

Benefits of Surplus Interconnection Service

Erin Smith

Clean Grid Director

Environmental League of Massachusetts

June 26, 2025

Benefits of Surplus Interconnection Service

1. Energy Affordability

- Leveraging the existing grid is less costly than building new infrastructure
- Enabling delivery of low-cost electricity from where it's produced to where it's consumed is critical for consumers to realize cost savings

2. Energy Reliability

- Enabling new resources to come online quickly is critical to keeping the lights on as energy demand grows

3. Equity & Clean Energy

- Leveraging the existing grid avoids unnecessary land conversion or overburdening disadvantaged communities to build new infrastructure

Energy Attributes vs. Energy
