All site models include funding for a vehicle. It's a little confusing to express the amount of van capacity that is embedded in the models for sites of eight or more, as the value of transportation in large capacity models slowly increases with the number of bed days until it is almost equal to the cost of operating two vans for the full standard annual mileage each.

Here a simpler way of expressing this.

Vehicles built into models:

Capacity 1	2 or 3	4 +
Sedan	Minivan	Van

You can add an extra vehicle or you can upgrade from the existing vehicle type to a larger vehicle.

Adding a vehicle:

The only additional vehicle that could be added to the sites using the old rates was a wheelchair van. The new rates allow areas/regions to add a sedan, minivan, van, or a wheelchair van.

Upgrading a vehicle:

The only vehicle upgrade rate available in the old system was to upgrade from a minivan to a wheelchair van. The rate was higher than necessary for sites of four and over that were already funded for a full van in the model budget. Now all possible upgrade choices are available.

Recommendation:

The current equivalents to the FY14-FY16 vehicle add-ons are marked in red below. If existing add-ons are correct, you should roll over to these defaults. The actual additions and upgrades may not have been to WC vans, since there were no other choices. When possible, vehicle upgrades / additions should be corrected now or during the first amendment.
