Appendices

Appendix 1: 2007 Data Symbols and Qualifiers

Introduction

The Charles River Watershed water quality survey was conducted in 2007, along with dissolved metals investigations, multi-day dissolved oxygen/temperature data logging, benthic macroinvertebrate sampling, periphyton/phytoplankton sampling, fish toxics monitoring, and fish population sampling as part of the Division of Watershed Management (DWM) monitoring program. Macroinvertebrate, periphyton, and fish toxics/population data are presented in separate technical memoranda. Consistent with the DWM's general approach to watershed monitoring to meet defined programmatic objectives, water quality surveys were conducted from May through October with an emphasis on the warmest summer months.

Project Objectives

The 2007 surveys of the Charles River Watershed focused on obtaining information to meet the following objectives (MassDEP 2007a):

- Determine the water quality and biological health of riversstreams within the watershed that were not assessed in the 2002 Water Quality Assessment Report and increase coverage to riverstreams that have never before been assessed by conducting assessments based on chemical parameters and biological (aquatic macroinvertebrates, bacteria) communities.
- Provide biological and habitat data to document the status of benthic communities over time (trend monitoring); provide biological, habitat, and dissolved oxygen, temperature, and chemical data to DWM's Environmental Monitoring and Assessment Program to be used in making *Aquatic Life* and *Aesthetics* use assessments required by Section 305(b) of the Clean Water Act; provide data for other informational needs of Massachusetts regulatory agencies.
- Provide quality-assured fecal coliform and *E. coli* data for the purpose of assessing *Primary* and *Secondary Contact Recreational* uses in riversstreams.
- Provide quality-assured dissolved metals data for the purpose of assessing the aquatic life use in riversstreams
- Provide quality-assured data to DWM's Total Maximum Daily Load Program to assist with TMDL development.

Additional information regarding project objectives may be found in: MassDEP 2007b.

Sampling Plan

Water quality surveys were conducted a total of five times (May 15, June 19, July 24, August 28, and October 2) at each of 32 stations over the summer sampling season. Data collection included grab samples for total phosphorus, total nitrogen, ammonia nitrogen, total suspended solids, color, turbidity, hardness (some sites), and *E. coli* bacteria. Also, *in-situ* multiprobe measurements for temperature, dissolved oxygen, % oxygen saturation, pH, specific conductance, and total dissolved solids were collected at these sites using attended Hydrolab or YSI multiprobe meters. Data from these attended meters were used as quality control checks for the deployed (unattended) multiprobes and thermistors at the time of probe deployment and pickup. Continuous temperature and dissolved oxygen monitoring with unattended metered probes was carried out at all 32 sites. These unattended probes were deployed to 16 sites on Friday of the weeks preceding the water sampling surveys. Unattended units were

repositioned on Mondays to the other 16 sites with a final retrieval on Wednesday of that same week. During a portion of the low-flow period water levels at some sites were too low to deploy unattended probes or to take certain water quality samples. Dissolved metals samples were collected on August 9, August 30, September 6, and October 4, 2007. In addition, single parameter temperature probes (thermistors) were deployed at 12 sites for 5 months of continuous data collection. A summary of the types and frequency of sampling is provided in Table 1 below. Table 2 provides detailed information on site location and which analytes were collected at each site. Table 3 summarizes which analytes were collected on which dates during 2007. A map of Charles River Watershed 2007 sampling stations is provided in Figure 1.

Table 1. Types of water quality sampling and deployments conducted in the Charles River Watershed during 2007.

Analyte(s) or Investigation Type	Number of 2007 Charles River Sites	Maximum number of collection visits per site
Water Quality: Bacteria <i>E. coli</i>	32	5
Water Quality: Nutrients - total phosphorus, total nitrogen, ammonia-nitrogen, total suspended solids	32	5
Color, turbidity	32	5
Hardness (collected concurrent with some nutrient samples)	13	3
Deployed dissolved oxygen monitoring	32	5 (2-3 day deploys)
Dissolved Metals: Al, Sb, As, Be, Cd, Cr, Cu, Pb, Ni, Se, Ag, Tl, Zn, Ca, Mg, hardness	12	4
Deployed temperature probes (Thermistors)	12	1 five-month deploy per site

Quality Assurance (QA) and Quality Control (QC)

Quality assurance and quality control procedures used in collecting samples and measurements were consistent with the prevailing DWM protocols that are described in CN 1.21 - Sample Collection Techniques for DWM Surface Water Quality Monitoring (MassDEP 2004a), CN 4.21 - Water Quality Multiprobe Data Collection (MassDEP 2005b) and CN 4.41 - Multiprobe Sonde Deployments for Continuous Unattended Water Quality Data Collection (MassDEP 2007c).

The DWM quality assurance and database management staff reviewed laboratory data reports and all multiprobe data. The data were validated and finalized per data validation procedures outlined in CN 56.15 - DWM Water Quality Data Validation Process (Summary) (MassDEP 2012a). All water quality sample data were validated by reviewing QC sample results, analytical holding time compliance, QC sample frequency and related ancillary data/documentation (at a minimum). A complete summary of the data review process for all 2007 DWM data is provided in CN 320.0 – Water Quality Data Validation Report for Year 2007 Project Data (MassDEP 2012b). Quality assurance efforts were also conducted per CN 225.0 – Quality Assurance Program Plan (MassDEP 2005a). Appendix 1 of this technical memorandum contains definitions for all data qualifiers.

Field and Analytical Methods

Procedures used for water quality sampling and sample handling are described in CN 1.21 - Sample Collection Techniques for DWM Surface Water Quality Monitoring (MassDEP 2004a). The Wall

Experiment Station (WES) supplied all sample bottles and field preservatives, which were prepared according to the WES Laboratory Quality Assurance Plan and Standard Operating Procedures (MassDEP 2001). Procedures used for multiprobe calibration and deployment are described in CN 4.21 - Water Quality Multiprobe Data Collection (MassDEP 2005b) and CN 4.41 - Multiprobe Sonde Deployments for Continuous Unattended Water Quality Data Collection (MassDEP 2007c).

Concurrent with the collection of water quality samples, site characteristics and sampling conditions were recorded on DWM field sheets. Riparian vegetation, observed uses (e.g. swimming, boating, fishing), potential pollution sources, the presence/absence of objectionable deposits (trash, debris and scum), the extent of periphyton/algae/aquatic plant growth within the sampling reach, and sampling conditions were all noted at each station.

Survey Conditions

Precipitation and stream discharge data were analyzed to estimate hydrological conditions during the 2007 water quality surveys in the Charles River Watershed. Precipitation data collected during the survey period in 2007 were downloaded from the National Oceanic and Atmospheric Administration (NOAA), National Climatic Data Center (NCDC) for the Logan International Airport, Boston MA (14739). Data were downloaded from <http://www.ncdc.noaa.gov/cdo-web/#t=firstTabLink>, <http://cdo.ncdc.noaa.gov/qclcd/QCLCD>, or <http://www.ncdc.noaa.gov/oa/ncdc.html>. The precipitation totals on the water quality survey dates and the five days prior to the survey dates were extracted from the records. In addition, the monthly precipitation totals for 2007 and the twenty-year monthly averages for the weather station were downloaded to determine if precipitation amounts in 2007 were above or below normal (Table 4).

Table 4. Total monthly precipitation in 2007 at Logan International Airport, Boston MA and the twenty-year monthly average precipitation totals (NOAA 2012).

Month	2007 Rainfall at Logan Airport (inches)	20-Year Average Rainfall (1981-2000)
	Map Link	
January	2.57	3.36
February	2.2	3.25
March	4.31	4.32
April	6.71	3.74
May	3.7	3.49
June	2.12	3.68
July	5.26	3.43
August	0.66	3.35
September	1.81	3.44
October	2.08	3.94
November	2.8	3.99
December	5.25	3.78

Stream discharge data from three real-time United States Geological Survey (USGS) stream gage stations (Table 5) were downloaded from the USGS (USGS 2012a). In addition, the 7Q10 for each gage station was calculated using USGS StreamStats (USGS 2012b) and included in Table 5. The entire period of record for each station was downloaded and the average daily discharge values on the water quality survey dates and the five days prior to the survey dates were extracted from these records. The percent of time that the average daily discharge on the extracted dates were equaled or exceeded during the entire period of record for the gage was calculated to put the discharge value into historical perspective. The precipitation and discharge data are summarized and presented in Table 6.

Table 5. USGS gage stations used to estimate the hydrological conditions in the Charles River Watershed during the 2007 DWM water quality surveys and the estimated 7Q10 flows for each gage. (USGS 2012a, 2012b). 7Q10 Statistics were obtained from the USGS via <http://streamstatsags.cr.usgs.gov/gages/viewer15.htm?stabbr=GAGES> or <http://streamstats.usgs.gov/massachusetts.html>.

Site Name	Period of Record	7Q10 (cfs)	Remarks	Lat/Long with Map Link
01103280 Charles River At Medway, MA	November 1997 to current year.	3.4	Flow affected by upstream withdrawals for municipal supplies.	42.13972 -71.39
01103500 Charles River At Dover, MA	Discharge: October 1937 to current year. Prior to October 1977, published as "at Charles River Village."	12.9	Flow affected by diversions to and from basin for municipal supplies.	42.25611 -71.26056
01104500 Charles River At Waltham, MA	Discharge: October 1903 to October 1909 (figures of average weekly discharge, equivalent to records of unadjusted discharge at present site), August 1931 to current year.	14.3	Flow affected by diversion to Mother Brook (Station 01104000), diversions to and from basin for municipal supplies, and at times by water released from Stony Brook Reservoir. Prior to 1960, some regulation by mills upstream. Low flow completely regulated by Boston Edison Co. power plant prior to 1954.	42.37222 -71.23417

Table 6. The precipitation totals (inches) and daily average discharge (cubic feet per second) for five days prior to and each DWM 2007 Charles River Watershed survey date (USGS 2012a) (NOAA 2012).

Note: The percent of time that the daily average discharge was equaled or exceeded over the entire period of record at each stream gage are also provided (percent exceeded). Shaded dates indicate the deployment of multiprobes and bold dates indicate collection of water samples.

Station Observations

Station observations were recorded on field sheets for each survey by a DWM investigator. Station observations are described below in Table 7 for each sampling event (MassDEP 2007d).

Table 7. 2007 Field observations from MassDEP DWM Charles River Watershed river surveys.

S=sparse (0-25%, M=moderate (25-50%), D=dense (50-75%), VD=very dense (75-100%), N=none, U=unobservable, NR=not recorded) (MassDEP 2007c)

W1718	7/12	N	Highly Turbid	Brownish										Not Applicable - Probe Deploy Field Sheet	DEPLOYMENT: site is greater than 4 meters deep (boat channel) however exact depth is unknown RETRIEVAL: heavy duck boat traffic, lots of water mixing, Secchi depth 1 meter, no view scope impossible to use, open sky but clouds obscuring sun, some barnacles and bivalves on temperature probe, minimal fouling of probe, obviously tidal

Unique ID/ Station ID	Date	Odor	Water Clarity	Color	Aquatic Plants	Filamentous Algae	Film Algae	Loose Floc	Moss	Floating Scum	Floating Scum Comments	Objectionable Deposits	Objectionable Deposit Comments	Field Sheet Comment
W1719	7/12	N	Highly Turbid	Brownish							Not Applicable - Probe Deploy Field Sheet			
W1720	7/12	N	Moderately Turbid	Brownish							Not Applicable - Probe Deploy Field Sheet			
W1721	7/24	N	Clear	Clear							Not Applicable - Probe Deploy Field Sheet			
W1722	7/24	N	Clear	Clear							Not Applicable - Probe Deploy Field Sheet			DEPLOYMENT: have photos on phone #2. RETRIEVAL: submerged, probe itself in sediment.

Water Quality Data

All MassDEP DWM water quality data are managed and maintained in the Water Quality Data Access Database (WQD). Tables 8 – 12 below provide the 2007 Charles River Watershed water quality data. Table 8 provides water quality data and chemistry for all water quality sites. Table 9 summarizes the number and geometric mean of *E. coli* samples collected at water quality sites. Table 10 provides attended multiprobe water quality data.

Table 11 summarizes dissolved oxygen data collected using unattended multiprobes. Finally, Table 12 summarizes temperature data collected using unattended multiprobes. The procedures used to accept, accept with qualification or censor data are based on the DWM Standard Operating Procedures (SOP) for data validation and usability (MassDEP 2012a) and are in addition to separate quality assurance activities and laboratory validation steps undertaken by the WES. Definitions for the data qualifiers are provided in Appendix 1.

Table 8. 2007 MassDEP DWM Charles River Watershed water quality data.

APPENDIX 1: 2007 DATA SYMBOLS AND QUALIFIERS

Excerpted from: Water Quality Data Validation Report for Year 2007 Project Data (CN 320.0)

The following data qualifiers or symbols are used in the MADEP/DWM WQD database for qualified and censored water quality and multiprobe data. Decisions regarding censoring vs. qualification for specific, problematic data are made based on a thorough review of all pertinent information related to the data.

General Symbols (applicable to all types):

“ ## ” = Censored data (i.e., data that has been discarded for some reason).

“ ** ” = Missing data (i.e., data that should have been reported).

“ -- ” = No data (i.e., data not taken/not required)

“ ^ ” = No data due to no water

Multiprobe-specific Qualifiers:

“ i ” = inaccurate readings from Multiprobe likely; may be due to significant pre-survey calibration problems, post-survey checks outside typical acceptance ranges for the low ionic and deionized water checks, lack of calibration of the depth sensor prior to use, or to checks against laboratory analyses. Where documentation on unit pre-calibration is lacking, but SOPs at the time of sampling dictated pre-calibration prior to use, then data are considered potentially inaccurate.

“ m ” = method not followed; one or more protocols contained in the DWM Multiprobe SOP not followed, i.e., operator error (e.g. less than 3 readings per station (rivers) or per depth (lakes), or instrument failure not allowing method to be implemented.

“ s ” = field sheet recorded data were used to accept data, not data electronically recorded in the Multiprobe surveyor unit, due to operator error or equipment failure.

“ u ” = unstable readings, due to lack of sufficient equilibration time prior to final readings, non-representative location, highly-variable water quality conditions, etc. See Section 4.1 for acceptance criteria.

“ c ” = greater than calibration standard used for pre-calibration, or outside the acceptable range about the calibration standard. Typically used for conductivity (>718, 1,413, 2,760, 6,668 or 12,900 uS/cm) or turbidity (>10, 20 or 40 NTU). It can also be used for TDS and Salinity calculations based on qualified (“c”) conductivity data, or that the calculation was not possible due to censored conductivity data (TDS and Salinity are calculated values and entirely based on conductivity reading). See Section 4.1 for acceptance criteria.

“ r ” = data not representative of actual field conditions.

“ t ” = tidal conditions

Sample-Specific Qualifiers:

“ a ” = accuracy as estimated at WES Lab via matrix spikes, PT sample recoveries, internal check standards and lab-fortified blanks did not meet project data quality objectives identified for program or in QAPP.

“ b ” = blank Contamination in lab reagent blanks and/or field blank samples (indicating possible bias high and false positives).

“d” = precision of field duplicates (as RPD) did not meet project data quality objectives identified for program or in QAPP. Batched samples may also be affected.

“e” = not theoretically possible. Specifically, used for bacteria data where colonies per unit volume for *E. coli* bacteria > fecal coliform bacteria, for lake Secchi and station depth data where a specific Secchi depth is greater than the reported station depth, and for other incongruous or conflicting results.

“f” = frequency of quality control duplicates did not meet data quality objectives identified for program or in QAPP.

“h” = holding time violation (usually indicating possible bias low)

“j” = ‘estimated’ value; used for lab-related issues where certain lab QC criteria are not met and re-testing is not possible (as identified by the WES lab only). Also used to report sample data where the sample concentration is less than the ‘reporting’ limit or RDL and greater than the method detection limit or MDL ($mdl < x < rdl$). Also used to note where values have been reported at levels less than the mdl .

“m” = method SOP not followed, only partially implemented or not implemented at all, due to complications with sample matrix (e.g., sediment in sample, floc formation), lab error (e.g., cross-contamination between samples), additional steps taken by the lab to deal with matrix complications, lost/unanalyzed samples, and missing data.

“p” = samples not preserved per SOP or analytical method requirements.

“r” = samples collected may not be representative of actual field conditions, including the possibility of “outlier” data and flow-limited conditions (e.g., pooled).

“t” = tidal conditions
