

Quincy Route 3A/Hancock Street Transportation Improvements Study

MassDOT’s Office of Transportation Planning is collaborating with the City of Quincy, the Massachusetts Bay Transportation Authority (MBTA), and the Massachusetts Department of Conservation and Recreation (DCR) to develop and evaluate potential future improvements to Route 3A/Hancock Street in Quincy between the Neponset River Bridge and the Southern Artery.

What is being done?

This is a conceptual planning study looking at current transportation conditions on Route 3A/Hancock Street in Quincy, Massachusetts. The study team will assemble traffic data and use this to create a model of current and future travel conditions, which will be used to develop improvement recommendations. As this is a conceptual planning study, engineering plans will not be developed and there is no construction planned at this time.

What is the study area?

The study area for this effort extends along Route 3A/Hancock Street from the Neponset River Bridge to the Southern Artery. The study team will also consider access to/from the MBTA Red Line stations (North Quincy and Wollaston), as well as interactions and operations at the northern intersection with Quincy Shore Drive.

How can I find out more?

Please visit the project website below for more details, to sign up for updates and email alerts, and to view the latest resources on the Quincy Route 3A/Hancock Street Transportation Improvement Study. MassDOT welcomes your input on current conditions and ideas about what could be done in the future. Email us using the address below.
