Introduction

The Housatonic Watershed water quality survey was conducted in 2007, along with benthic macroinvertebrate sampling and fish population sampling as part of the Division of Watershed Management (DWM) programmatic monitoring (MassDEP 2005a). This technical memorandum reports the water quality data from that survey. Biological data (benthic macroinvertebrate and fish population) are reported in other memoranda. Consistent with DWM's approach to watershed monitoring to meet defined programmatic objectives, water quality surveys were conducted during the months of May, June, July, August, and September. Table 1 provides details and locations regarding these sampling events.

Project Objectives

The specific objectives of the 2007 Housatonic Watershed monitoring were to:

- Provide biological and habitat data to document the status of benthic and fish communities over time (trend monitoring).
- Provide biological, habitat, and dissolved oxygen, temperature, and chemical data to DWM's Environmental Monitoring and Assessment Program to be used in making *Aquatic Life* and *Aesthetics* use assessments required by Section 305(b) of the Clean Water Act; provide data for other informational needs of Massachusetts regulatory agencies.
- Provide quality assured *E. coli* bacteria data for the purpose of assessing *Primary* and *Secondary Contact Recreation* uses.

The results of the 2007 Housatonic water quality monitoring will factor into regulatory actions taken by the MassDEP and the US EPA, will be incorporated into DWM's Water Quality Assessment Reports, and will be used to update Sections 305(b) and 303(d) reporting elements of the Clean Water Act. Additionally, these data may be used in the development of Total Maximum Daily Loads (TMDLs) to address waters not attaining water quality standards and to aid in the development of National Pollutant Discharge Elimination System (NPDES) permits.

Sampling Plan

Samples for total phosphorous, total nitrogen, ammonia-nitrogen, total suspended solids, color, turbidity, *E. coli* bacteria counts, dissolved oxygen and other field measurements were obtained from a total of 30 stations. Water quality surveys (grab samples and in-situ measurements) were conducted on the following dates: May 8th, June 12th, July 17th, August 21st and September 25th. Additionally, continuous temperature and dissolved oxygen monitoring with unattended multi-probes was carried out for consecutive 96 hour periods at 21 sites. Further descriptions of watershed monitoring activities within the Housatonic River Watershed may be found in the Sampling and Analysis Plan (MassDEP. 2007a.).

Field and Analytical Methods

Procedures used for water quality sampling and sample handling are described in CN 1.21 - *Sample Collection Techniques for DWM Surface Water Quality Monitoring* (MassDEP 2004), and CN 101.1 – *Ambient Trace Metal Sampling* (MassDEP 2007b). The Wall Experiment Station (WES) supplied all sample bottles and field preservatives, which were prepared according to the WES Laboratory Quality Assurance Plan and Standard Operating Procedures (MassDEP 2001). Procedures used for multi-probe calibration and deployment are described in CN 4.21 - *Water Quality Multiprobe Data Collection* (MassDEP 2005b) and CN 4.41 - *Multi-probe Sonde Deployments for Continuous Unattended Data Collection* (MassDEP 2007c).

Table 1. MassDEP DWM 2007 Housatonic River Watershed Sampling Station Descriptions and Sampling Matrix

River/Stream	Unique ID*	Station	Monitoring Site Description (sample type**)
Anthony Brook	W1576	AB01	North Mountain Road, Dalton (6)
Beartown Brook	W1567	BT01	Meadow St., Lee (1,2,4,5)
E. Br. Housatonic R.	W1572	EB01A	Old Windsor Road, Dalton (1,4,5)
E. Br. Housatonic R.	W1574	EB01B	Route 8 crossing in Dalton nearest the Hinsdale border (3)
E. Br. Housatonic R.	W1107	02B	Downstream of Pomeroy Ave., Pittsfield (1,2,4,5)
E. Br. Housatonic R.	W1726	O2BFF	Pomeroy Avenue, Pittsfield (1,2)
E. Br. Housatonic R.	W1724	Crane1	~150 feet downstream from the first dam upstream of South Street, Dalton (3)
E. Br. Housatonic R.	W1725	Crane2	Housatonic Street, Dalton (3)
E. Br. Housatonic R.	W1727	Crane3	Route 8, Dalton (3)
Egypt Brook	W1603	EG01	Holiday Road, Dalton (6)
Goose Pond Brook	W1110	07B	Tyringham Road, Lee (1,4,5)
Green River	W1112	23A	Rte 23/41, Great Barrington (1,4,5)
Hop Brook	W1115	HB	Meadow Street, Lee (1,2,4,5)
Housatonic River	W1105	04B	Holmes Road, Pittsfield (1,2,4,5)
Housatonic River	W1104	04C	New Lenox Road, Lenox (1,2,4,5)
Housatonic River	W1103	19A	~360 ft upstream of Valley Street, Lenox (1,4,5)
Housatonic River	W1102	19C	Downstream of Lee WWTP discharge, Lee (4,5)
Housatonic River	W1101	19E	Upstream of RR bridge east of Route 183, Stockbridge (1,2,4,5)
Housatonic River	W1100	20A	Division Street, Great Barrington (1,3,4,5)
Housatonic River	W1099	20D	Kellogg Road, Sheffield (1,2,3,4,5)
Housatonic River	W1566	20F	Rannapo Road, Sheffield (2,4,5)
Hubbard Brook	W1113	15A	Route 7, Sheffield (1,2,3,4,5)
Hubbard Brook	W1571	15C	Upstream of Egremont Road, Sheffield (1,3)
Konkapot River	W0377	KR07	East side at Clayton Mill River Road, New Marlborough (1,4,5)
Konkapot River	W0375	KR05	Upstream Konkapot Road, New Marlborough (1,4,5)
Konkapot River	W0371	KR01	Downstream of Route 7A bridge, Sheffield (1,2,4,5)
Larrywaug Brook	W1561	LW01	South of Route 90, between Route 183 and the old stone bridge abutments upstream of road, Stockbridge (1,2,4,5)
Onota Brook	W1570	OB01	Most downstream crossing of Peck's Road, Pittsfield (1,2,4,5)
Rawson Brook	W1569	RA01	~925 feet upstream from Wellman Road, Monterey (1,2,4,5)
Sackett Brook	W1563	SA01	East New Lenox Rd, Pittsfield (1,3,4,5)
Schenob Brook	W1559	SC01	Upstream of Miller Ave., Sheffield (1,2,4,5)
SW Br. Housatonic R.	W1573	SWB01	downstream from railroad bridge west of Clapp Park, Pittsfield (1,2,3,4,5)
Town Brook	W1562	TB01	Upstream of unnamed tributary confluence at Miner Road, Lanesborough (1,2,4,5)
Town Brook	W1723	TB01A	Downstream at Miner Road, Lanesborough (1,2)
Wahconah Falls Brook	W1568	WF02	Most downstream crossing of Route 9/8A, Dalton (1,4,5)
Washington Mt. Brook	W1564	WM01	Most downstream crossing of Washington Mountain Road, Lee (1,4,5)
West Br. Housatonic R.	W1575	HW01	~630 feet downstream from Route 20, Pittsfield (1,2,3,4,5)
Williams River	W1098	06A	Division St., Great Barrington (1,2,3,4,5)
Williams River	W1560	06B	~400 feet downstream of East Alford Road, West Stockbridge (1,2,3,4,5)

** 1=Attended multi-probe, 2=Deployed multi-probe, 3=Temperature Probe, 4=Nutrients/Color/Turbidity, 5=Bacteria, 6= Dissolved metals

Concurrent with the collection of water quality samples, site characteristics and sampling conditions were recorded on DWM field sheets. Riparian vegetation, observed uses (e.g. swimming, boating, fishing), potential pollution sources, the presence/absence of objectionable deposits (trash, debris and scum), the extent of periphyton/algae/aquatic plant growth within the sampling reach, and sampling conditions were noted at each station.

Quality Assurance (QA) and Quality Control (QC)

Quality assurance and quality control procedures used in collecting samples and measurements were consistent with the prevailing DWM protocols that are described in CN 1.21 - *Sample Collection Techniques for DWM Surface Water Quality Monitoring* (MassDEP 2004), CN 4.21 - *Water Quality Multiprobe Data Collection* (MassDEP 2005b) and CN 4.4 - *Multi-probe Deployments for Unattended Logging* (MassDEP 2004b).

The DWM quality assurance and database management staff reviewed lab data reports and all multi-probe data. The data were validated and finalized per procedures outlined in CN 56.6 - *DWM Water Quality Data Processing and Validation* (MassDEP 2012a). All water quality sample data were validated by reviewing QC sample results, analytical holding time compliance, QC sample frequency and related ancillary data/documentation (at a minimum). A complete summary of the data review process for all 2007 DWM data is provided in CN 320.0 – *Water Quality Data Validation Report for Year 2007 Project Data* (MassDEP 2012b). Appendix 1 of this technical memorandum contains definitions for all data qualifiers.

Station Observations

Station observations were recorded on field sheets for each survey by a DWM investigator. Station observations are described in Table 2 for each DWM sampling event.

Sampling Issues and Coordinator Notes

The Housatonic sampling effort for 2007 generally followed the proposed sampling set forth in the SAP (MassDEP 2007a). Some monitoring was added in response to conditions observed in the field, particularly in the Williams River. Excessive algal growth noted at stations 06A and 06B resulted in benthic macroinvertebrate and periphyton monitoring also being conducted at these two stations, in addition to the original plan for fish population sampling due to temperature concerns.

At Washington Mountain Brook, station WM01, dense and pervasive “blue-grey” color filamentous algae was reported by crew leads towards the latter part of the sampling season. Benthic macroinvertebrate sampling had been planned, and a fish population survey was added at this station to check for possible impacts indicated by the algae growth. This stream had not been previously designated as a segment and no previous water quality data had been collected. The source of the algae remains unclear—possible influence to this otherwise forested watershed include an old dumping area, houses/trailers located close to the stream bank upstream, a lack of riparian vegetation upstream, and natural causes. Investigations upstream of the sampling location on foot did not directly rule out or implicate any of these sources.

Although the Massachusetts surface water quality standards generally apply bacteria criteria seasonally from April 1 – October 15, given the high flows and low water temperatures in this watershed in spring, it may be advisable to delay bacteria sampling until mid May and thereafter. Sampling for bacteria between mid May and the end of September may be more representative of favorable conditions for recreational contact.

Survey Conditions

Precipitation and stream discharge data were collected and analyzed to determine hydrologic conditions leading up to and during the water quality sampling events. This review was used, in part, to determine whether the water quality and bacteria data were representative of “wet-” or “dry-weather” sampling conditions. Precipitation data were collected from the National Weather Service’s website (<http://www.erh.noaa.gov/box/dailystns.shtml>) (NOAA 2012). The Pittsfield, MA weather station precipitation gage was used to determine precipitation and weather conditions for five days prior to and on the sampling dates (Table 3).

Stream flow data were obtained from two continuous USGS stream gages in the watershed: Gage 01197500 on the Housatonic River near Great Barrington and Gage 01197000 on the East Branch Housatonic River at Coltsville. USGS also maintains gage 01198000 on the Green River near Great Barrington; however, flows are not available for the first three survey dates in 2007, thus these data are not reported here. Data from the above stream gages were retrieved from USGS online sources (USGS 2012a; 2012b) and are presented in Table 3.

Table 3. The precipitation totals (inches) and daily average discharge (cubic feet per second) for five days prior to and each DWM 2007 Housatonic River Watershed survey date (USGS 2012a; NOAA 2012).

Note: Shaded dates indicate the deployment of multiprobes. “A” indicates that an Attended Multi-probe was used on that date, and “S” indicates that a water sample was collected on that date. T = trace precipitation. The percentage (in brackets) is a comparison of the 2007 daily mean discharge on the date noted to the Period of Record daily mean discharge for that date.

Date	Precipitation (in.)	Daily Mean Discharge in cfs (percent of that date's period of record daily mean)	
		East Branch Housatonic River at Coltsville, MA (01197000)	Housatonic River near Great Barrington, MA (01197500)

It is the practice of DWM to define a “wet-weather” sample as one that was collected at a location that received at least 0.5 inches of rainfall within the 72 hours antecedent to sample collection. Only July 6 was considered representative of wet-weather conditions; all other sampling dates represented dry conditions.

Water Quality Data

Raw data files, field sheets, lab reports and chain of custody (COC) records are stored in open files at the DWM in Worcester. Data exports for publishing are provided by DWM’s database managers following data validation. Water Chemistry, Attended Multi-probe, and Unattended Multi-probe data are provided below (Tables 5, 6, and 7, respectively). Data qualifiers are listed in Appendix 1.

Appendix 1: 2007 Data Symbols and Qualifiers

Excerpted from: CN 320.0 – *Water Quality Data Validation Report for Year 2007 Project Data.*
(MassDEP 2012b)

The following data qualifiers or symbols are used in the MADEP/DWM WQD database for qualified and censored water quality and multi-probe data. Decisions regarding censoring vs. qualification for specific, problematic data are made based on a thorough review of all pertinent information related to the data. Data qualifiers reported by laboratories are typically either directly-transferable to DWM data (e.g., “H” for holding time violation) or indirectly-transferable, where the qualifier symbol is transformed to conform to DWM’s qualifier list (e.g., “R” qualifier used by a lab to reject data due to poor QC results is transformed to “a”).

General Symbols (applicable to all types):

“ ## ” = Censored data (i.e., data that has been discarded for some reason).

“ ** ” = Missing data (i.e., data that should have been reported).

“ -- ” = No data (i.e., data not taken/not required)

“ ^ ” = No data due to no water

Multi-probe-specific Qualifiers:

“ i ” = inaccurate readings from Multi-probe likely; may be due to significant pre-survey calibration problems, post-survey checks outside typical acceptance ranges for the low ionic and deionized water checks, lack of calibration of the depth sensor prior to use, or to checks against laboratory analyses. Where documentation on unit pre-calibration is lacking, but SOPs at the time of sampling dictated pre-calibration prior to use, then data are considered potentially inaccurate.

“ m ” = method not followed; one or more protocols contained in the DWM Multi-probe SOP not followed, ie. operator error (eg. less than 3 readings per station (rivers) or per depth (lakes), or instrument failure not allowing method to be implemented).

“ s ” = field sheet recorded data were used to accept data, not data electronically recorded in the Multi-probe surveyor unit, due to operator error or equipment failure.

“ u ” = unstable readings, due to lack of sufficient equilibration time prior to final readings, non-representative location, highly-variable water quality conditions, etc. See Section 4.1 for acceptance criteria.

“ c ” = greater than calibration standard used for pre-calibration, or outside the acceptable range about the calibration standard. Typically used for conductivity (>718, 1,413, 2,760, 6,668 or 12,900 uS/cm) or turbidity (>10, 20 or 40 NTU). It can also be used for TDS and Salinity calculations based on qualified (“c”) conductivity data, or that the calculation was not possible due to censored conductivity data (TDS and Salinity are calculated values and entirely based on conductivity reading). See Section 4.1 for acceptance criteria.

“ r ” = data not representative of actual field conditions.

“ t ” = tidal conditions

Sample-Specific Qualifiers:

“ a ” = accuracy as estimated at WES Lab via matrix spikes, PT sample recoveries, internal check standards and lab-fortified blanks did not meet project data quality objectives identified for program or in QAPP.

“ b ” = blank Contamination in lab reagent blanks and/or field blank samples (indicating possible bias high and false positives).

“ d ” = precision of field duplicates (as RPD) did not meet project data quality objectives identified for program or in QAPP. Batched samples may also be affected.

“ e ” = not theoretically possible. Specifically, used for bacteria data where colonies per unit volume for e-coli bacteria > fecal coliform bacteria, for lake Secchi and station depth data where a specific Secchi depth is greater than the reported station depth, and for other incongruous or conflicting results.

“ f ” = frequency of quality control duplicates did not meet data quality objectives identified for program or in QAPP.

“ h ” = holding time violation (usually indicating possible bias low)

“ j ” = ‘estimated’ value; used for lab-related issues where certain lab QC criteria are not met and re-testing is not possible (as identified by the WES lab only). Also used to report sample data where the sample concentration is less than the ‘reporting’ limit or RDL and greater than the method detection limit or MDL ($mdl < x < rdl$). Also used to note where values have been reported at levels less than the mdl.

“ m ” = method SOP not followed, only partially implemented or not implemented at all, due to complications with sample matrix (eg. sediment in sample, floc formation), lab error (eg. cross-contamination between samples), additional steps taken by the lab to deal with matrix complications, lost/unanalyzed samples, and missing data.

“ p ” = samples not preserved per SOP or analytical method requirements.

“ r ” = samples collected may not be representative of actual field conditions, including the possibility of “outlier” data and flow-limited conditions (e.g., pooled).

“ t ” = tidal conditions
