Introduction

The Ipswich River Watershed water quality survey was conducted in 2005, as part of the Division of Watershed Management (DWM) monitoring. Consistent with the DWM's general approach to watershed monitoring to meet defined programmatic objectives, water quality surveys were conducted during the months of May, June, July, August, and September. This technical memorandum is designed to present final DWM-generated water quality monitoring data for use in watershed assessment reports and for reporting data to outside groups.

Project Objectives

The goals of the DWM 2005 Ipswich River Watershed monitoring were to gather biological, physical and chemical data to assess designated uses, evaluate the impacts of National Pollution Discharge Elimination System (NPDES) discharges and non-point pollution on aquatic health, and to provide quality-assured data for pollution abatement programs. The specific objectives of the 2005 Ipswich Watershed monitoring were to:

- Provide biological, habitat, and dissolved oxygen, temperature, and chemical data to be used in making *Aquatic Life* and *Aesthetics* use assessments required by Section 305(b) of the Clean Water Act and provide data for other informational needs of Massachusetts regulatory agencies.
- Provide quality-assured fecal coliform and *E. coli* bacteria data for the purpose of assessing the *Primary* and *Secondary Contact Recreation* uses.
- Screen fish to provide data to the Massachusetts Department of Public Health (MDPH) for public health risk assessment due to fish tissue contaminants (metals, polychlorinated biphenyls (PCBs) and pesticides). The results of 2005 fish toxics monitoring are detailed in a separate technical memorandum (Maietta et. al 2009).
- Collect benthic macroinvertebrate data to assess the *Aquatic Life Use*. The results of the 2005 benthic macroinvertebrate monitoring are detailed in a separate technical memorandum (Johnson and Fiorentino 2011).
- Conduct fish population monitoring to assess the *Aquatic Life Use* and determine the presence, if any, of cold-water fisheries within sampled streams. The results of the 2005 fish population monitoring are detailed in a separate technical memorandum (Maietta 2006).
- Gather stream temperature data to determine whether a cold-water fishery exists in segments sampled.

Sampling Plan

Information pertaining to station location, rationale, and objectives is available in the *Sampling Plan for Year 2005: Surface Water Monitoring in the Ipswich River Watershed* (CN 220.2, MassDEP 2005a). For a description of the DWM's general approach to watershed monitoring, see the *MADEP, DWM QAPP for Surface Water Monitoring and Assessment, 2005-2009* (MassDEP 2005b). Table 1 and Figure 1 provide details and locations of the 2005 sampling sites.

Samples for total phosphorus, total nitrogen, ammonia-nitrogen, total suspended solids, color, turbidity, bacteria counts (fecal coliform and *E. coli*), dissolved oxygen and other field measurements were obtained from a total of six stations. Bacteria counts only (fecal coliform and *E. coli*) were collected at five stations while dissolved oxygen and other field measurements and bacteria counts (fecal coliform and *E. coli*) were obtained from three stations. Water quality surveys (grab samples and in-situ measurements) were conducted on the following dates: May 24th, June 21st, July 27th, August 24th and September 27th. Additionally, continuous temperature and dissolved oxygen monitoring with unattended metered probes were carried out for a minimum duration of 24 hours at nine sites. Continuous temperature monitoring was conducted at three sites to determine whether water quality meets the coldwater criterion.

Table 1. Sampling sites, descriptions, parameters frequency for Ipswich River Watershed monitoring

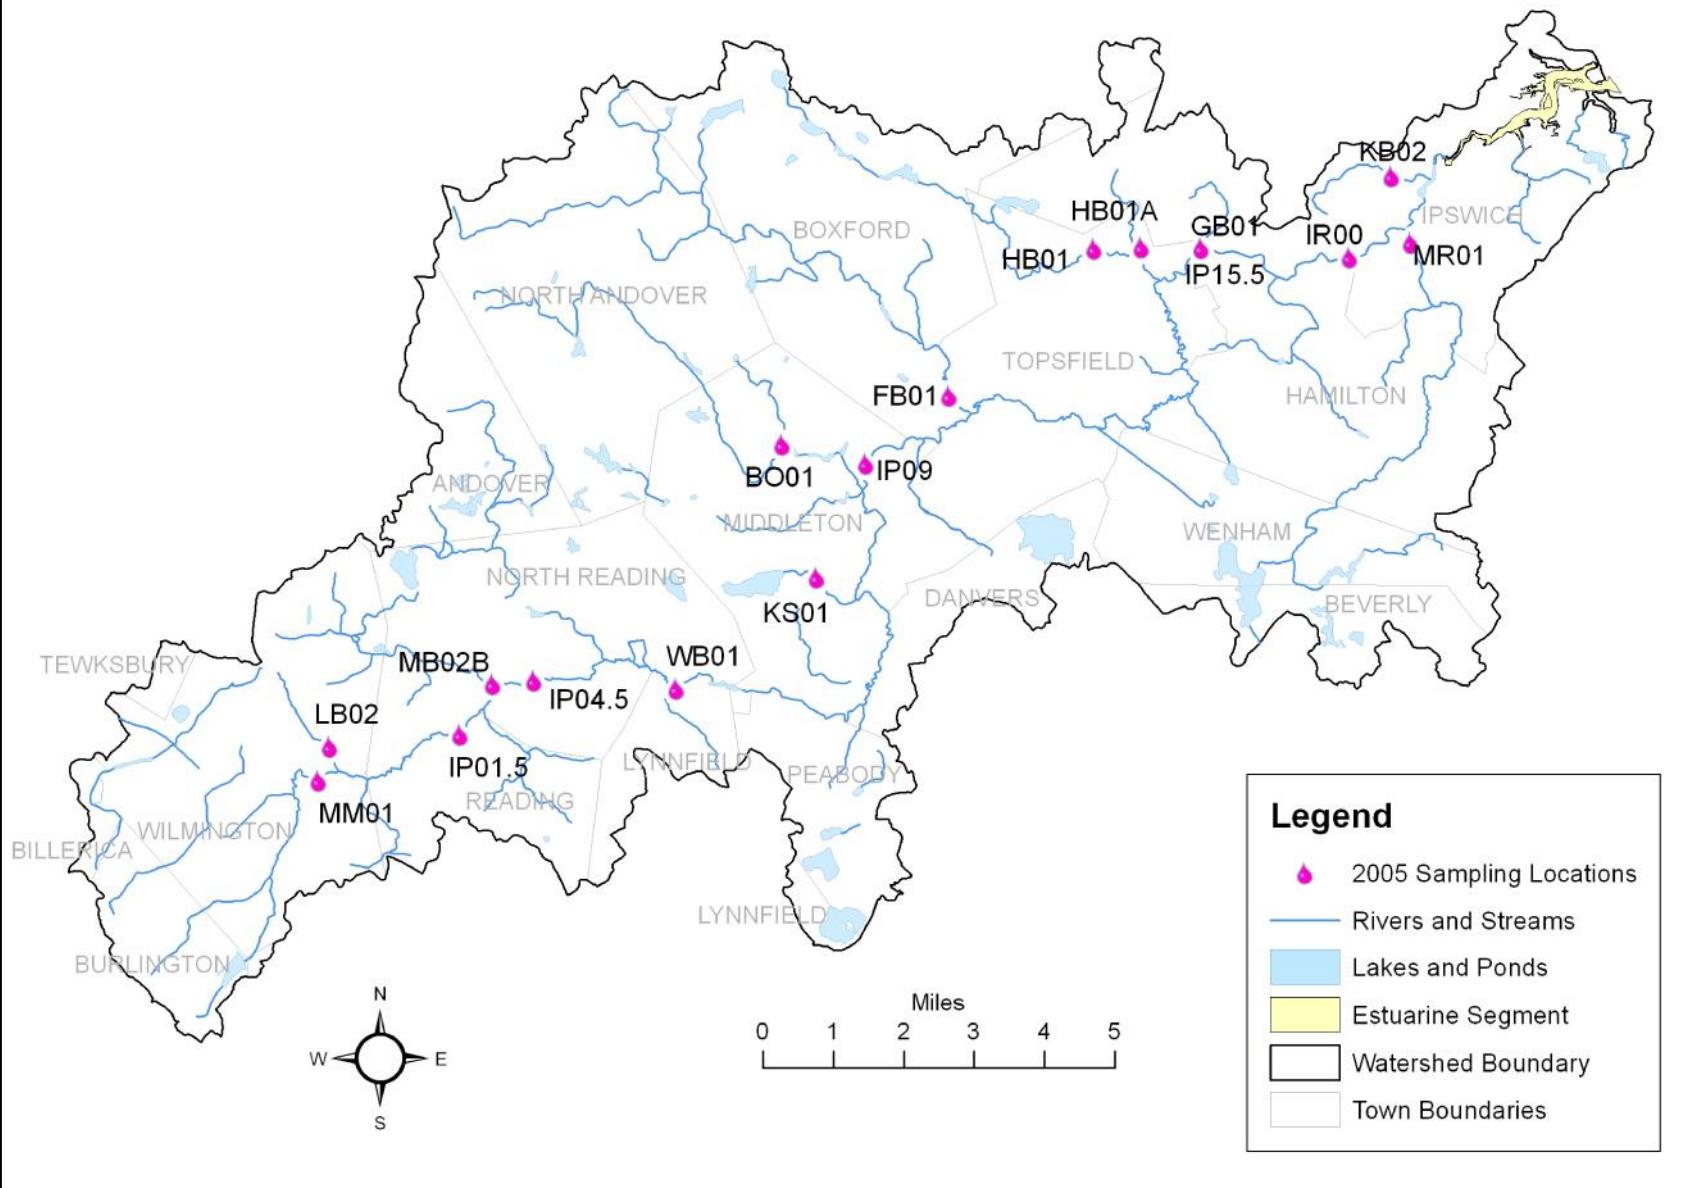

Sampling Site Name	Unique ID# (Station ID)	Site Description	Parameters	Frequency
River/Stream Water Quality Surveys				
Maple Meadow Brook	W0143 (MM01)	Federal Street, Wilmington	Color, turbidity, TP, NH ₃ -N, fecal coliform and <i>E. coli</i> bacteria Attended ,multi-probe (DO; % saturation ; temperature; pH; depth; specific conductivity), unattended multi-probe	Single grab samples and Multi-probe for a total of 5 surveys
Lubbers Brook	W0139 (LB02)	Concord Street, Wilmington	Color, turbidity, TP, NH ₃ -N, fecal coliform and <i>E. coli</i> bacteria Attended multi-probe (DO; % saturation ; temperature; pH; depth; specific conductivity), unattended multi-probe	Single grab samples and attended multi-probe for a total of 5 surveys, 5 unattended deployments
Ipswich River	W0113 (IP01.5)	Mill Street, Reading/North Reading	Color, turbidity, hardness, TP, NH ₃ -N, fecal coliform and <i>E. coli</i> bacteria Multi-probe (DO; % saturation ; temperature; pH; depth; specific conductivity), unattended multi-probe	Single grab samples and attended multi-probe for a total of 5 surveys, 4 unattended deployments
	W0112 (IP04.5)	Central Street, North Reading	Same as above	Same as above
	W0110 (IP09)	Peabody Street, Middleton	Same as above	Same as above
Martins Brook	W0136 (MB02)	Park Street, North Reading	Same as above	Same as above
Wills Brook	W0135 (WB01)	near old railroad bed just upstream of confluence with Ipswich River, Lynnfield	fecal coliform and <i>E. coli</i> bacteria	Single grab samples
Unnamed Tributary	W0105 (KS01)	unnamed tributary to Ipswich River at Mt. Vernon Street, Middleton	Same as above	Same as above
Boston Brook	W0130 (BO01)	Liberty Street, Middleton	Color, turbidity, hardness, TP, NH ₃ -N, fecal coliform and <i>E. coli</i> bacteria Multi-probe (DO; % saturation ; temperature; pH; depth; specific conductivity), unattended multi-probe	Single grab samples and attended multi-probe for a total of 5 surveys, 4 unattended deployments

Table 1 (cont.). Sampling sites, descriptions, parameters frequency for Ipswich River Watershed monitoring

Sampling Site Name	Unique ID# (Station ID)	Site Description	Parameters	Frequency
River/Stream Water Quality Surveys				
Fish Brook	W0128 (FB01)	Washington Street/Endicott Road, Topsfield/Boxford	fecal coliform and <i>E. coli</i> bacteria, temperature monitoring	Single grab samples, one deployment
Howlett Brook	W0126 (HB01)	North Street, Topsfield	fecal coliform and <i>E. coli</i> bacteria,	Single grab samples
	W1410 (HB01A)	East Street, Topsfield	temperature monitoring	One deployment
Ipswich River	W0107 (IP15.5)	off Topsfield Road, Ipswich (upstream from confluence of Gravelly Brook)	Color, turbidity, TP, NH ₃ -N, fecal coliform and <i>E. coli</i> bacteria Multi-probe (DO; % saturation ; temperature; pH; depth; specific conductivity), unattended multi-probe	Single grab samples and attended multi-probe for a total of 5 surveys, 4 unattended deployments
	W1394 (IR00)	Mill Road/Highland Street, Ipswich/Hamilton	Same as above as well as hardness	Same as above
Miles River	W0121 (MR01)	driveway of #187 County Road, (across from intersection with Lakeman Lane), Ipswich	Color, turbidity, hardness, TP, NH ₃ -N, fecal coliform and <i>E. coli</i> bacteria Multi-probe (DO; % saturation ; temperature; pH; depth; specific conductivity), unattended multi-probe	Single grab samples and attended multi-probe for a total of 4 surveys
Kimball Brook	W0120 (KB02)	Heard Drive, Ipswich	fecal coliform and <i>E. coli</i> bacteria	Single grab samples
Gravelly Brook	W0124 (GB01)	Topsfield Road, Ipswich	temperature monitoring	One deployment

Figure 1: MassDEP DWM 2005 monitoring station locations in the Ipswich Watershed

2005 Ipswich River Watershed Water Quality Stations

Field and Analytical Methods

Procedures used for water sampling and sample handling are described in the *Sample Collection Techniques for DWM Surface Water Quality Monitoring* (MassDEP 2004a). The Wall Experiment Station (WES) in Lawrence, MA supplied all sample bottles and field preservatives, which were prepared according to the *WES Laboratory Quality Assurance Plan and Standard Operating Procedures* (MassDEP 2001). Procedures for multi-probe calibration and deployment are described in *Water Quality Multi-probe Instrument Use* (MassDEP 2004b) and *Multi-probe Deployments for Unattended Logging* (MassDEP 2004c). Continuous temperature monitoring was conducted at three sites according to *Standard Operating Procedures: Continuous Temperature Monitoring* (MassDEP 2005c).

In-situ parameters (dissolved oxygen, percent saturation, pH, conductivity, temperature, and total dissolved solids) were measured using a multi-probe. Wade-in grab samples were collected and sent to the WES where they were analyzed for low-level total phosphorus (TP), total suspended solids (TSS), ammonia as nitrogen ($\text{NH}_3\text{-N}$) and *E. coli* and fecal coliform bacteria.

Concurrent with the collection of water quality samples, site characteristics and sampling conditions were recorded on the DWM field sheets. Riparian vegetation, observed uses, potential pollution sources, the presence/absence of objectionable deposits (trash, debris and scum), the extent of periphyton/algae/aquatic plant growth within the sampling reach, and sampling conditions were all noted at each station.

Quality Assurance and Quality Control

Procedures used were consistent with the prevailing DWM sampling protocols that are described in the *Sample Collection Techniques for DWM Surface Water Quality Monitoring* (MA DEP 2004a). For all water quality surveys, quality control samples (field blanks and duplicates) were taken at a minimum of one each per analyte per crew per survey.

The DWM quality assurance and database management staff reviewed lab data reports and all multi-probe data. The data were validated and finalized per appropriate data validation procedures as outlined in *DWM Water Quality Data Validation Process (Summary)* (MassDEP 2012a). Detailed data validation procedures for laboratory data, attended multi-probe data and unattended multi-probe data were conducted using appropriate procedures (MassDEP 2012b, MassDEP 2012c, MassDEP 2012d). A complete summary of the review process for all 2005 DWM data is provided in the *DWM Data Validation Report for Year 2005 Project Data* (MassDEP 2007). Appendix 1 of this technical memorandum contains definitions for all data qualifiers.

Station Observations

Station observations were recorded on field sheets for each survey by a DWM investigator. Station observations are described below in Table 2 for each DWM water quality sampling event (MassDEP 2008). Note: If multiple types of periphyton were observed, the highest observed density is used in this table. If periphyton was selected and no density indicated, it was listed as sparse. Only field observations from water quality sampling field sheets are included in Table 2.

Table 2. 2005 Field observations from MA DEP DWM surveys

Waterbody	UniqueID	Station ID	Date	Flow Status	Odor	Water Clarity	Floating Scum	Obj. Deposits	Aquatic Plants	Periphyton	Summary of Comments

Sampling Issues and Coordinator Notes

Some field sheet observations are qualitative and subject to the interpretation of individual sampling crew members; particularly observations of light trash and foam noted on many field sheets. Aquatic plants observations are also subjective as different crews had different plant identification abilities.

Flow status was listed in the field sheet observations table (Table 2) since the Ipswich River Watershed is known to have low flow issues due to municipal groundwater withdrawals.

Survey Conditions

Stream discharge and precipitation information were collected and analyzed to determine hydrologic conditions leading up to and during the water quality sampling events. Precipitation data were collected from the National Weather Service's website (<http://www.erh.noaa.gov/box/dailystns.shtml>) (NOAA 2008). The Lawrence, MA weather station precipitation gage was used to determine precipitation and weather conditions for five days prior to and on the sampling dates (Table 3). It is the practice of DWM to define a "wet-weather" sample as one that was collected at a location that received at least 0.5 inches of rainfall within the 72-hours antecedent to sample collection. Stream flow data were obtained from two continuous USGS stream gages in the watershed (Table 4). The flow duration curves and flow corresponding to 2005 Ipswich sampling dates for two USGS gages in the Ipswich River Watershed are presented in Figures 2 and 3.

Table 3: 2005 Precipitation data summaries for MassDEP DWM survey dates and wet or dry weather determination for sampling dates

Precipitation Data Summary Report- Lawrence Municipal Airport (reported in inches of rain)									
Survey Date	Type of Survey	5 Days Prior	4 Days Prior	3 Days Prior	2 Days Prior	1 Day Prior	Sample Date	72 hour sum	Wet or Dry
5/24/2005	Water Quality	0.01	0.00	0.44	0.64	0.44	1.30	2.38	WET
6/21/2005	Water Quality	0.40	0.10	0.00	0.00	0.01	0.00	0.01	DRY
7/27/2005	Water Quality	T	0.00	0.00	0.00	0.00	0.52	0.52	WET
8/24/2005	Water Quality	0.00	0.00	0.03	0.00	0.00	0.24	0.24	DRY
9/27/2005	Water Quality	0.00	T	0.00	0.00	0.10	0.00	0.10	DRY

" T " = trace amount of precipitation measured

Note: Wet weather days are defined as sample days when the previous 48 hours plus the sample day had 0.5 in. of rain or more.

Water Quality Data

All MassDEP DWM water quality data are managed and maintained in the Water Quality Data Access Database. Tables 5, 7, 8 and 9 below are 2005 data for the Ipswich River Watershed. Table 6 presents the geometric mean of the *E. coli* samples. The procedures used to accept, accept with qualification or censor data are based on the DWM SOP for data validation and usability (MassDEP 2012a), and are in addition to separate quality assurance activities and laboratory validation steps undertaken by the WES. Data qualifiers are listed in Appendix 1.

Table 8. 2005 MassDEP Ipswich River Watershed summary of unattended probe data

For purposes of summarizing the unattended probe data in this technical memorandum, selected statistics for each station and dates of visit are shown. While the data used to calculate the statistics may have been qualified for various reasons (representativeness, inaccuracy, method not followed, etc.), these data are generally considered acceptable for statistical purposes. Censored data were not used in these calculations. For more detailed information about qualified data points for a given station visit, refer to the final data files that have undergone quality assurance/quality control review (available from MassDEP upon request).

see Appendix 1 for a complete list of data qualifiers

Table 9: 2005 MassDEP Ipswich River Watershed continuous temperature deploy data

For purposes of summarizing the continuous temperature data in this technical memorandum, selected statistics for each station and dates of visit are shown. While the data used to calculate the statistics may have been qualified for various reasons (representativeness, inaccuracy, method not followed, etc.), these data are generally considered acceptable for statistical purposes. Censored data were not used in these calculations. For more detailed information about qualified data points for a given station visit, refer to the final data files that have undergone quality assurance/quality control review (available from the MassDEP upon request).

Unique ID	Station ID	Water Body	OWMID	Start Date	End Date	Total Deployment (Hours)	Avg (deg. C)	Standard Deviation	Min (deg. C)	Max (deg. C)	Range of 7-Day Avg of the Daily Max (deg. C)	Maximum Weekly Average Temperature (deg. C)	Avg Daily Amount of Time > 20 deg. C (Hours)	Avg Daily Amount of Time > 28.3 deg. C (Hours)

Appendix 1: 2005 Data Symbols and Qualifiers

Excerpted from: Data Validation Report for Year 2005 Project Data (CN 280.0)

Department of Environmental Protection
Division of Watershed Management

The following data qualifiers or symbols are used in the MADEP/DWM WQD database for qualified and censored water quality and multi-probe data. Decisions regarding censoring vs. qualification for specific, problematic data are made based on a thorough review of all pertinent information related to the data.

General Symbols (applicable to all types):

“ ## ” = Censored data (i.e., data that has been discarded for some reason).

“ ** ” = Missing data (i.e., data that should have been reported).

“ -- ” = No data (i.e., data not taken/not required)

* = Analysis performed by Laboratory OTHER than DEP’s Wall Experiment Station (WES)

[] = A result reported inside brackets has been “censored”, but is shown for informational purposes (e.g., high blank results).

Multi-probe-specific Qualifiers:

“ i ” = inaccurate readings from Multi-probe likely; may be due to significant pre-survey calibration problems, post-survey checks outside typical acceptance ranges for the low ionic and deionized water checks, lack of calibration of the depth sensor prior to use, or to checks against laboratory analyses. Where documentation on unit pre-calibration is lacking, but SOPs at the time of sampling dictated pre-calibration prior to use, then data are considered potentially inaccurate.

“ m ” = method not followed; one or more protocols contained in the DWM Multi-probe SOP not followed, i.e., operator error (e.g., less than 3 readings per station (rivers) or per depth (lakes), or instrument failure not allowing method to be implemented.

“ s ” = field sheet recorded data were used to accept data, not data electronically recorded in the Multi-probe surveyor unit, due to operator error or equipment failure.

“ u ” = unstable readings, due to lack of sufficient equilibration time prior to final readings, non-representative location, highly-variable water quality conditions, etc. See Section 4.1 for acceptance criteria.

“ c ” = greater than calibration standard used for pre-calibration, or outside the acceptable range about the calibration standard. Typically used for conductivity (>718, 1,413, 2,760, 6,668 or 12,900 uS/cm) or turbidity (>10, 20 or 40 NTU). It can also be used for TDS and Salinity calculations based on qualified (“c”) conductivity data, or that the calculation was not possible due to censored conductivity data (TDS and Salinity are calculated values and entirely based on conductivity reading). See Section 4.1 for acceptance criteria.

“ r ” = data not representative of actual field conditions.

“ t ” = tidal conditions

Sample-Specific Qualifiers:

“ a ” = accuracy as estimated at WES Lab via matrix spikes, PT sample recoveries, internal check standards and lab-fortified blanks did not meet project data quality objectives identified for program or in QAPP.

“ b ” = blank Contamination in lab reagent blanks and/or field blank samples (indicating possible bias high and false positives).

“ d ” = precision of field duplicates (as RPD) did not meet project data quality objectives identified for program or in QAPP. Batched samples may also be affected.

“ e ” = not theoretically possible. Specifically, used for bacteria data where colonies per unit volume for e-coli bacteria > fecal coliform bacteria, for lake Secchi and station depth data where a specific Secchi depth is greater than the reported station depth, and for other incongruous or conflicting results.

“ f ” = frequency of quality control duplicates did not meet data quality objectives identified for program or in QAPP.

“ h ” = holding time violation (usually indicating possible bias low)

“ j ” = ‘estimated’ value; used for lab-related issues where certain lab QC criteria are not met and re-testing is not possible (as identified by the WES lab only). Also used to report sample data where the sample concentration is less than the ‘reporting’ limit or RDL and greater than the method detection limit or MDL ($mdl < x < rdl$). Also used to note where values have been reported at levels less than the mdl.

“ m ” = method SOP not followed, only partially implemented or not implemented at all, due to complications with sample matrix (e.g., sediment in sample, floc formation), lab error (e.g., cross-contamination between samples), additional steps taken by the lab to deal with matrix complications, lost/unanalyzed samples, and missing data.

“ p ” = samples not preserved per SOP or analytical method requirements.

“ r ” = samples collected may not be representative of actual field conditions, including the possibility of “outlier” data and flow-limited conditions (e.g., pooled).

“ t ” = tidal conditions
