Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

As a college student in Massachusetts, I have the luxury of going home to a different state. But that also means that's I recognize my responsibility to care for the community that has taken me in over the past few years, and to fight for them.

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities. We need to fight for them.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases. We already have the technology to use clean energy entirely, so let's do it.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

I urge the DOER and Governor Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

The IPCC report makes it clear that in order to avert catastrophic climate change, we need to make a swift transition to clean, renewable energy. Incinerating biomass is not a clean energy solution. It will send a pulse of carbon into the atmosphere just when we need to draw down levels of CO₂. By the time new trees have grown in, replacing the ones that were burned, we will have broken the back of the climate. You can't re-freeze the polar ice caps and glaciers that melted while you were burning up the forests.

Besides, as the IPCC also makes clear, intact forests are crucial to sequestering carbon.

To make matters even worse, biomass and trash incineration are bad for our health, releasing toxic particulates that cause serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Massachusetts has been a leader in increasing renewable energy to protect our health and climate. Let's not reverse course by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration.

I'm calling on you to stop using any renewable energy subsidies for incineration. Let's protect our health and climate for years to come.

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Burning biomass puts 50% more CO2 into the atmosphere than coal. It creates an incentive to destroy forests -- and when trees are burned, they cannot replace themselves in our lifetimes. This is NOT a renewable energy source!

Biomass and trash incineration are bad for our health. Particulate matter from burning wood causes and exacerbates asthma and heart disease. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Last week I attended a lecture by Bill Moomaw, professor emeritus of international environmental policy at Tufts, and he gave some compelling reasons why biomass and trash incineration are not at all "green" solutions for energy production.

Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration has a negative impact on the health of all people who live near these polluting facilities.

Further, as is typical, biomass and trash incineration facilities tend to be located near areas where the population is primarily low income people of color. It is time to stop dumping on the least fortunate residents of the state and find a cleaner alternative.

Burning wood for energy is not only dirty, but it is a waste of trees that could otherwise help sequester carbon from the atmosphere just by being allowed to exist for longer. In a cost-benefit analysis of burning trees for energy, it makes much more sense to let trees stay standing. The long term cost to the environment and the climate is much greater than the benefit of burning biomass to produce energy.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. I am urging you to do all you can to not reverse that progress.

Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

The Department of Energy Resources and Governor Baker need to stop using financial resources dedicated to renewable energy from funding biomass and trash incinerators. These two forms of energy production, though they are, to some extent, "renewable" generate energy at too high a cost to air quality. There is no community in Massachusetts, especially not the city of Springfield, whose residents should be forced to breath air made toxic by trash and biomass incineration.

Truly renewable energy (i.e. energy driven directly from the sun) or less directly by wind power) can be generated with virtually no negative impacts in air quality, and with the now-competitive cost of solar and wind-based generation, these should be the technologies Massachusetts invests in. No trash/biomass generator for Springfield.

No trash/biomass generators for Massachusetts.

Thank you.

Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Biomass and trash incineration are bad for our health. When we incinerate trash and wood that includes things such as pressure treated lumber which does have toxins and plastics which when burned produce toxins. Unless the biomass plant has a scrubber these toxins are going into our atmosphere affecting people who live near the plant the most but air currents will bring these toxins to other places causing respiratory problems like asthma as well as heart disease, cancer, and other serious health problems.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. Trees take in carbon and when their wood is burned those carbons are released. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

John Wassam,

Please do not use subsidies intended for alternative green energy on biomass and trash incineration.

The whole point of these subsidies is to move away from practices that are bad for the environment and for our health. Biomass and trash incineration will only worsen the air quality and accelerate the climate heating.

There is no time to waste.

We need remain focused and committed to funding alternative clean energy and stay away from heat generating, polluting industries.

John Wassam,

Dear Governor Baker:

When I'm not working, I spend my available time trying to cut carbon emissions in Boston and our state, and trying to head off a little bit of the climate disaster that's coming at us. I've already felt the impact: at great expense, I and my brothers had to move a tiny summer home on the Cape up from the tidal marsh we thought was safe from sea level rise and extreme storms.

So -- please do NOT continue pushing renewable energy subsidies for biomass and trash incineration in our state. These are among the most carbon-intensive energy options you could find. They also aggravate asthma, heart disease, cancer... and in Springfield, where you are supporting a proposed biomass plant, asthma is already through the roof. Your administration's support for environmental justice is already tepid enough without adding this insult.

Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

John Wassam,

Here's a chance for us to be together, to improve all our lives:

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Well-intentioned people can make mistakes, especially when they stop doing the math when it suits not when the calculation is done.

Physics doesn't care about all our fancy talk. And we live in a physical world. We depend on systems that we have pushed too far. It is time to pay better attention. Right now:

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration.

I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

The only type of biomass that creates clean renewable energy is when farms and food processing manure and wastes are used to create methane that can then be used to generate heat or electricity.

When Biomass and trash are incinerated toxic air pollution creates health problems. Incineration adds co2 and pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. John Wassam,

Here in Natick, we have Community Choice Aggregation that offers a 100% Class 1 Renewable option. We would like to see EVERYONE move to this model to stop contributing to the global climate crisis!

That is why I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

At best, this is a misleading policy decision, and at worst, it's bad for our health and endangering future generations!

Would you be willing to live next to a trash incinerator? Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems.

Also, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Once upon a time, biomass and trash incineration were perceived as good ideas because they could reduce our reliance on foreign oil and conserve our finite supply of fossil fuels. However, in light of what we now know about the imminent threat of climate change, we must update our criteria for what types of energy sources should be encouraged by state policy.

From the perspective of both climate change and public health, incineration of either biomass or trash are at least as bad as the fossil fuels that we must migrate away from ASAP. I'm therefore calling on you to stop using any renewable energy subsidies for incineration.

Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

Lastly, these biomass & trash incinerators are often built in poorer or working class neighborhoods. These neighborhoods already have exhaust from cars & pollution from other businesses. They should not have to have their health burdened with additional pollution. These are the people in our society with can least afford this toxic exposure.

Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

Stop renewable energy subsidies for all biomass and trash incineration in Massachusetts! Incineration pollutes our air with toxic chemicals and exacerbates climate change at a time when we must be doing everything in our power to stop it. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state. It is unacceptable that these particular "burning" methods will increase human morbidity and mortality.

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Biomass and trash incineration may be a necessary alternative to the use of landfills. However, they are frequently bad for health and should only be used with advanced filtering devices to minimize polluting the air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease and cancer.

Furthermore, biomass incineration simply returns the carbon dioxide to the atmosphere. So while technically it could be classified as renewable, practically it does not reduce emissions and also has harmful health effects in most cases.

We have already made great strides towards increasing renewable energy to protect our health and climate here in Massachusetts. so let's not backtrack. We certainly don't have time to use energy sources that continue to emit greenhouse gases.

Funds set aside for clean, renewable energy should never be used to support biomass and trash incineration (which is anything but clean, at best, highly polluting at worst). Please use renewable energy subsidies only for clean as well as renewable energy sources such as wind and solar (and possibly small-scale hydroelectric).

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration. It is urgent that you act now to protect our health and climate for years to come.

Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

Subject: Keep biomass & trash incineration out of the RPS

John Wassam,

The Department of Environmental Resources and Governor Charlie Baker's administration must stop renewable energy subsidies for all biomass and trash incineration in our state.

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration has a negative impact on the health of all people who live near these polluting facilities.

Additionally, biomass incineration exacerbates climate change at a time when we must be doing everything in our power to stop it. The recent IPCC report gives us only 12 years to completely reverse course before we experience the worst effects of climate change.

Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We should not be investing in energy sources continue to emit greenhouse gases.

Massachusetts has made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. Please halt the use of renewable energy subsidies for incineration.

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.

Subject: Keep biomass and trash incineration out of the RPS

John Wassam,

I'm calling on the Department of Environmental Resources and Governor Charlie Baker's administration to stop renewable energy subsidies for all biomass and trash incineration in our state.

Biomass and trash incineration are bad for our health. Incineration pollutes our air with toxic chemicals that can cause respiratory problems like asthma as well as heart disease, cancer, and other serious health problems. Incineration will have a negative impact on the health of all people who live near these polluting facilities.

Further, biomass incineration will exacerbate climate change at a time when we must be doing everything in our power to stop it. The recent Intergovernmental Panel on Climate Change (IPCC) report gives us only 12 years to completely reverse course before we experience the worst effects of climate change. Massachusetts has already begun to feel the effects, with some of the hottest summers on record and serious flooding on the coast. We don't have time to invest in energy sources that will continue to emit greenhouse gases.

Massachusetts has already made great strides towards increasing renewable energy to protect our health and climate. Let's not reverse that progress by using funds set aside for clean, renewable energy to fund dirty, polluting industries like biomass and trash incineration. I'm calling on you to stop using any renewable energy subsidies for incineration to protect our health and climate for years to come.
