I'm Don Ogden from the Enviro Show broadcasting and podcasting from WMass. I keep asking myself..Why are we still clearcutting our forests for solar?

There is no mitigation for destroying natural carbon capturing forests and allowing all the stored carbon to reenter the atmosphere. There is no minimization for such unnecessary destruction which literally endangers the public and future generations.

As we have been saying and testifying for years now, forests and trees are some of the few natural solutions available to us. They capture CO2 and other emissions daily, year after year after year for free and store the carbon safely away for the life of the forest. Why on Earth, in the midst of the Climate Crisis, would anyone want to destroy trees and forests? Why would anyone want to make future generations' world less livable?

Let me just say in closing: Future generations will look back in horror when they discover we clear cut forests for short lived solar arrays.
