

Massachusetts Department of Energy Resources
Commissioner Judith Judson
100 Cambridge Street, Suite 1020
Boston, MA 02114

Please accept these comments in response to the emergency regulations on the Solar Massachusetts Renewable Target (SMART) program. We are a solar installer in Ashland, MA that employs 55 people. We have installed over 1500 residential and commercial solar projects in Massachusetts since we were founded ten years ago. Below, we suggest several critical improvements to the SMART program that we hope you will adopt in the final regulations and tariffs. Continued solar growth is critical to the Massachusetts economy and keeping our environment clean and safe for our families and future generations.

The SMART program should be improved by:

1. *Setting the base compensation rates at a level that will encourage continued solar development and protect solar jobs in the Commonwealth.* The competitive process to set these levels should be allowed a higher ceiling, \$0.175 per kilowatt-hour, to insure the entire program will work in the years to come. At the same time, additional support (adders) for community solar, low-income solar and other priority development should be protected from decline over time to ensure continued and accelerated growth of these types of projects given their relatively stable additional cost.
2. *Removing the hard caps on these adders, so that community solar, low-income solar and solar with storage are encouraged as much as possible.* Caps on the total capacity of projects that can qualify for these adders, proposed at 320 megawatts, conflict with the purpose of the legislation in promoting these important projects. The caps and decline in adder value should be eliminated, or modified to initiate a more gradual decline in adder value instead of a sharp cliff.
3. *Encouraging the continued use of solar net metering to fairly compensate solar customers for their valuable solar power.* The SMART program has not proposed an adequate replacement for net metering and will not be successful without the continued existence of fair and full compensation for solar customers in the Commonwealth. DOER needs to take action to ensure that the proposal for an alternative on-bill crediting mechanism can become a workable, complementary option for community shared and low-income solar projects. There needs to be an open, transparent process into the development of this mechanism before it is proposed to the Department of Public Utilities. In parallel, DOER should work with the legislature to raise net metering caps immediately.
4. *Ensuring total compensation for residential systems is adequate to support continued sustainable development.* We are concerned that compensation for the under-25 kW and

residential market segment is inadequate. This is due to the shorter, 10-year term for these projects and the differing economics of residential solar systems. To ensure that residential project can work for customers' needs throughout the SMART program, DOER should raise the under-25 kW compensation to 250% of the base rate and the Low-Income under-25 kW factor to 300% as well as expanding their ability to receive adders.

5. *Clarifying and improving new land use and siting criteria, performance standards and greenfield subtractors.* As written, the current regulations lack sufficient clarity and specificity regarding land use performance standards for ground-mounted projects. In general, performance standards must be defined in such a way as to not unreasonably hinder the development of ground-mounted projects. The SMART program should also give deference to cities and towns that have gone through the time and effort to identify and zone areas as appropriate for solar/power generation, and projects in these areas should not be subject to a subtractor.

Thank you for your work to continue Massachusetts' continued solar leadership. We appreciate the opportunity to weigh in on the new SMART program and hope you will make these much-needed changes.

Sincerely,

Matthew J. Arner

President
