

Dear Commissioner Commissioner Judith Judson,

The Solar Massachusetts Renewable Target (SMART) program sets incentive levels for system 25kW at 150% of Clearing Price for 20 years. That makes no sense at all, a system that's 26kW makes 50% MORE revenue than a system that's 25kW! Please help make sure small residential projects (99% of the systems installed in the state) are financially viable.

Sincerely,
Aaron

Sincerely,

Aaron Simms
