Report on Property Tax Classification

Introduction

As required by Chapter 3 of the Acts of 2004, the Department of Revenue (DOR) has prepared this report to the Legislature on property tax classification.

Specifically, the purpose of the study is to determine methods for addressing the situation where residential and commercial, industrial and personal property (CIP) values diverge, causing abrupt shifts of the tax burden. The legislation also requires that DOR examine ways to provide temporary tax relief to various taxpayers including increasing the residential exemption for low income residents, increasing elderly exemptions, increasing the state income tax deduction for renters, extending the payment period for property taxes and any other targeted relief. Chapter 3 also asks DOR to compile extensive data from all cities and towns on the tax burden by class, delinquent taxes, in lieu of tax agreements, 121A agreements and all tax relief programs.

To assist us in the preparation of this report, DOR held four, separate hearings seeking comments from local officials, residents, business owners and other citizens. These hearings were held on April 30th, 2004 in Springfield, on May 4th in Worcester, on May 11th in Fall River and on May 18th in Boston. During these hearings, participants made oral statements and disseminated written comments to the DOR employees serving as hearing officers. The panel was chaired by Alan LeBovidge, Commissioner of Revenue and staffed by Gerard D. Perry, Deputy Commissioner of the Division of Local Services and Frederick Kingsley, Bureau Chief of the Municipal Data Management and Technical Assistance Bureau. We also solicited written comments on property tax classification and tax relief from local officials and other interested parties that subscribe to our e-mail distribution network.

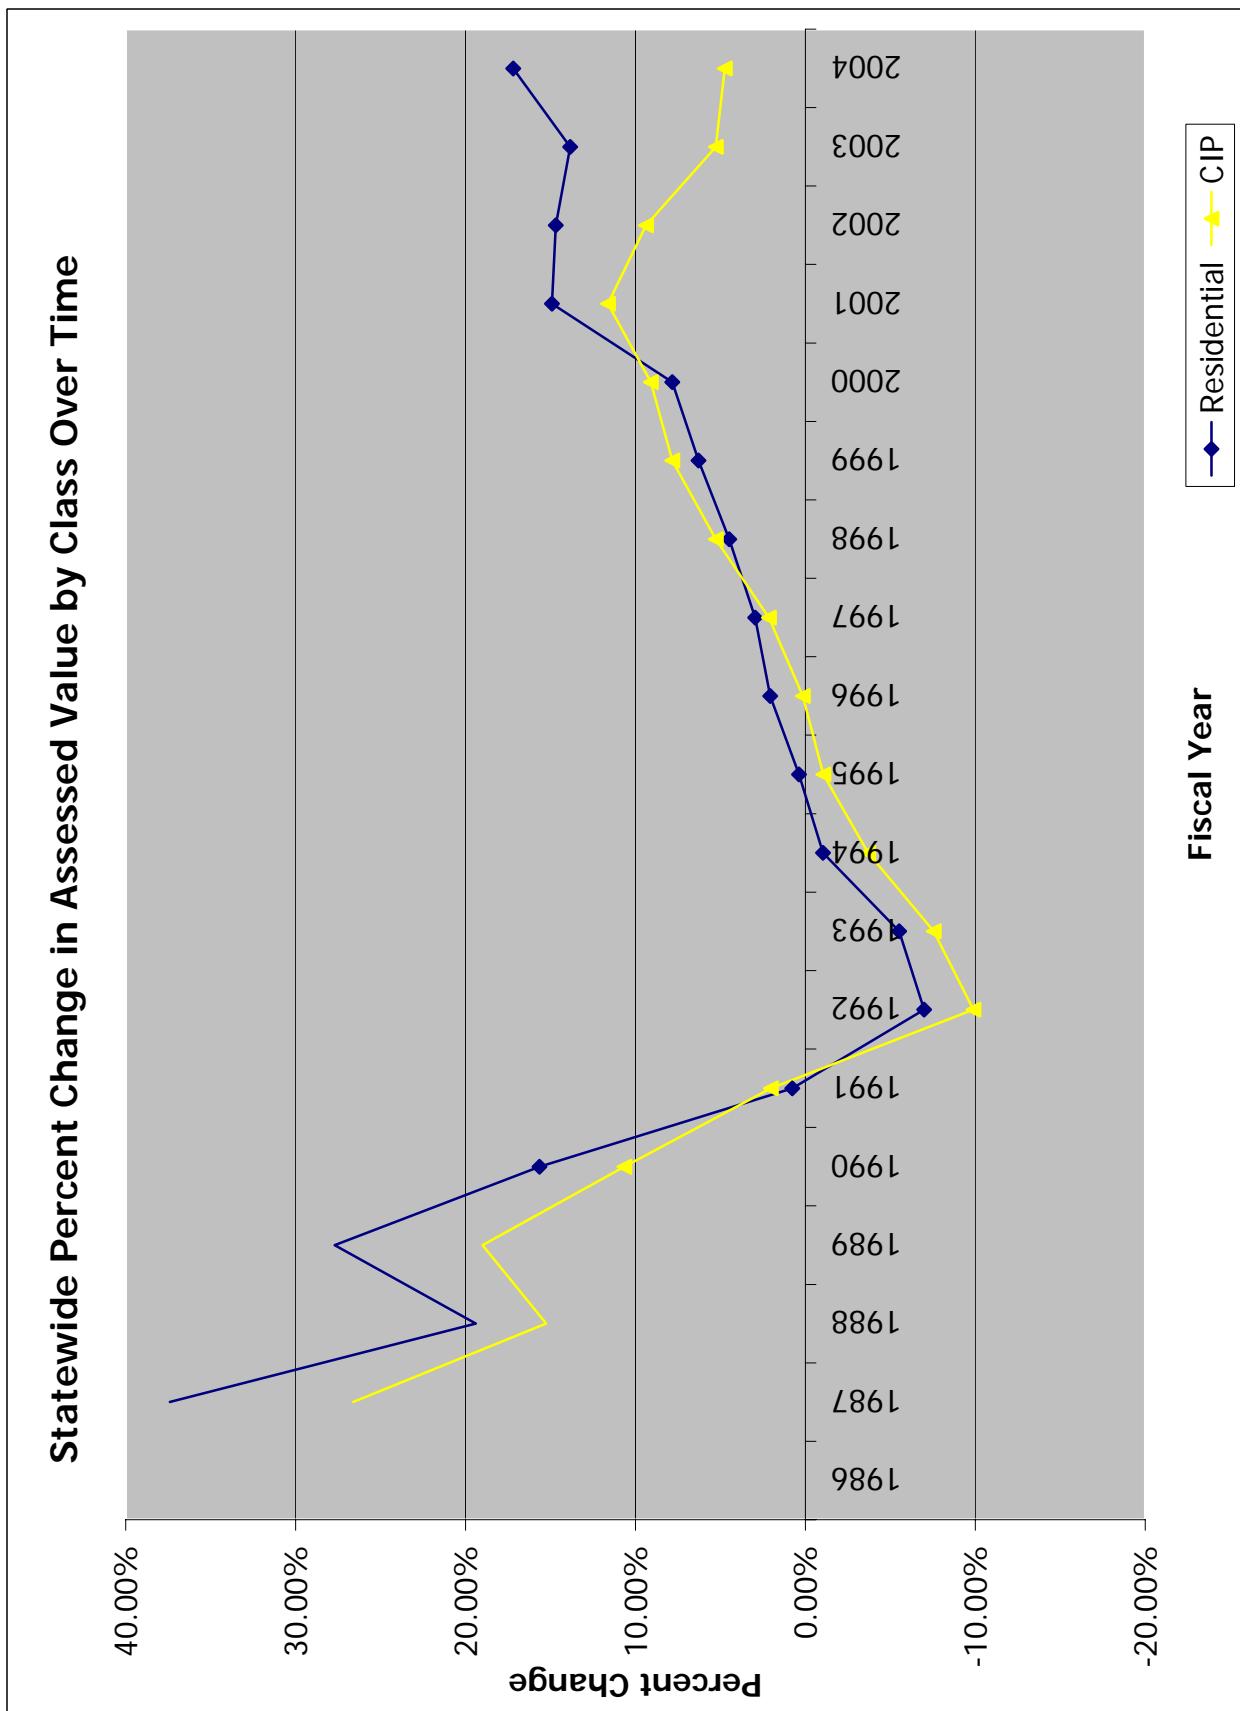

Executive Summary

In the last few years, real estate market conditions have been such that residential properties have appreciated at a far greater rate than CIP properties. For example, in FY04 residential values increased statewide by 17.2 percent while CIP values increased only 4.7 percent (See Graph 1 on next page). In many communities, these conditions have caused a significant increase in the share of the tax burden borne by the residential class.

To address this situation, the Legislature adopted Chapter 3 of the Acts of 2004 that temporarily increased the allowable shift of the tax burden to the CIP classes to 200 percent and reduced the minimum residential burden to 45 percent. These percentages refer to the amounts these classes would bear under a single tax rate. For example, CIP properties in Boston comprised 33 percent of the total assessed valuation in FY04, yet paid 66 percent of the total tax levy when the city implemented the 200 percent shift. The limits move back incrementally to the 175 percent maximum shift and the 50 percent minimum residential factor by FY08. In FY09, communities that exceeded the 175 percent limit in any year from FY04-07 are required to reduce their CIP shift to no more than 170 percent.

Chapter 3 proved to be effective in limiting residential tax increases for those that adopted it, as eight of the thirteen communities had increases in the average FY04 single-family tax bill of less than the state average increase of 6.5 percent (See Table 1 of the Appendix). Of the other communities, Boston saw the largest increase in the average bill (14.45 percent) due to decreased values in the city's large commercial class and the rapid appreciation in the residential class.

While Proposition 2½ has been effective in limiting the growth in the overall property tax burden, it does not address the manner by which that burden should be allocated among various classes of taxpayers. At the same time, reductions in state aid in recent years have also caused some municipalities to lean more heavily on the tax levy, drawing down excess taxing capacity and placing more Proposition 2½ overrides on the ballot. Statewide, excess levy capacity decreased from about \$205 million in FY01 to \$174 million in FY04. Operating overrides that permanently increase local levy limits rose statewide from \$6.5 million in FY00 to \$48.8 million in FY03 and \$40.4 million in FY04. Although these influences have been fairly modest when viewed on a statewide basis, they have affected some municipalities disproportionately.

In recent years, divergent property values by class have also caused the residential class to bear a greater percentage of the total tax levy. This is true of communities that use a single tax rate for all classes, as well as communities that are at or near their maximum shift percentage to the CIP class. Communities below the maximum shift have more flexibility to mitigate the impact to the residential class by increasing the shift to the CIP classes.

While we have serious doubts about a property tax system that allows the CIP classes to be taxed at such high rates, we recognize that classification is firmly entrenched in Massachusetts. However, we found that there is little justification for classification other than the politically expedient outcome of keeping the residential tax burden low. Clearly, authorizing ever-increasing shifts to the CIP classes is not good public policy and, at some point, raises constitutional issues. Though not the primary factor when businesses make locational decisions, higher CIP taxes also serve as an impediment to attracting and retaining business in certain communities.

During our review, we found that local assessing practices in some communities played a significant role in the abrupt tax increases facing the residential class. In fact, many communities that opted for the increased shift were scheduled for state certification in FY04 to verify that assessments reflected full and fair market value. We found that several of these communities had made little or no effort to adjust property values in the two years prior to FY04. This created a situation where three years of accumulated appreciation, in some cases as much as 50 to 60 percent, had to be recognized in one year.

Effective beginning in FY05, a new DOR reporting requirement will help alleviate abrupt shifts in the residential tax burden. Local assessors will now have to submit a report annually, prior to getting their tax rate approved, which demonstrates that assessments are at or near the statutory standard of fair market value and that there are not significant variances in assessment levels among property classes. This will eliminate the practice of not adjusting values to reflect market conditions in the interim years between triennial certifications.

In some cases, it appears that the reluctance to adjust these values annually arose as the community reached the maximum CIP shift. Failure to increase

residential values in the years between state certification became a means to delay tax increases to the residential class for as long as possible. When required to meet state certification requirements in FY04, however, these communities were confronted with significant increases in residential tax bills. This, in turn, created political pressure at the state level to increase the allowable CIP shift to 200 percent.

The new DOR requirement for interim year valuation adjustments will, we believe, be a significant factor in providing cities and towns with a more equitable approach to the allocation of the property tax burden.

In the report that follows, we examine three other methods to avoid abrupt shifts in the tax burden when values diverge. However, each has its limitations, including the possibility that amendments to the property tax system of this magnitude may be contrary to the “proportional assessment” provisions of the State Constitution.

One possibility is to limit the annual change in the percentage of the levy borne by each class. When values diverge, the amount of growth in the levy percent could be capped based on the prior year’s share (for example, no more than 110 percent of prior year’s levy share). While this method retains the flexibility of the current system, it may cause a CIP shift percentage to temporarily exceed the maximum allowed under current law. Similar to the way Proposition 2 ½ dealt with communities above the levy ceiling, this shift could be reduced gradually until in compliance with the maximum shift allowed.

A second approach is to establish separate levy limits for each class of property, thereby eliminating any shift in the burden among classes. This could be accomplished by dividing the current levy limit by the levy shares currently paid by each class. Going forward, each limit increased by 2.5 percent and new growth would be credited to the levy of the appropriate class. The downside of this approach is that it limits future tax policy flexibility by essentially locking in a particular shift. If a significant CIP taxpayer leaves town, there is no mechanism to lessen the tax burden on the remaining CIP taxpayers.

A third approach is to limit the annual growth in the assessed values. This approach is used in some other states and achieves the objective of limiting

abrupt shifts. In our view, however, it represents a huge step backward from the hard-won progress made in Massachusetts toward full and fair cash value assessments and equitable valuations both within and among property classes. This approach is also likely to run afoul with the state Constitutional standard requiring “proportional assessments” for property taxation.

While the above approaches, particularly the interim year adjustments to value, may be effective in limiting abrupt changes to the tax burden, if the long-term trend continues in the current divergent pattern, the residential class will inevitably pay more. In this context, the Legislature has asked about the various avenues to provide property tax relief to certain groups of taxpayers.

Currently, there are myriad options available to provide tax relief to various groups in Massachusetts. Generally, when these programs provide relief to one group, other local or state taxpayers must pay more. Often, the impacts are complex and cross between levels of government from local to state costs. For example, the residential exemption allows a substantial shift of the tax burden within the residential class from domiciled homeowners to apartments and vacation homes. Higher taxes on apartments means higher rents for some of the state’s poorest taxpayers with the cost borne, in part, by the state as more qualify for state tax relief through the elderly circuit breaker tax credit.

Consequently, we suggest changes to local option provisions for elderly tax relief that will allow communities to be more generous if they choose to be, but without shifting these costs to state government. The most significant policy option in this regard is to allow more flexibility in the locally granted elderly property tax exemptions (Clauses 41, 41B and 41C of MGL Ch 59, §5). This concept will allow communities with very high average residential tax bills to provide more tax relief to the elderly. We found that the outdated statutory restrictions on these exemptions have caused municipalities to grant many fewer, dropping from about 33,203 in FY92 (the earliest year for which we have data) to 20,359 in FY03.

The elderly exemption could be increased up to \$1,400 which is the amount necessary to provide the same level of relief in relation to the average single family tax bill as was provided in FY82. For example, the \$500 exemption covered about 48 percent of the average tax bill in FY82 (the earliest year we have this data for). Given that the average tax bill has increased from just over

\$1,000 in FY82 to \$2,894 in FY04, providing equivalent relief requires an exemption of about \$1,400. The eligibility criteria should also be updated based on inflation.

We also suggest amendments to the elderly property tax deferral program (Clause 41A of Ch 59, §5) to allow more elderly to qualify. Currently, this program is underutilized due to a variety of factors, including the largely emotional argument that the elderly want to maximize the assets to be passed on to their children. We don't find preserving family wealth for one's children to be a persuasive economic justification for not utilizing this deferral when a senior citizen has trouble paying a property tax bill. We suggest additional local option provisions to increase the income thresholds to the relatively generous levels allowed by the circuit breaker tax credit.

Other options such as a residential exemption for low-income homeowners, expanding the senior circuit breaker and extending the payment period for property taxes are less viable. However, we believe that the newly enacted hardship deferral (MGL Ch. 59 §5(18A)) will prove to be a useful mechanism for younger taxpayers in need of assistance.

Finally, we make important recommendations to improve the collection of income and expense data used to value commercial and industrial properties. Often local assessors have difficulty getting property owners to submit this data prior to determining valuations. We recommend that municipalities collect this information annually and that statutory penalties to taxpayers for failing to submit this data be increased to a percentage of the prior year's tax bill. The current \$50 penalty applies to all properties regardless of size or value and has proven to be an ineffective tool to ensure compliance with local assessors' requests for this information. We believe that more widespread compliance with these data requests will greatly assist local assessors in rendering accurate CIP valuations. We also suggest that consideration be given to using sale prices to value larger CIP properties that may be acquired on a speculative basis when the income approach significantly undervalues the property.

Background

Prior to the Supreme Judicial Court's (SJC's) 1974 decision in *Town of Sudbury v the Commissioner of Corporations and Taxation*, there were wide variations in local assessing practices. At issue in this case was the practice of some municipalities to assess properties at levels well below the statutory standard of full and fair cash value and the Commissioner's role in enforcing this standard. This practice, along with the lack of uniform data submitted by local assessors, resulted in serious flaws in the state's biennial calculation of the equalized property values used in many local aid formulas.

Communities that were assessing at full market value tended to have much higher equalized valuations than those assessing well below market value. This resulted "in discrimination against those cities and towns whose assessors act lawfully, in favor of those whose assessors engage in illegal practice of fractional valuation."

An earlier 1961 SJC decision in *Bettigole v the Assessors of Springfield* focused on the practice of assessing different types or classes of property within a community at different percentages of full valuation. The Constitution of the Commonwealth required taxation to be "proportional and reasonable" and prohibited "the imposition of taxes upon one class of persons or properties at a different rate from that which is applied to other classes." The SJC found that the city's explicit practice of assessing multi-family, commercial, industrial and personal property at rates substantially higher than single-family properties violated the constitutional mandate of proportional and reasonable assessments and the statutory requirement for full and fair cash values.

The SJC decision in the *Sudbury* case held that the Commissioner had both the power and the duty to direct assessors to maintain full and fair cash valuations. The effect of the *Sudbury* decision then in communities practicing disproportionate assessing of the type cited in *Bettigole* was a potential shift in the tax burden from commercial, industrial and personal property to residential properties.

In 1978, however, voters approved an amendment to the Massachusetts Constitution that averted a wholesale shift of the tax burden to residential properties. The amendment authorized the Legislature to classify real property

into as many as four classes and to tax these classes differently. In 1979, the General Court adopted legislation that provided for the use of differential rates, provided a community was certified as assessing property at full and fair cash value. Effectively then, this new law allowed communities to maintain the taxing practices found to be illegal in the *Bettigole* and *Sudbury* cases, albeit in a more transparent and above board manner.

The determination to implement differential tax rates is a local option that is made each year by the selectmen in a town or the mayor and city council in a city. After the Commissioner certifies that the municipality's values represent full and fair cash values and the property is classified according to use, local officials are permitted to determine the proportion of the tax burden to be borne by each class of property. The Commissioner of Revenue determines the allowable limits of this shift for each community on an annual basis.

Originally, the 1979 legislation provided for a minimum residential factor of 65 percent and limited the shift to the CIP class to 150 percent. These percentages refer to what each class would bear under a uniform, single tax rate. In other words, the maximum shift to CIP could be no more than 50 percent greater than the share that these classes would bear with a single tax rate. The residential class must also bear at least 65 percent of the levy it would otherwise bear with a single rate.

In July of 1988, the legislature expanded these limits for communities where the minimum residential factor resulted in the residential class bearing a greater share of the total tax levy than it did in the prior year. Alternatively, communities could qualify if the residential levy share increased to a level beyond the level in the year prior to the year the minimum residential factor was first adopted. These conditions were caused by the more rapid appreciation of residential properties relative to CIP properties during the late 1980's. Chapter 200 of the Acts of 1988 raised the maximum shift to the CIP class to 175 percent and changed the minimum residential factor to be not less than 50 percent.

Over the last few years, conditions in the real estate market have been such that residential properties are again appreciating at a greater rate than CIP properties. For communities at or near their maximum shift to the CIP class, these conditions would have resulted in an increase in the residential share of

the tax burden. To address this situation, the Legislature adopted Chapter 3 of the Acts of 2004 that temporarily increased the allowable CIP shift to 200 percent and reduced the minimum residential factor to 45 percent.

Analysis of Recent Market Conditions

Generally, communities with CIP values of at least 10 percent of total value are the ones that seriously consider shifting the tax burden. As shown in the Table 1 below, only 10 of the 148 communities with CIP values less than 10 percent shifted to the CIP class in FY04. The percentage of communities adopting a shift increases dramatically as the percentage of CIP value increases, with 76 percent of communities with CIP values greater than 30 percent electing to shift.

Table 1: CIP Value Shares and the Decision to Shift

% CIP Value	2004		Total #	Percent Communities Shifting
	CIP Shift	No Shift		
< 10%	10	138	148	6.76%
10% - 19.9%	45	81	126	35.71%
20% - 29.9%	29	23	52	55.77%
> 30%	19	6	25	76.00%
Total	103	248	351	

A review of statewide historical data on assessed value by class and the portion of the tax levy paid by each class offers useful perspective. As shown in Table 2 on the next page and Graph 2 that follows, CIP values as a percent of total property values declined from 25.86 percent in FY86 to 22.55 percent in FY90. However, the percentage share of the tax levy borne by the CIP classes changed very little during this period. Mathematically, the only way the CIP levy share could be stable, given the declining CIP values, was to increase the shift factor during this period. Table 2 demonstrates that this is indeed what happened, as the aggregate statewide shift to CIP increased from 130 percent to 148 percent in FY90. These market conditions provided the impetus for Chapter 200 of the

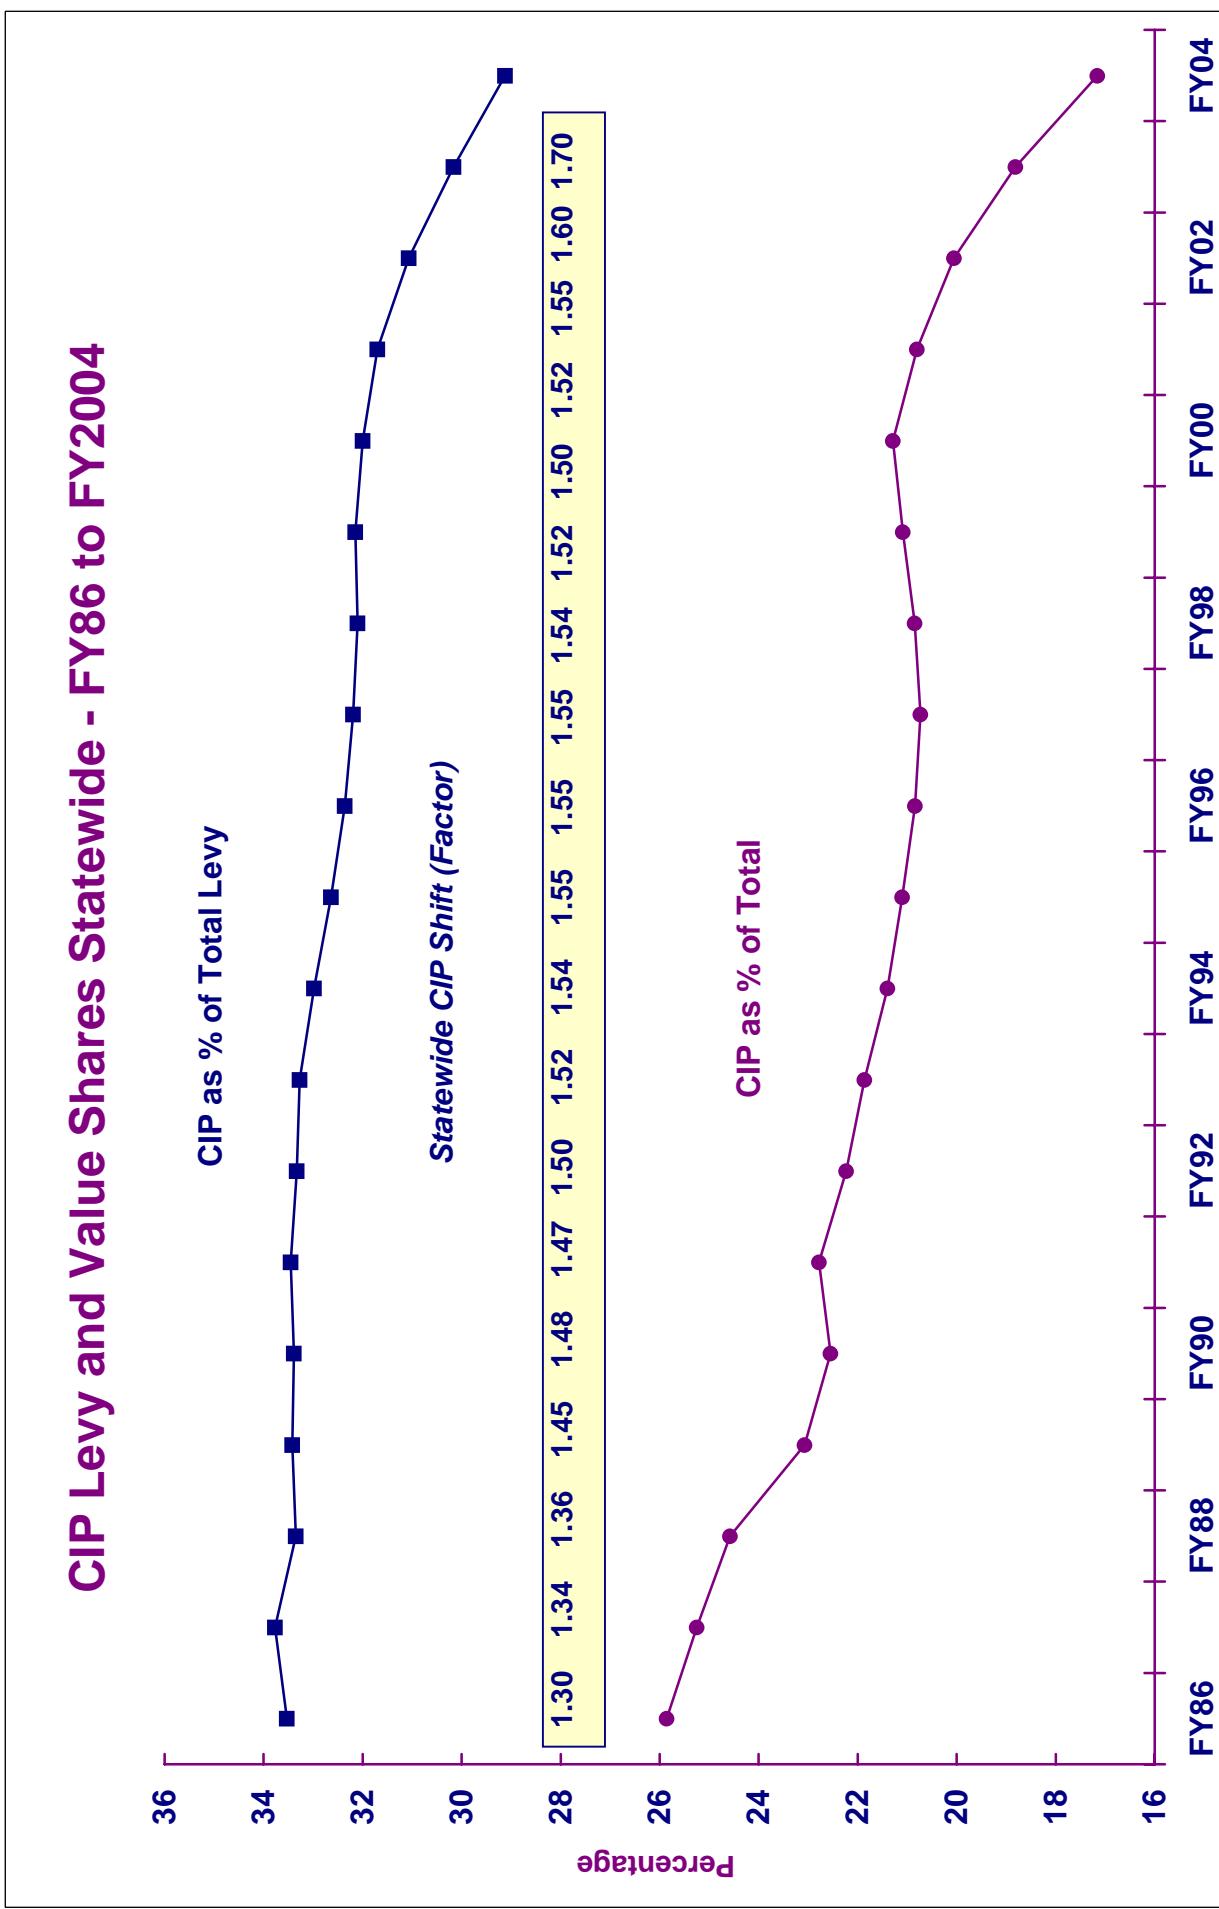

Acts of 1988, which increased the allowable CIP shift for qualifying communities to 175 percent.

Table 2: Statewide CIP Levy and Value Shares FY86 to FY04

Fiscal Year	CIP Share of Total Levy	CIP Share of Total Value	CIP Shift Factor
FY86	33.53	25.86	1.30
FY87	33.77	25.25	1.34
FY88	33.35	24.58	1.36
FY89	33.42	23.07	1.45
FY90	33.39	22.55	1.48
FY91	33.45	22.78	1.47
FY92	33.33	22.23	1.50
FY93	33.27	21.86	1.52
FY94	32.98	21.40	1.54
FY95	32.64	21.10	1.55
FY96	32.36	20.84	1.55
FY97	32.19	20.73	1.55
FY98	32.10	20.85	1.54
FY99	32.15	21.09	1.52
FY00	32.00	21.29	1.50
FY01	31.70	20.80	1.52
FY02	31.07	20.05	1.55
FY03	30.16	18.81	1.60
FY04	29.12	17.16	1.70

During the 1990s, CIP value shares remained fairly stable moving from 22.55 percent in FY90 to 21.09 percent in FY99. The portion of the levy borne by the CIP classes was also relatively stable moving from 33.39 percent in FY90 to 32.15 percent in FY99. The statewide shift percentage during this time ranged from a low of 147 percent to a high of 155 percent.

Beginning in FY01, the CIP value share again began to decrease. However, the tax impact on the residential class was again softened by a rapid increase in the

statewide shift factor from 152 percent in FY01 to 170 percent by FY04. Of course, the FY04 shift would not have been as great had Chapter 3 not been enacted.

The new limits authorized by Chapter 3 became effective in FY04 and 13 municipalities availed themselves of the new limits. Six communities went to the full 200 percent shift (Boston, Dedham, Fall River, Medford, Somerville and Wilmington). In other communities, the maximum shift was between 175 and 200 percent or the amount necessary to ensure that the residential share of the levy did not exceed the share in the prior year. Four additional communities went to their maximum allowable shift (Everett – 193%, Lynn – 195%, Saugus – 192% and Waltham – 194%). The final three shifted to an amount less than their maximum (Lexington – 180%, max 194%; Malden – 187%, max 200%; and New Bedford – 184%, max 187%).

Testimony on Tax Classification

The universal theme of the testimony from business organizations concerning property tax classification was that Chapter 3 allows for too much of the tax burden to be shifted to business. (See Table 3 below on tax dollars shifted over time and the percent shift). Most argued for a return to the 175 percent shift (or 170 percent if Chapter 3 was implemented), while some stated that classification should be eliminated or phased-out over several years. One respondent recommended that the state provide transitional state aid to wean communities off of classified tax rates.

We also heard that the decision to classify, particularly in poorer cities, is a difficult one that may affect a community's ability to compete for business development. Once a substantial shift is in place in these communities, it is very difficult politically to return to a more uniform tax rate. Several participants felt that municipalities that shift at or near the maximum are at a disadvantage in attracting and retaining business development when neighboring towns opt for a single tax rate. Testimony from the Chelsea, Fall River, Haverhill, MetroWest, New Bedford and Worcester Chambers of Commerce reiterated these concerns and the belief that there is no rationale for business to be paying so much of the property tax given the level of services received.

Table 3: Statewide Taxes and Percent Shifted to CIP Classes

Fiscal Year	Tax Dollars Shifted to CIP Classes	Aggregate Shift Percentage
FY92	\$485,144,665	150%
FY93	\$518,660,014	152%
FY94	\$542,190,162	154%
FY95	\$564,588,254	155%
FY96	\$584,382,557	155%
FY97	\$600,598,134	155%
FY98	\$618,887,144	154%
FY99	\$635,998,639	152%
FY00	\$655,896,683	150%
FY01	\$711,948,066	152%
FY02	\$760,772,320	155%
FY03	\$829,532,382	160%
FY04	\$939,722,517	170%

Interestingly, we also heard testimony from several municipal assessors that shifting the tax burden to business increases their expenses, thus reducing their net income. Other things being equal, using the income approach to value, a lower net income or return on investment ultimately lowers the assessed value of the property. This, in turn, exacerbates the problem of divergent property values among classes.

The Associated Industries of Massachusetts (AIM) notes that any attempt to fix this problem is suspect if it pits one group against another without regard to services received or the ad valorem nature of the property tax. Indeed, if the property tax system is to be revised to give certain segments of the taxpaying public permanent or temporary tax relief, then the question becomes: who will pay for it? For example, how much of the property tax burden should be borne by the CIP class versus the residential class to avoid abrupt changes? To what extent should residents with low income, elderly residents, and renters receive tax breaks? If any of these groups are to receive further tax exemptions, will the state or the municipality pay for this relief?

In many respects, these questions are subjective in nature and depend on one's point of view rather than any particular technical expertise. As an administrative

agency, we offer some suggestions as to how to mitigate abrupt shifts in the tax burden and provide tax relief to certain taxpayers, particularly the elderly.

Possible Remedies to Avoid Abrupt Shifts in the Tax Burden

The Legislature seeks an equitable and sustainable method to address the situation that occurred in FY04 when CIP and residential values diverged. Absent the increase in the allowable CIP shift contained in Chapter 3, a significant increase in residential property tax bills would have occurred in communities with classified tax rates approaching the maximum shift. Going forward, new Division of Local Services' (DLS) reporting requirements for interim year adjustments to value will likely provide some relief in this regard. However, the legislative remedies suggested below (numbers 2 - 4) may also mitigate abrupt shifts in the tax burden, though some of these options may be questionable on constitutional grounds.

In the paragraphs below, we present four options for mitigating abrupt shifts in the tax burden and offer our comments on the advantages and disadvantages of each.

1. Interim Year Adjustments to Value

Every third year the Division certifies that a community is at full and fair cash value and that assessments are equitable and consistent within and among all property classes. Beginning in FY05, however, DLS administrative regulations will require that communities submit reports detailing their annual efforts to keep assessments at full and fair cash value in non-certification years. This new reporting requirement will compel communities, that may have been lax in maintaining full market values in interim years, to achieve this statutory standard (See chart on page A-2 of the Appendix on residential adjustments by region).

For example, several communities (Dedham, Fall River, Malden, Medford and Wilmington) that availed themselves of the higher shift allowed by Chapter 3 were certified in FY04. In the two years prior to certification, these communities made little or no adjustment to residential values (See Table 4 below). For the FY04 revaluation, Fall River increased residential values by 43 percent, Malden by 68 percent and Medford by 51 percent. Had these increases been spread

more evenly over the three years, any tax increase to the residential class would have been more gradual. Though this will not stem an overall trend of divergence in values among property classes, it will spread the change in the tax burden over a three-year period rather than a one-year period.

Table 4: FY01 - FY04 Residential Revaluation and Interim Year Adjustment Percentages

Municipality	FY2001	FY2002	FY2003	FY2004
BOSTON	29.70%	6.35%	8.37%	24.86%
DEDHAM	24.33%	0.00%	0.00%	50.20%
EVERETT	0.00%	4.02%	63.83%	3.56%
FALL RIVER	3.80%	0.00%	0.00%	43.22%
LEXINGTON	9.93%	10.55%	8.40%	14.57%
LYNN	12.80%	23.72%	22.36%	19.37%
MALDEN	40.73%	0.00%	0.05%	67.61%
MEDFORD	35.28%	6.37%	0.00%	50.91%
NEW BEDFORD	3.93%	8.68%	15.66%	25.24%
SAUGUS	8.35%	15.87%	14.73%	13.88%
SOMERVILLE	22.92%	-0.11%	25.55%	18.17%
WALTHAM	13.59%	14.33%	15.82%	9.68%
WILMINGTON	28.31%	0.00%	0.00%	44.39%

The tax impact of performing interim year adjustments to property values is illustrated in the Tables 5 and 6 on the following pages. The numbers used in these tables are hypothetical, but reflect the average change in residential values of the 13 communities that implemented Chapter 3. As the numbers clearly show, when interim year adjustments are not performed and values are not adjusted until the revaluation year, the increase in the residential tax burden can be abrupt. In fact, without Chapter 3, the average residential tax bill would have increased from \$3,047 to \$3,746, an increase of \$699 or 22.9 percent. With Chapter 3, the increase was mitigated, rising from \$3,047 to \$3,512, an increase of \$465 or 15.3 percent.

Table 5

**Tax Impact of Classification without
Performing Interim Year Adjustments to Value**

Assumes:	Residential values increase 50 percent from FY01-FY04, (adjusted approximately 14.5 percent each year), CIP shift at maximum and CIP values remain flat. Levy increases each year by 2.5 percent. There are 20,000 residential parcels and 2,000 CIP parcels
-----------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

When interim year adjustments to residential values were performed, the tax shift to the residential class is more gradual. Although the two scenarios end with exactly the same tax burden in FY04, the interim year adjustments tend to eliminate abrupt shifts. The table showing the impact of interim year adjustments demonstrates that the increase to residential bills is mitigated, going from \$3,469 in FY03 to \$3,746 in FY04, an increase of \$277 or 8 percent without Chapter 3. With Chapter 3, the residential increase into FY04 was only \$89 or 2.5 percent above the \$3,469 average bill in FY03.

Our conclusion is that new DOR administrative reporting requirements regarding interim year adjustments will go a long way toward smoothing abrupt shifts in the tax burden. To a degree, the significant tax increases facing some of the FY04 revaluation communities were precipitated by their reluctance to maintain full and fair cash values in FY02 and FY03. While these administrative measures will spread residential tax increases more evenly, they will not be effective in stemming the overall movement of the tax burden to the residential class if values continue in the current divergent pattern.

2. Limits on Change in Levy Share

A possible legislative solution to further smooth abrupt shifts in the tax burden is to implement a limit on year-to-year changes in residential levy shares. For example, Boston's residential levy share would have increased dramatically from 31.9 percent in FY03 to 42.2 percent in FY04 without Chapter 3. If a 10 percent limit on the change in residential levy share had been in place in FY04, Boston's residential share of the levy would have been allowed to increase only to 35.1 percent. Of course, restricting the annual increase in the residential tax burden necessitates an increase in the CIP shift factor to about 196.5 percent.

Undoubtedly, this option would put some CIP shares temporarily above the ceiling, but those above the maximum shift ceiling could be required to phase in the shift in the tax burden until at or below the limit. The benefit of this option is that it retains local tax policy flexibility by retaining the current classification framework and local discretion regarding the shift percentages. The downside is that shift percentages may be forced temporarily above the ceiling if divergent values persist.

3. Separate Levy Limits for Each Class

A second legislative approach, and one suggested during our hearings, is to calculate a separate levy limit for the residential and open space classes and another limit for the CIP classes. Dividing the current levy limit based on the most recently approved levy shares for each class would accomplish this. Going forward, the limit for each class would increase by 2.5 percent plus new growth in each class. Clearly, this approach provides stability in that it prevents abrupt shifts in the levy shares among property classes. The problem with this approach is that it locks in a particular tax shift or levy share for each class and virtually eliminates any local discretion to implement or change the CIP shift from year to year.

Another potential problem arises when a community faces substantial losses in value in the CIP classes. If a community were to lose one or more major CIP taxpayers, then the remaining businesses will be required to pick up the tax burden they had formerly paid. At some point, the situation becomes unworkable for the remaining businesses and requires that the residential class share this burden.

4. Limits on Annual Assessment Increases

A third legislative possibility, and an option used by several other states, involves limits on the annual increase in individual property valuations. For example, assessments in Florida can increase only by the lesser of the rate of inflation as measured by the Consumer Price Index or 3 percent above the prior year's assessment. When a property changes ownership, the assessed value is increased to market value, which serves as the new base moving forward. California and New York have limitations that operate in a similar manner.

Obviously, limits of this sort will eliminate substantial changes in the tax burden among property classes. However, they also create a contrived valuation system that will eventually bear little resemblance to the actual market valuation. Therefore, we believe strongly that limits on valuation change are a step in the wrong direction from the fair and transparent assessment standards that we have worked so hard to implement in Massachusetts.

A system limiting valuation increases may also be suspect in light of the Constitutional requirement for “proportional assessments.” For example, based on recent increases in residential property values in Massachusetts, some residential properties would be assessed well below market value with a 3 percent cap. Others will be assessed at or near market value if they have changed hands or appreciated at a slower rate. Under these conditions, it is difficult to assert that assessments within the residential class are proportional.

Temporary Tax Relief

Chapter 3 also requires that the DOR examine ways to provide “temporary tax relief” to residential taxpayers unable to pay tax increases resulting from shifts in the tax burden among property classes. The legislature suggests methods to provide this tax relief including increasing the residential exemption for people of limited means, allowing abatements to elderly and others who can prove that they do not have the financial resources to pay the tax increases, increasing the income tax deduction for renters, extending the period for paying property taxes and any other method for providing targeted tax relief. In the section that follows, we discuss and offer guidance on these and other possible avenues of targeted tax relief.

1. Residential exemption

The current residential exemption law (Ch 59, §5C) provides up to a 20 percent exemption to the principal residence of a taxpayer. Boston, Cambridge and Somerville may select a residential exemption percentage up to 30 percent. The exemption is calculated by applying the adopted percentage to the average value of all properties in the residential class. This exemption is granted only to the taxpayers’ principal residence and does not affect the total tax burden paid by the residential class. Rather, it shifts the burden within the residential class from domiciled to non-domiciled taxpayers (apartments, investment property and second homes). Some domiciles with high values may also pay more as the residential tax rate is higher than it would have been without the residential exemption. Eleven communities in the state currently use the residential exemption and they tend to be communities with a large number of apartment

buildings (e.g., Boston, Brookline and Chelsea) or second homes (Tisbury and Nantucket).

The residential exemption could be modified such that low-income residents received a larger percentage exemption than residents with higher incomes. As they do now, local assessors would serve as the gatekeeper for these exemptions determining principal residence and reviewing tax return data to determine eligibility. However, granting higher exemptions to low-income residents will further shift the tax burden within the residential class to higher income residents and non-domiciled taxpayers. The problem with shifting more of the residential burden to non-domiciled taxpayers is that those living in rental housing are likely to have lower incomes than those that qualify to purchase homes.

Since few communities have elected to adopt the residential exemption, we believe that prospects for providing additional relief to low income homeowners through this mechanism are limited. We think that the recently approved property tax deferral for hardship cases provides a viable alternative to non-senior taxpayers that experience temporary hardship. For senior taxpayers, we propose local option provisions to increase elderly exemptions with updated eligibility criteria to provide greater property tax relief to more seniors.

2. Elderly tax deferral

Qualifying taxpayers over 65 years of age may elect to defer payment of their property taxes (MGL Chapter 59, §5, cl 41A). These taxpayers may defer their annual property taxes until the property is either sold or transferred, or upon the demise of the taxpayer. Heirs have the first priority to the property by paying the full amount of the deferred taxes plus interest. Interest is charged at the rate of eight percent a year and increases to sixteen percent after the taxpayer dies. The total amount of the deferral, including interest, may not exceed fifty percent of the owner's proportional share of full and fair cash value.

To qualify, a taxpayer must have been domiciled in the Commonwealth for the preceding ten years, and must have owned and occupied this, or another, property as his domicile for five years. The taxpayer, including the spouse if

married, must have gross receipts not greater than \$20,000 (or up to \$40,000 at local option). When a taxpayer enters into a deferral agreement, the local assessors perfect a lien on the property with the registry of deeds to secure the municipality's interests.

Statewide this option is not widely used and provided only about \$3.5 million in total tax relief in FY04. During our hearings, many local assessors testified that the elderly are reluctant to enter into a deferral agreement because they don't want a lien on their property. Many elderly wish to pass their property on to their children and don't want to burden their children with the deferred taxes. Finally, some felt that the interest rate of 8 percent was too high given current market interest rates.

We believe that the property tax deferral program has much untapped potential that could be realized with some modifications. First, one option is to increase the income thresholds to the levels allowed in the state property tax credit for elderly (known as the "circuit breaker"). In the 2003 tax year, these limits were \$43,000 for a single taxpayer and \$64,000 for taxpayers filing jointly. These limits are then adjusted annually based on increases in the cost of living. We also believe the restrictions on the duration of Massachusetts residency should be eased at local option so that more deserving elderly can qualify.

These changes could be implemented as local option provisions by allowing communities to establish higher income criteria (either the circuit breaker limits suggested above adjusted annually for inflation or any other locally established criteria in excess of current limits), lower residency requirements and lower interest rates charged on the deferred taxes.

3. Hardship Tax Deferral

Recently approved legislation creates a new property tax deferral program specifically for hardship cases (MGL Ch. 59 §5(18A)). This deferral can be granted to any age taxpayer provided they have been domiciled in Massachusetts for the preceding ten years. Applicants are eligible for the hardship deferral if they can demonstrate a financial hardship due to a change to

active military status, unemployment, illness or other reason determined by the assessors.

Unlike the elderly deferral, the hardship deferral can be granted for a maximum period of three consecutive years. At the end of that period, the deferred taxes must be paid. The taxpayer may pay the deferred taxes, plus interest, in annual installments over a five-year period. The first payment is due two years after the last year of the deferral.

The hardship property tax deferral has the potential to assist younger taxpayers through temporary financial hardship. However, extending eligibility to younger taxpayers may be of limited effectiveness since many have substantial mortgages and current law requires the mortgage holder to agree to any deferral agreement. Mortgage holders may be unlikely to do this for taxpayers that are heavily mortgaged, as it sets up competing liens on the property. Another issue is the requirement that the taxpayer be domiciled in Massachusetts for the previous ten consecutive years. Deserving taxpayers with only eight consecutive years in Massachusetts or lifelong residents that have lived out of state for a year or two will have to be turned away under current law.

Since this deferral is so new that it has no track record, we recommend that the eligibility criteria be reexamined in a couple of years to determine if they are too restrictive.

4. Elderly exemptions

A tax exemption is a discharge from the obligation to pay all or a portion of a tax. Clauses 41, 41B and 41C of MGL Ch 59, §5, provide exemptions to persons age 70 or older who satisfy certain whole estate or asset, annual income and residency requirements. Clause 41 was an early Legislative response to the need of this category of persons for assistance with their tax obligations. As property values and income levels rose, it became more difficult for taxpayers to qualify. Consequently, the Legislature adopted alternative local option exemptions in Clauses 41B and 41C with less restrictive eligibility criteria.

Most communities now elect to provide elderly exemptions based on clause 41C. Clause 41C provides exemptions of \$500 for qualifying elderly aged 70 or older, with gross receipts (excludes social security or government pension) less than \$15,000 if married and a whole estate (domicile generally not included) of less than \$30,000. Baseline Clause 41 and local option 41B provide the same \$500 exemption, but with lower gross receipt and whole estate thresholds. Clause 41D was added in 2000 and allows for an annual inflationary adjustment to the income and whole estate criteria. By FY04, 301 of 351 or 86 percent of all communities had adopted 41C.

Another local option, effective in FY03 (Chapter 184 §51 of the Acts of 2002 amending clause 41C), allows communities to double the elderly exemption to \$1,000, lower the age criteria to 65 and increase the means test if married to gross receipts of \$30,000 and a whole estate of \$55,000. If a community opts to increase eligibility for these exemptions, it is generally a local expense. This is the case because state law caps the reimbursement based on the number of exemptions granted in the last year the community operated under the most restrictive Clause 41. Further relaxing local option eligibility criteria will provide more tax relief, but without state reimbursement the cost is borne locally.

The number of elderly qualifying for elderly exemptions has declined steadily statewide in recent years dropping from 33,203 in FY92 to 20,359 in FY03, a decrease of 39 percent. At the same time, according to United States Census Bureau data, the number of elderly age 65 and older has increased by 5 percent from 1990 to 2000. The number aged 75 and older, however, has increased by 20 percent. The number living in poverty has been relatively constant over this period. State reimbursement for all elderly exemptions granted via all the various clause 41 exemptions totaled about \$9.6 million in FY04.

We propose that communities be given more flexibility in determining both the amount of the exemption and the eligibility criteria so that more tax relief can be provided to deserving elderly at local option. As people live longer and the elderly population increases, municipalities have granted many fewer property tax exemptions for the elderly. Undoubtedly, this reflects the fact that the clause 41C eligibility criteria have not been updated for inflation since initially adopted in 1986. Inflation during the period from 1986 to the present was 86 percent as measured by the United States Department of Labor, Bureau of Labor Statistics

Consumer Price Index for Urban Consumers-Boston. This is the same inflation index applied by DOR to adjust the gross receipts and whole estate thresholds in communities adopting clause 41D.

Increasing the original clause 41C gross receipt and whole estate criteria by the 86 percent inflation rate since 1986 yields about the same result as the local option 2002 amendments to 41C (See Table 7 below).

Table 7

Eligibility Criteria for Clause 41C Elderly Exemptions

	Gross Receipts	Whole Estate
Single taxpayer		
Original Clause 41C	13,000	28,000
2002 Local option 41C	20,000	40,000
Orig. 41C increased 86%	24,180	52,080
Married taxpayers		
Original Clause 41C	15,000	30,000
2002 Local option 41C	30,000	55,000
Orig. 41C increased 86%	27,900	55,800

Therefore, this option appears to be viable alternative to communities wishing to grant more senior tax relief.

To date, about 115 communities have adopted one or more of the options allowed by the 2002 amendment. Most have experienced significant increases in the number of elderly qualifying for exemptions. Communities adopting these options tend to have above average per capita income and relatively high average tax bills.

The amount of the exemption also needs to be increased to keep pace with the growth in the average single-family tax bill. For example, the \$500 exemption covered about 48 percent of the average tax bill in FY82 (the earliest year we have this data for). Given that the average tax bill has increased from just over \$1,000 in FY82 to \$2,894 in FY04, providing equivalent relief requires that the

exemption be raised to approximately \$1,400. Other options could be added to increase the exemption amount to the \$1,400 figure or even higher if a community desired.

5. Income tax deduction for renters

The income tax deduction for renters was enacted as part of Proposition 2 ½ and was intended to ensure that renters shared in the tax savings the accrued to property owners with the passage of Proposition 2 ½. Today, divergent property values by class and the use of the residential exemption have increased the tax burden on apartments and other rental units. As explained earlier, divergent values cause all residential properties to pay more. In contrast, however, the residential exemption shifts the burden within the residential class to rental properties, second-homes and high value properties. Any tax increase on rental property is undoubtedly passed along to the renters in the form of higher rents.

The state income tax deduction for renters was last increased in 2001 when it was increased from a \$2,500 maximum deduction to a \$3,000 maximum deduction. In 2003, the \$3,000 maximum rental deduction, given the 5.3 percent state income tax rate, resulted in a reduced state income tax of \$159.

According to United States Census Bureau data from the 2000 Census, the number of owner occupied housing units in Massachusetts exceeds the number of renter occupied housing units (1,508,248 and 935,332, respectively). However, the number of occupants below the poverty level living in rental units (186,552) far exceeds the number in owner occupied housing (54,345). Therefore, renters as a group are more likely to be below the poverty level and in need of relief from property tax increases passed on through higher rents.

To the extent that the tax burden on renters is increased by local adoption of the residential exemption, we are troubled by the notion of amending state tax code to mitigate the impact of local option tax policy. However, it seems clear that the people most negatively affected by tax shifts to the residential class, and specifically to apartment buildings, are renters of all ages.

An alternative to address some of the negative tax impacts on renters is to eliminate the residential exemption altogether. However, eliminating this exemption will be very unpopular politically in communities that depend on this exemption to lower the tax bills of homeowners.

6. Extending tax payment period

Extending the payment due dates for property taxes could be a benefit to taxpayers, but it comes at a cost to municipalities. The property tax is the single largest source of municipal revenue and constitutes about 53 percent of all municipal revenues. Therefore, delaying the receipt of this local revenue will create cash flow problems and increase municipal borrowing needs. Merely delaying the obligation without lowering it provides little true benefit to the taxpayer. For these reasons, we do not recommend this option as a viable method of tax relief. If a hardship exists for a particular taxpayer, a better option is to pursue the newly established hardship deferral.

It is also possible to lower the interest charge on delinquent tax payments below the current 14 percent or 16 percent once the property is in tax title, but this too would constitute a revenue decrease for municipalities.

7. Hardship exemptions

Chapter 59, §5, cl 18 provides for exemptions up to the total value of a property of a person who by reason of “age, infirmity and poverty” is unable to contribute fully to the public charges. This exemption is not widely used (only 539 were granted statewide with \$598,749 in total taxes abated in FY04), as local assessors seem reluctant to be the arbiters of this rather nebulous standard.

8. Senior “Circuit Breaker” State Tax Credit

This state tax credit provides relief to elderly taxpayers (65 and over) with total income less than \$64,000 (married, filing jointly) and a domicile assessed at less than \$432,000. The tax credit is equal to the amount by which property taxes

and half of water and sewer charges exceed 10 percent of total income, up to a maximum credit of \$810. This credit also works for renters as 25 percent of their rent is considered to be property tax.

There are currently no whole estate or asset criteria that restrict eligibility for this credit. Elderly who own second homes can still qualify for this tax relief if they meet the relatively generous income criteria. We believe that a whole estate or asset threshold should be added to this exemption to prevent seniors that own second homes from qualifying for this exemption.

9. Small Business Tax Relief

During our hearings we heard some testimony regarding the need for tax relief for small commercial businesses. Currently, there is a small commercial exemption allowed under MGL Ch. 59, §5I. This is a local option that was enacted in 1993 and has been implemented in only five communities (Avon, Bellingham, Braintree, Somerset and Westford). To qualify, a commercial parcel must be occupied by a business with no more than 10 employees at all locations as certified by the Department of Employment and Training and have a valuation of less than one million dollars. The exemption can be up to 10 percent of the value of the qualifying parcel.

The problem with this exemption is that often the property owner leases space to the small business owner. Consequently, the tax relief accrues to the property owner and may not be passed on to the business operator. Establishing a separate small business class would be problematic for the same reason, the tax relief would be to the property owner and not to the small business itself. Another option is to provide a state tax exemption or credit directly to small business. However, small businesses in most need of this relief are those located in communities that shift the maximum amount to the CIP classes. Consequently, providing a state tax incentive to mitigate the impact of local tax policy is questionable.

Other Issues Related to Classification

Aside from the issues about relative tax burden among property classes discussed above, we heard testimony about some other important issues that merit consideration. The most significant of these were questions raised about the manner in which commercial and industrial values are rendered.

Determining Commercial and Industrial Valuations

During our hearings, we heard testimony that, in some cases, the income approach to valuing commercial and industrial properties understated value in relation to sale prices. Often, a sale price for a large commercial property will be influenced by many complex factors such as speculative interest in the property, considerations reflected in the sale price such as the purchase of a company name or business, the financing terms of the sale and other issues involving the transaction that never become public. While CIP sales provide some useful guidance to assessors, due to the unique nature of many large CIP properties, there are often few sales of similar properties. Therefore, a local assessor that relies on sales of large commercial properties as the sole indicator of value runs the risk of over valuing these properties and losing expensive abatement cases before the Appellate Tax Board (ATB).

Assessors typically analyze three approaches to value when determining Commercial/Industrial values. Although the sales and cost approaches should be reviewed as a check, the income approach is generally thought to be the most reliable and consistent appraisal method. This approach relies on the analysis of income and expense data from the business to determine value. Essentially, then, this approach focuses on income or the return on investment produced from the property. For these reasons, the income approach is the predominant appraisal method relied on by the ATB when hearing taxpayer appeals regarding assessed values.

In order to determine values using the income approach, local assessors must solicit information from businesses regarding their income and expenses (I/E). The extent of the information supplied and the rate of response vary across the

state. Many assessors struggle with a poor response rate and believe that there are not adequate sanctions in place to require businesses to comply.

We agree that the submission of income and expense data can be a potential weak link in the appraisal of CIP property. To address this, the Division plans to work with the Massachusetts Association of Assessing Officers (MAAO) to develop a standardized I/E form that can be used statewide. Currently, important information such as the start date, duration and expiration date of a lease agreement may not be collected. A cover letter sent with the forms should clearly explain the use of the data, the importance of reliable information, the legal sanctions for failure to comply and the procedures intended to ensure confidentiality of the information submitted.

Local assessors should also begin soliciting this information on an annual basis. If business owners see these forms more frequently, and see evidence that confidentiality is honored, they may be more comfortable with the process and more disposed to respond. Annual requests for this data will also be necessary to make a determination as to the need for interim adjustments to value.

Sanctions for businesses that do not comply with requests to submit I/E data also have proven to be somewhat ineffective. Two sections of state law address the issue of taxpayer compliance with assessors' requests for data. The first, MGL Ch 59, §38D, deals with assessors' requests for data prior to rendering values. The intent is to bar the taxpayer from appealing his valuation to the ATB if the requested data is not submitted, unless he was unable to comply for reasons beyond his control. The section also provides for a fifty-dollar fine to be added to the next year's tax bill.

The second, MGL Ch 59, §61A, refers to data requests made by assessors after an abatement application has been filed. Failure to comply bars the taxpayer from any statutory appeal before the ATB, unless the taxpayer's failure was for reasons beyond his control or unless he attempted to comply in good faith. Historically, it seems that the ATB has been reluctant to foreclose a taxpayer's right to appeal under §38D and will generally accept the I/E data after the fact rather than dismiss the case. The ATB has, however, been more likely to dismiss a case of a taxpayer who fails to submit information pursuant to MGL Ch

59, §61A, provided the assessors follow careful procedures in preparing a motion to dismiss the case.

We recommend that the Legislature strengthen the sanctions provided in MGL Ch 59, §38D to encourage more widespread compliance with local assessors' requests for income and expense data. For example, the fifty-dollar fine could be increased so that it is a percentage of the prior year tax bill to encourage larger businesses to pay attention to this section. The assessors' ability to render property values fairly across all property classes depends on more vigorous pursuit of data and more dependable sanctions for non-compliance.

We also suggest that, in some cases, consideration be given to using the sale price of a particular property to determine its assessed valuation. Often a significant CIP property sells for a price far greater than that supported by the income appraisal approach. The sale price may reflect speculative interest in the property and be more closely aligned with its true value.

Other Relevant Information

Chapter 3 stipulates that DOR prepare extensive data on the tax levies, levy shares and tax rates by class for all cities and towns. It also requires that DOR provide data on all property tax relief programs offered at the local level. We have included detailed discussions of each of the various means to provide property tax relief and the standards for participation in the body of the report. Detailed statistics by city and town are included in the Appendix that show the number and dollar amount of relief provided through various programs. These programs include exemptions for the elderly, surviving spouses, blind, veterans and hardship cases.

We also disseminate data on all payments in lieu of taxes. The data regarding in lieu of tax payments comes from our earlier report to the Legislature in December of 2003 entitled "A Study of Charitable and Educational Property Tax Exemptions." In this report we provide the estimated assessed value of all non-profit, charitable and educational institutions. The report contains the valuation data for these properties, as well as the dollar amount of payments in lieu of taxes and the projected tax revenue to be generated if these properties were

taxable. Data on government and religious exemptions was not collected or included in these results.

We provide additional data on urban redevelopment excise (MGL Ch 121A) as collected by the DOR and paid over to cities and towns. These excise payments are essentially in lieu of property tax payments for certain eligible properties. Typically, these agreements last for fifteen years, but can be extended to no more than forty years. Payments are made to the state and then passed on to the community the property is located in. The payments are based on five percent of the gross income for all sources in the preceding calendar year plus an amount equal to ten dollars per thousand multiplied by the fair cash value of the property. The data are presented by community and project along with the total payments collected by project. The few negative payments in the data refer to projects that have come out of 121A status and have overpaid their excise to the state.

We also collected information from municipalities regarding their most persistent delinquent property taxes by class, those in tax title status. We also asked communities to submit data on property owners over age 65 that had delinquent accounts of this nature. While many communities were not able to submit this data, the data that we were able to collect showed some trends. Generally, for the residential properties in tax title, owners were most likely to be under age 65. In fact, younger delinquents outnumbered those over age 65 by a five to one ratio, versus general population figures that show persons age 25 to 64 outnumber those 65 and over by a four to one ratio.

We found that delinquent accounts were concentrated primarily in the residential class, as there were about twelve times as many delinquent accounts in the residential class compared to the commercial and industrial classes combined. Of course, the dollar amounts owed tended to be larger in the commercial and industrial classes.

Finally, we met with representatives from the Massachusetts Association of Councils on Aging and Senior Center Directors to discuss how to improve the tax relief available to qualifying seniors and how to better market these programs to eligible seniors. We discussed the recommendations made in this report as they relate to senior tax relief and talked about developing an educational video that

could be used by local Councils on Aging to counsel seniors on the avenues available to them if they are struggling to pay their property taxes.

Wilmington	174	200	200	\$2,982	\$3,108	4.23%

Note: Tax bill data for Boston, Somerville and Waltham was provided by the community. Because they grant a residential exemption, DLS does not collect the information necessary to calculate an average tax bill.

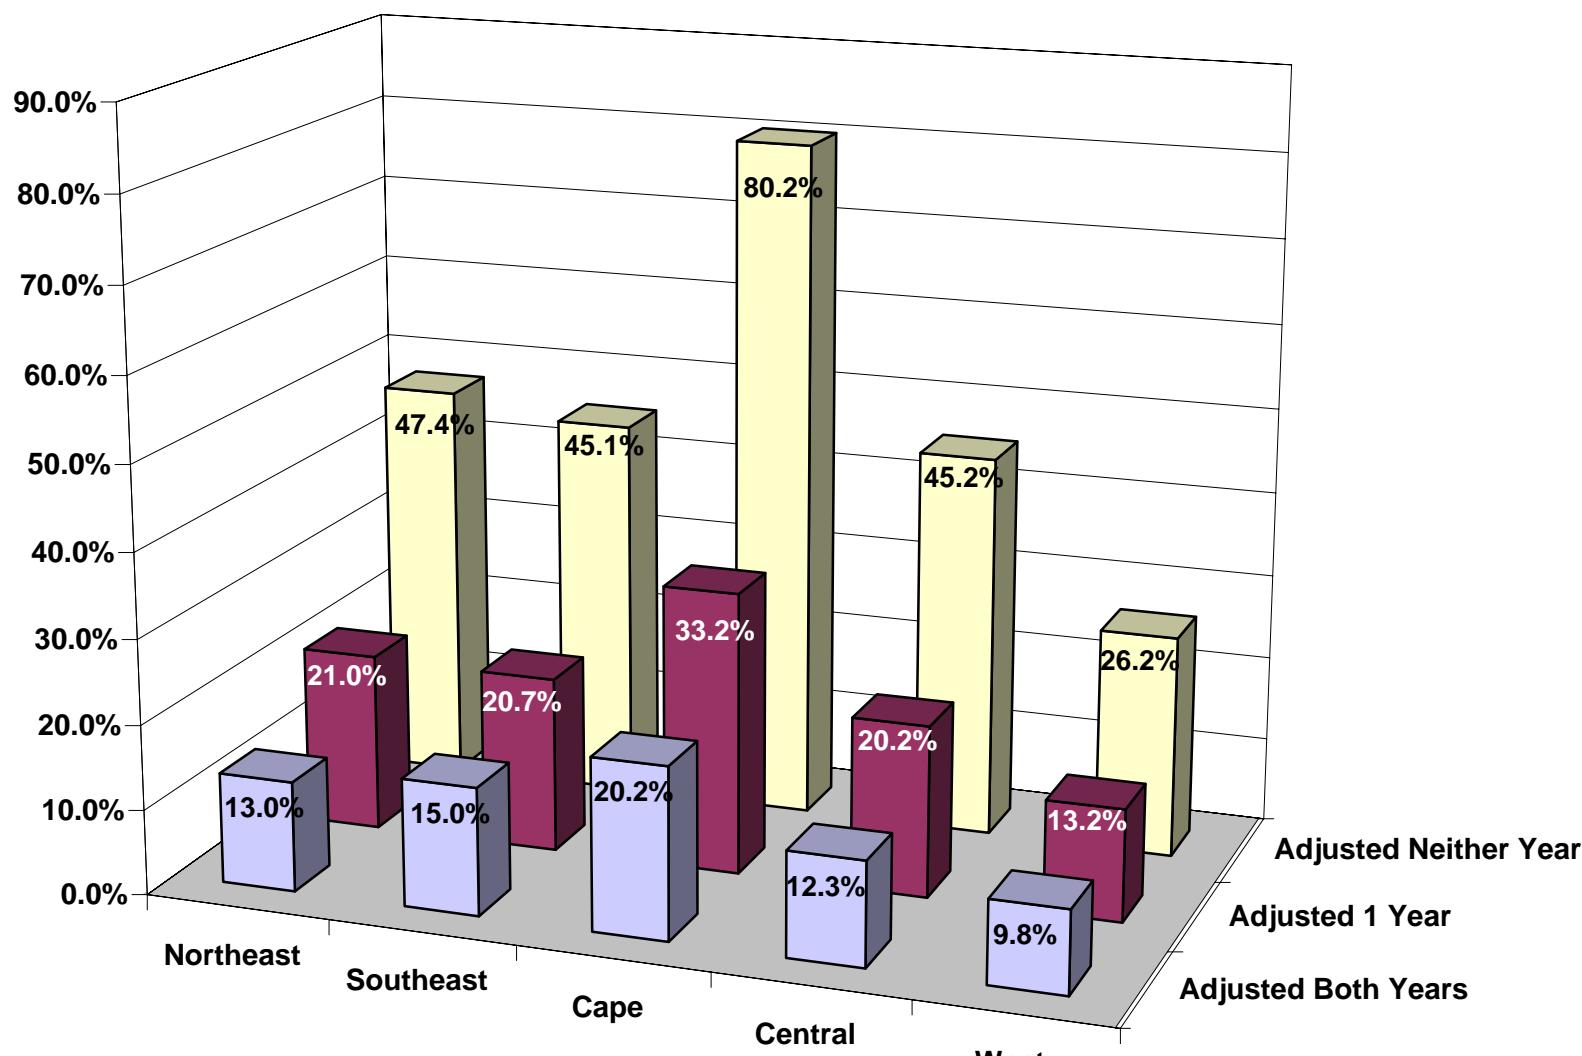

FY 2004 Average Residential Adjustments

Region	No Adjustments in FY02 or FY03		Adjusted 1 Year FY02 or FY03		Adjusted Both Years FY02 and FY03	
	#	Avg % Adj	#	Avg % Adj	#	Avg % Adj
Northeast	8	47.4%	14	21.0%	50	13.0%
Southeast	14	45.1%	8	20.7%	27	15.0%
Cape	3	80.2%	2	33.2%	11	20.2%
Central	14	45.2%	12	20.2%	17	12.3%
West	29	26.2%	15	13.2%	9	9.8%
Total	68	38.9%	51	19.0%	114	13.8%

Note: This data includes 136 Certification communities and 97 Non-certification communities.

117 Non-certification communities made no adjustments in FY2004 and are not included in the statistics above.
One community had not submitted data for the FY2004 tax rate as of 6/18/2004.
