

Hello.

I want to register my strong support for maintaining the current level of solar incentives, not lowering it.

The SREC program has played an important role in making Massachusetts [a leader nationally](#) in the adoption of renewable energy. I know it's helping me buy a PV system, which I expect to install this fall.

But we need to keep going. According to the Union of Concerned Scientists, we're [at risk of overreliance on natural gas](#). Among other problems, natural gas prices are historically volatile.

Thank you for your consideration.
