

I spent my youth on the Cape (Cotuit) and now have property on Martha's Vineyard. I think that Governor Romney's proposal for the Task Force makes imminent sense and that it is imperative that the Task Force makes its studies and its recommendations prior to any final action being taken by the Corps of Engineers or the wind turbine company. The worst thing that could happen would be for the wind project to be implemented without proper review and, as a result, very possibly do significant environmental and economic damage that is irreversible.

Sincerely,

Walter G. Thompson
