Granite	Slab	63" W x 48" H	< 1 ft	Asphalt	US - wire DS - wood	N/A	NO	None	7		7		Masonry abutment with granite slab. Last 5' at downstream end is concrete abutments and slab.
11		Cross St.	N/A	Pipe (Metal)	Single Culvert	24" dia.	3 ft	Asphalt	None	N/A	NO	minor at outlet	7		6		Some crushing of pipe at outlet (could have been at construction). Grouted masonry at inlet, dry stacked masonry at outlet
12		Daniels Rd.	N/A	Pipe (Metal)	Single Culvert	24" dia.	3 ft	Asphalt	None	N/A	YES	minor at US wingwall	6		5	Rebuild downstream headwall and wingwall	Bank erosion downstream. Appears downstream headwall and wingwall have collapsed
13		Dodge Rd.	N/A	Pipe (Clay)	Single Culvert	28" W x 15" H	3 ft	Asphalt	None	N/A	NO	None	6		3	Replace	Appears headwall, wingwalls, and pipe have collapsed at outlet. Depression in road above pipe.
14		Dodge Rd.	N/A	Pipe (Metal)	Single Culvert	24" dia.	5 ft	Asphalt	None	N/A	NO	None	N/A	Wetlands	7		Riprap slope at inlet, perched outlet. Minor erosion of outlet bank.
15		Dodge Rd.	N/A	Pipe (Metal)	Double Culvert	2 - 12" dia.	4 ft	Asphalt	None	N/A	NO	None	6	Heavy debris in downstream channel	5		Gaps in stones at inlet and outlet. Perched outlet, bottom of pipe with 100% section loss for approx. 3' (water does not flow out end of pipe)
16	R11005	Dodge Rd.	Mill River	Concrete	Arch-Deck			Asphalt		2009					7		See MassDOT Inspection Report for further information
17	R11002	Glen St.	Mill River	Concrete	Arch-Deck			Asphalt		1850					4		See MassDOT Inspection Report for further information
18		Haverhill St.	N/A	Pipe (Metal)	Single Culvert	24" dia	7ft	Asphalt	DS - metal gr US - metal gr	N/A	YES	None			5	Rebuild upstream headwall	Downstream end of pipe si rusted with minor section loss, wingwalls are spalled ans cracked. Upstream pipe not visible. Headwall condion is poor with spalling and sink hole behind.

Conceptual Cost Estimates

Town of Rowley Bridge and Culvert Evaluations:

Glen Street over Mill River (R-11-002)

Conceptual Cost Estimate

Scope of Work:

Replace structure

Construction Costs

Items/ Description	Unit	Unit Cost	Quantity	Item Cost
Demolition (remove existing superstructure)	LS	\$ 50,000	1	\$ 50,000.00
Bridge Excavation	CY	\$ 40	180	\$ 7,200.00
Gravel Borrow for Backfilling Structures	CY	\$ 60	400	\$ 24,000.00
Prefabricated Bridge	LS	\$ 325,000	1	\$ 325,000.00
Highway Guardrail	LF	\$ 70	200	\$ 14,000.00
Asphalt overlay	TON	\$ 300	22	\$ 6,480.00
Erosion Control	FT	\$ 20	240	\$ 4,800.00
Signing and Pavement Markings	LS	\$ 10,000	1	\$ 10,000.00
Temporary Shoring/Control of Water	LS	\$ 75,000	1	\$ 75,000.00
Mobilization	LS	\$ 20,000	1	\$ 20,000.00
Subtotal:				\$ 536,480.00
Contingency: 25%				\$ 134,120.00

Design Services

Bridge/Highway Design:	\$ 80,000.00
Survey:	\$ 6,000.00
Permitting:	\$ 12,000.00
Geotechnical:	\$ 8,000.00
Hydraulic Report:	\$ 9,000.00
Subtotal:	\$ 115,000.00

Miscellaneous

Traffic Management and Detour	\$ 10,000.00
Subtotal:	\$ 10,000.00

Project Total: \$ 795,600.00
Total Conceptual Estimate: \$ 796,000.00

Additional Details on above items:

Design fee estimated based on percentage of construction cost.

Assumes all work can be performed within the right-of-way.

A contingency of 25% for unknowns has been provided.

Further design is needed and this estimate has been prepared for planning purposes.
