

# **Financing Sustainable Water**

#### **Agenda**

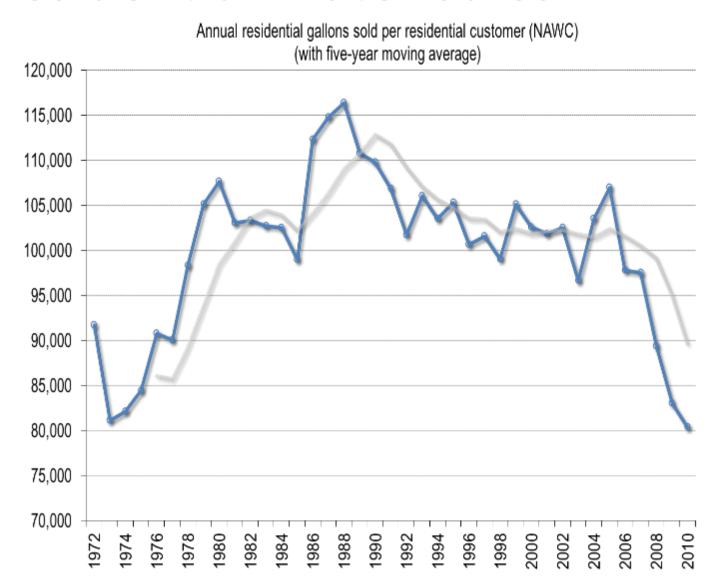

```
8:45 am – Check-In and Breakfast
9:00 am – Welcome and Opening Remarks
9:15 am – Strategies for Aligning Rates, Revenue and Resources
10:15 am – Break
10:30 am – Effective Rate Modeling in an Uncertain World
11:15 am – Water Supplier and Commissioner Perspectives:
       How to Get to Yes on Rates
12:00 pm – Lunch and Networking
1:00 pm – Setting Water Rates in MA: Important Lessons
               Learned from Suppliers
1:30 pm – Break
1:40 pm – Rate Model Case Study
2:30 pm – Adjourn
```

# Utility Financial Management: Becoming Harder Than Ever?

#### **Residential Water Sales**

## Isn't this a Success Story?

- ► Yes, but with side effects
- Lowered demand means reduced sales revenue
- Reduced sales revenue can mean not fully collecting fixed costs
  - Short-run variable costs (water, pumping energy, chemicals)
  - Long-run capacity costs (supply, transmission, storage, treatment)
- Revenue stability therefore becomes an issue and conservation is often blamed
- ► Left untreated, long-term unstable revenue collection can affect bond ratings

#### Texans Answer Call to Save Water, Only to Face Higher Rates

By NEENA SATIJA FEB. 8, 2014

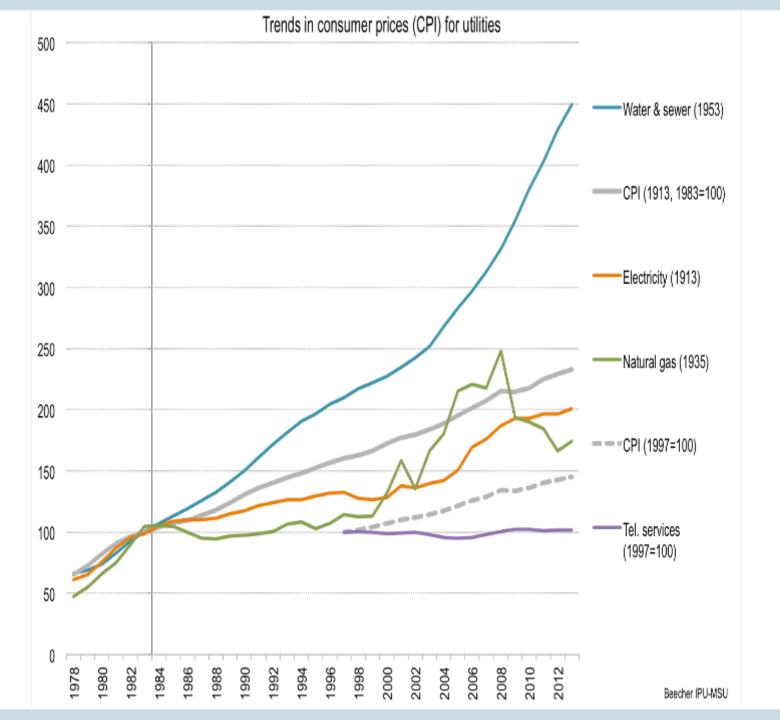

"The losses have prompted credit ratings agencies to look closer at the finances of public utilities in Texas. One agency, Fitch, downgraded some of Fort Worth's water and sewer debt last year, and last week the firm downgraded the debt of the city's wholesale water supplier. Fort Worth lost \$11 million last year because of water conservation."

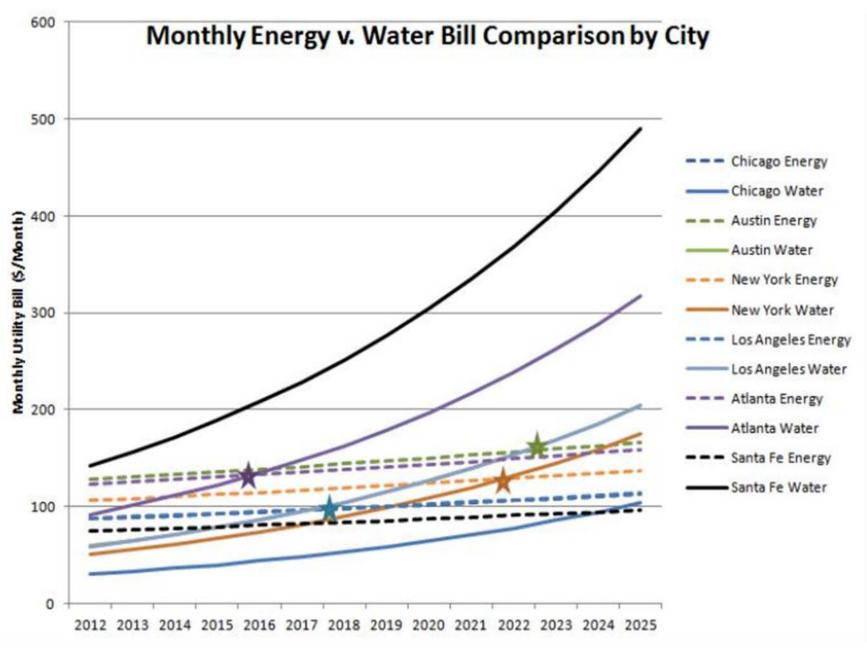

#### What Really Affects Revenue Stability?

- Reduced demand from:
  - efficient fixture replacement under the plumbing and appliance codes
  - active conservation programs
  - the recession: industrial shift layoffs, home foreclosures
- Reduced peak demand in wet years
- ► Increased infrastructure costs
- ► Rise in other fixed costs
- Continuing Inflation

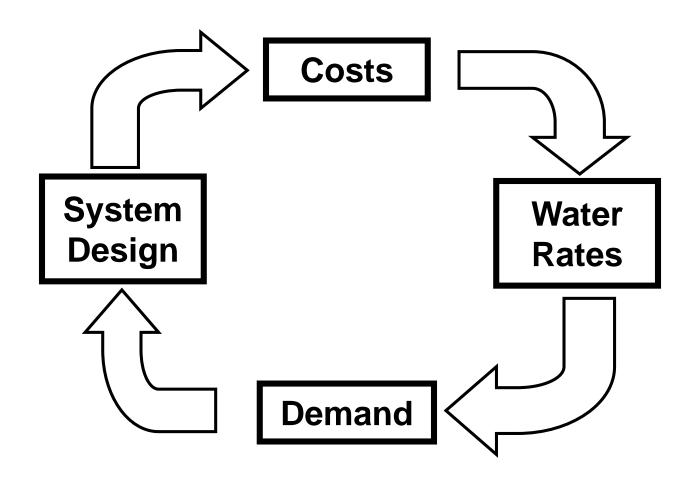

# Cost-Effective Efficiency and the Real Impact on Rates

#### Water Flow and Flow of Economic Logic

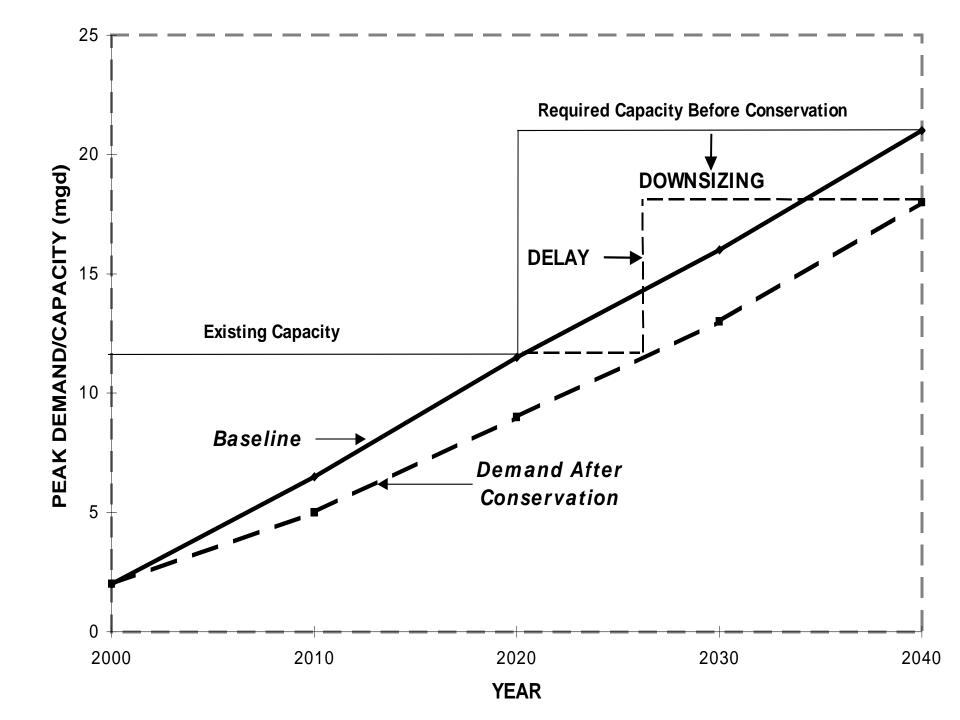

#### **Conservation is Part of the Solution**

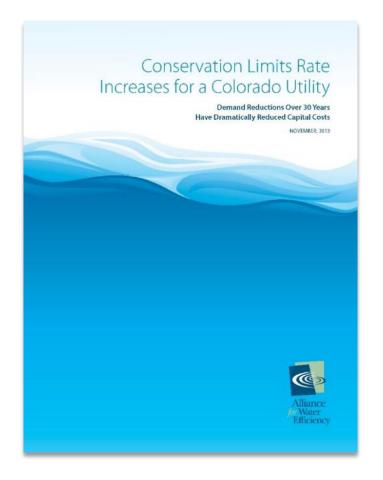

- ▶ It is a long-term cost reducer to the utility
- Revenue loss is often due to other drivers
- Every gallon saved is water that does not have to be pumped, treated and delivered
- Conservation is an investment and short-term effects must be planned for
- Reduced utility costs generally mean reduced customer rates in the long-term due to avoided infrastructure capacity increases

#### Westminster's Story

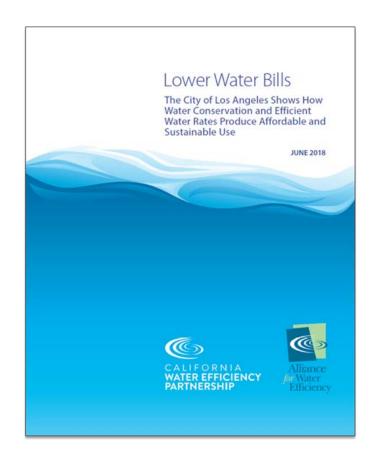

- Citizens complained about being asked to conserve when rates would just go up anyway
- Westminster reviewed marginal costs for future infrastructure if conservation had not been done
- ➤ Since 1980 conservation has saved residents and businesses 80% in tap fees and 91% in rates compared to what they would have been without conservation

## LA's Story

- Similar story with unpopular rate increases
- Study of costs avoided with water conservation programs
- Analysis completed in August,2018
- ► LA had \$11 billion in avoided infrastructure costs, which reduced customer bills by 26.7%
- ► Two other studies done in Arizona with similar results

#### What Will Your Story Be?

- Every story is different, with different drivers!
- Consider the key questions to determine the case for efficiency
- Where do costs come from and what are your future cost risks?
  - Wholesale water costs may be increasing
  - Costs of capital improvements
  - Short run variable costs (treatment, energy, etc.)
- ► What's your return on the investment in efficiency?
- ► How do you quantify it?
- ► AWE Tracking Tool provides forward-looking analysis

D Ν 0 AWE CONSERVATION TRACKING TOOL: UTILITY REVENUES & RATES WORKSHEET 2 Review revenue requirement and rate impacts: This worksheet calculates the impact of planned conservation on annual revenue requirement, average rates, and average bills. It assumes the volumetric revenues generated by the 3 baseline demand and rates forecasts correspond to the utility's volumetric revenue requirement. It then adjusts forecasted annual water sales and revenue requirement using the water savings, conservation program cost, and utility avoided cost estimates calculated earlier. The adjusted revenue requirement equals the baseline revenue requirement plus annual conservation program cost minus annual avoided water supply cost. The adjusted average volumetric 4 rate equals adjusted revenue requirement divided by adjusted annual water sales. The adjusted average monthly volumetric billequals adjusted revenue requirement divided by number of accounts divided by 12. Calculations are done 5 for two alternative financing strategies for planned conservation. The first strategy treats planned conservation as an operating expense. The model assumes planned conservation is paid for in the year it occurs (Pay-Go financed). The second strategy treats planned conservation as a capital expense. The model assumes planned conservation is debt financed. You can set the debt financing term using the drop-down list. 6 8 Select Chart to View 9 Debt Financing Term (Yrs): Years to Display in Chart: Chart Explanation Change in Rev. # **Financing Sustainable Water**

#### **FSW: Key Concepts**

- ► Revenue instability is a feature of <u>ALL</u> rate structures
- ► Efficiency objectives should be identified at the start
- One size does not fit all
- Embracing uncertainty enables better decision-making
- Better rate analysis requires good data
- Customer understanding and empowerment is key
- Sound financial policies can support fiscal sustainability

#### What is Financing Sustainable Water?

- Building Better Rates in an Uncertain World: A Handbook to explain key concepts, provide case studies and implementation advice
- ► AWE Sales Forecasting and Rate Model: Innovative, user-friendly tool to model scenarios, solve for flaws, and incorporate uncertainty into rate making
- ► FinancingSustainableWater.org: Web-based resources to convene the latest research and information in one location

#### The Heart of the Problem

- Water rates have traditionally been focused solely on historical cost-recovery
- When system costs change quickly, and perhaps unpredictably, historical rates do not reflect today's cost consequences
- ▶ Rates do not then give customers correct information to make consumptive decisions

#### **An Alliance for Water Efficiency Handbook**

#### BUILDING BETTER WATER RATES FOR AN UNCERTAIN WORLD

BALANCING REVENUE MANAGEMENT, RESOURCE EFFICIENCY, AND FISCAL SUSTAINABILITY

Thomas Chesnutt, A&N Technical Services

**SECTION I: Introduction** 

SECTION II: Today's Imperative for Utility Financial Management

**SECTION III:** The Role of Ratemaking

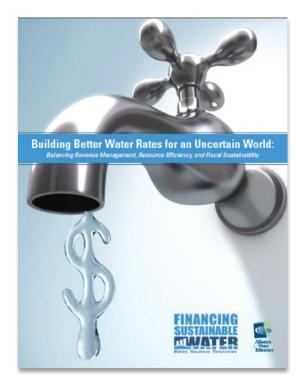

SECTION IV: Building a Better (Efficiency-Oriented) Rate Structure

SECTION V: Financial Policies & Planning for Improved Fiscal Health

SECTION VI: Implementing an Efficiency-Oriented Rate Structure

#### **Appendices**

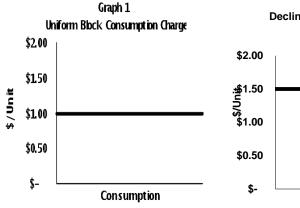

- Appendix A Costing Methods
- Appendix B Demand and Revenue Modeling
- Appendix C AWE Sales Forecasting and Rate Model User Guide

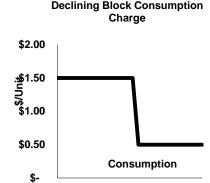

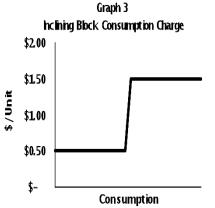

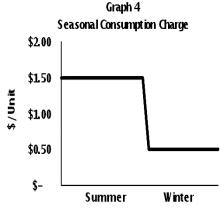

#### **Introduction to Rate Setting**

Graph 2

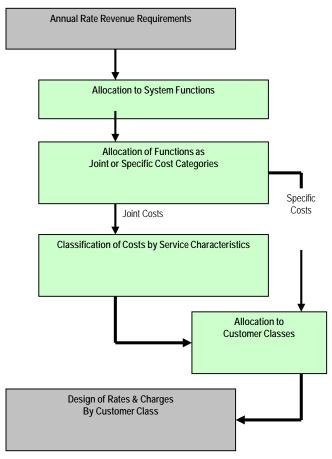

- Budget-based water rates
- Marginal/Incremental Cost pricing
- Volumetrically-based Fixed Charges
- "Value of Service" pricing
- Policy-based rates
- Drought pricing
- Additional "innovative" rate structures

#### **Building an Efficiency-Oriented Structure**

- Identify and Prioritize Ratemaking Objectives
- Determine Revenue Requirements
- Allocate Costs
- Design A Rate Structure
- Evaluate the Rate Structure against Objectives
- Decide on a Rate Structure

#### What Answers Are Needed?

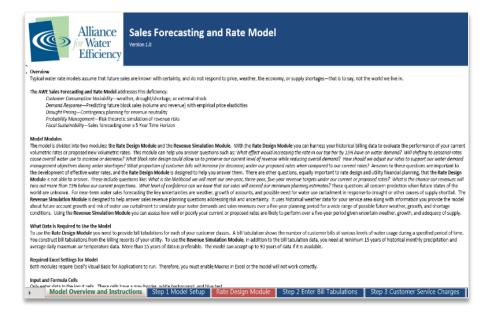

In an uncertain world, what information could lead to better water rates?

- Customer Consumption Variability—How can weather, drought/shortage, or external shock affect customer consumption?
- ► Demand Response—If I change rates, what happens to demand volume and revenue?
- ► Drought Pricing—How should I plan for water rates under the contingency of nonzero drought/shortage occurrence?
- Probability Management—What is the likelihood of deficit?
- ► Fiscal Sustainability—What are likelihoods over a 5-year time horizon
- ► Affordability—Can customers afford water service?

#### **Tools to Evaluate Rates**

- Modeling Water Demand Variability
- Modeling Water Revenue Variability
- Customer Bill Analysis
- Affordability Assessment
- Assessing Fiscal Sustainability
- ► The AWE Sales Forecasting and Rate Model can do all this!

#### **Affordability Resources**

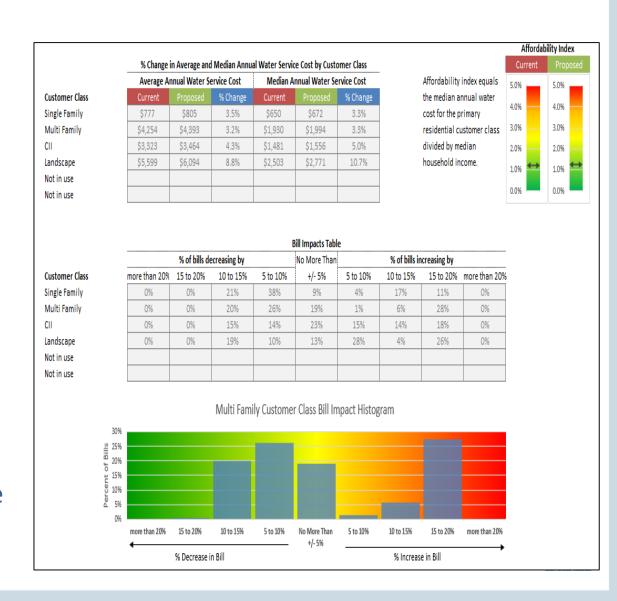

- Average Bills being less than some fraction of median income in community (as defined by USEPA) does not guarantee "affordability"
- Need in-depth, informative understanding of affordability in your service area
- Resources:
  - UNC EFC Water Rates Affordability Assessment Tool
  - The Affordability Assessment Tool for Federal Water Mandates from AWWA, WEF and the US Conference of Mayors

### **Affordability of Water Service**

- AWE Sales Forecasting and Rate Model helps anticipate the impact of rate changes
- This can be used to help clearly explain changes to customers, Councils and Boards
- Provides clarity,
  reassurance, and an
  opportunity to make
  changes before a rate
  adjustment takes place

### **Drought Pricing for Revenue Neutrality**

- Shortages are when, not if.
- Imposing curtailments on customers affects revenues.
- Drought rates that maintain revenue neutrality through various drought stages can be planned for, communicated, and effectively implemented.

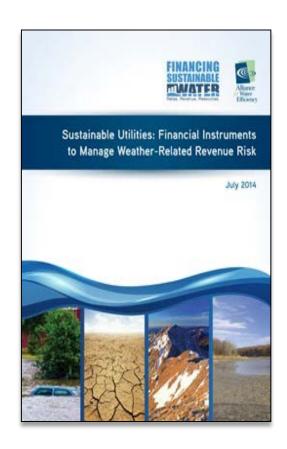

## **Managing Weather Risk**

- Wide swings in revenue between wet years and dry years
- Need to explore market-based financial tools for managing weather risk (insurance, derivatives)
- Example: municipal snow removal insurance
- AWE published white paper in 2014

www.financingsustainablewater.org

## **Financial Planning and Policies**

- Revenue and Expense Forecasting
- Revenue Management and Fiscal Sustainability
- Rate Stabilization Financial Planning
- Adaptive Rate Design
- Revenue Recovery Mechanisms
- Cost Recovery Mechanisms
- ► Conclusion: Transformational Change for Efficiency
- ► Case Study: Birmingham, Alabama (http://efc.web.unc.edu/2012/08/01/the-success-story-of-one-water-utilitys-financial-policies/)

## **Improving your Credit Rating\***

- 1. A Rate Stabilization Fund (used not too often)
- 2. A low dependence on connection fees
- Significant portion of revenues from fairly reliable customers
- 4. Insignificant additional upcoming debt
- Fully-funded pension and post employment benefits
- 6. Strong management team

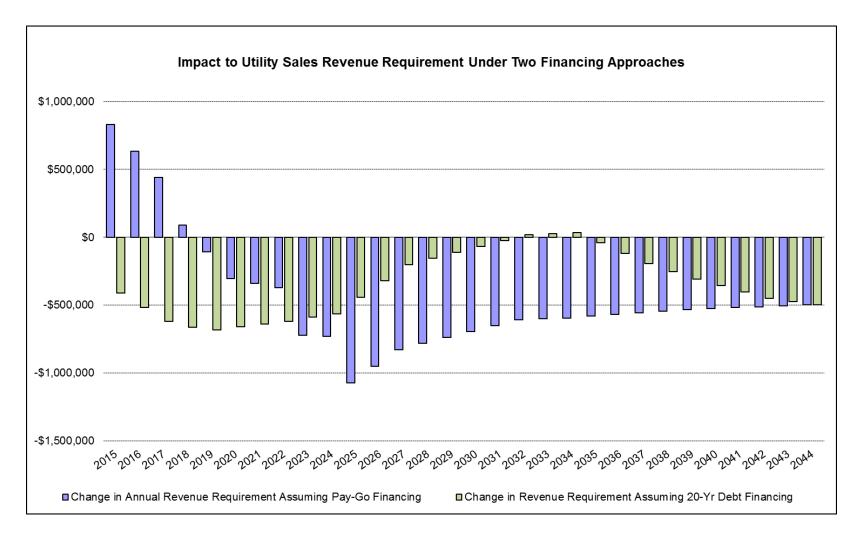

## **How Much is Enough in Reserve?**

- ► Policy Example: Contra Costa Water District
  - "The Rate Stabilization Reserve Fund will be drawn down to smooth rate increases consistent with the District's Rate Setting Policy and to ensure that minimum debt service coverage of 1.25 times annual debt service is met. Specifically, they will be applied in any year where other revenues are not sufficient to meet the required debt service coverage ratio of 1.25 times. They will also be applied if meeting only minimum coverage levels could result in the District's bond ratings being downgraded."
- ▶ Probability Analysis in setting appropriate reserve levels:
  - Sam Savage and Shayne Kavanaugh, The Sequestron Analytics Magazine, November/December 2013

## Revenue Requirement Impact

### Why not Debt Finance Conservation?

- Most utilities do NOT debt finance conservation
- ► Issue is Government Accounting Standards Board (GASB) rules
- Accounting principles require assignment of an "asset" to the debt
- ► Conservation is not "owned" by the utility it is usually on the customer's side of the meter
- ► Without "control of the asset" a utility CFO usually doesn't want to debt finance and have a liability without an asset on the balance sheet
- Solution: GASB will now allow as a "regulatory asset"

## **Other Financing Solutions**

- ► WIFIA
- Other Opportunities
  - Green/Climate Bonds
  - State Revolving Funds
  - Public-Private Partnerships
  - Tax Initiatives
  - State-level funding (Texas Water Development Fund)

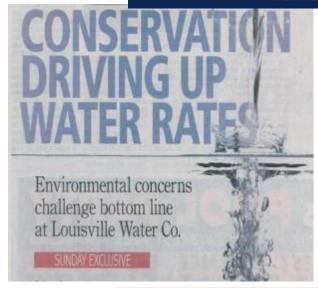

## **Communicating Change**

## The Political Reality

# courier-journal.com

- We don't like to revise our rates
- ► It is politically unpopular, so rates are changed as little as possible
- ► The inevitable inflationary increase is postponed until it is a crisis, much less increases in other costs
- Conservation is often blamed for financial challenges – even when there are no active conservation programs in place
- This sends the wrong message to consumers

### THE GLOBE AND MAIL

Reduced water use drains Toronto's funds for infrastructure upgrades

### Raleigh Public Record

Raleigh's Water Conundrum: Conservation v. Rates

### **Communicating the Value of Water**

### Customer Videos

- Explains water service and cost
- Pipes, plants, power and people that keep water flowing
- Video on Why Are Rates Rising?
- Both are Free for utility use!

### Water Rates Messaging

- Consumer-friendly language
- Explain that conservation keeps rates DOWN in the long term
- Use for speeches, talking points, press releases, etc.

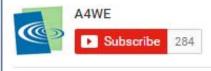

Every gallon saved is a gallon that doesn't need to be pumped, treated or delivered – those savings are reflected in your water bill. Conservation helps slow the rise of water rates over the long-term."

- Getting to Yes: Approval from Elected Officials
- Internal Communications and Customer Service
- ▶ The Public as Partners
- Clear Signals and Empowered Customers
- Maintaining Dialogue and Finetuning

## Let's Change the Conversation

- Water Rates Message Plan
- Jargon-free messages on:
  - The service and value water utilities provide
  - Benefits and value of efficiency investments
  - The need for a rate revision or new rate structure
  - The relationship between conservation and rates
  - The impact of drivers such as drought or water quality
- Customizable to tell your story!
- www.FinancingSustainableWater.org

#### **AWE Water Rates Message Plan**

The Alliance for Water Efficiency has developed a set of key messages for utilities implementing onservation and efficiency-oriented rate structures or rate revisions. These messages have been developed to help utilities communicate to ratepayers, the social, fiscal and regulatory challenges that all utilities face, without jargon. As more regions become concerned with drought, crumbling infrastructure and population growth, these messages highlight the benefits and value of promoting water conservation and the significance of investing and planning for long-term water use efficiency solutions. Finally, these key messages may be helpful to support outreach to drive change in public perception, as utilities implement new rate structures (or a rate revision), garner support for new water resources, cultivate local support to repair aging infrastructure, and seek to grow support to add modern, more reliable technology to sustainably resolve our water supply issues.

Messages are the "elevator pitch" for communicating with the public. Messages summarize issues and must be backed up by facts. Key messages help **prioritize** key points; **focus** the speaker on what is most important; and help ensure **consistency** across written and verbal communications.

Utilities change their rate structures or increase rates under these broad scenarios, including:

- o Drought or shortages of local water supplies (e.g. like pressures on groundwater);
- Operating and maintaining a reliable water system 24/7/365, including replacing aging infrastructure, responding to regulatory requirements, and addressing increasing costs (e.g. energy, safety):
- Population growth, including stretching existing supplies while building new capacity;
- Crumbling infrastructure and the significance of how a reliable water supply contributes to the growth and livelihood of the local economy;
- Regulatory mandates from local or state levels to ensure a safe and high quality supply of affordable and reliable drinking water; and
- Meeting sustainability objectives (e.g. long-term planning for the region and economy, including preparing our infrastructure to withstand extreme weather conditions, among many other disasters).

The messages have been developed to accommodate each utility's unique rate-setting scenario, and should be customized or adapted as needed to address specific challenges and/or objectives. For additional guidance on how to use these messages, please refer to the AWE Message Protocol and Q&A document on <a href="https://www.FinancingSustainableWater.org">www.FinancingSustainableWater.org</a>.

### Rates, Revenue, Resources.

Financing Sustainable Water is an initiative of the Alliance for Water Efficiency. It was created to provide practical information to guide utilities from development through implementation of rate structures that balance revenue management, resource efficiency and fiscal sustainability. This website will be updated frequently with new content and we encourage visitors to return often for additional information and resources. The Alliance serves as a North American advocate for water efficient products and programs, and provides information and assistance on water conservation efforts. Learn More
