Disclaimer .............................................................................................................................................. 2
Acknowledgements ................................................................................................................................. 3
Preface .................................................................................................................................................... 4
Table of Contents .................................................................................................................................. 5
List of Figures .......................................................................................................................................... 8
List of Tables .......................................................................................................................................... 10
List of Appendices ............................................................................................................................... 11

## Chapter 1: Introduction ........................................................................................................................ 14
1.1 Nitrogen Pollution ............................................................................................................................... 14
1.2 Case Studies on Watershed-Based Permitting: Massachusetts Roadmap for Regulatory Change ......................................................................................................................................... 16
1.2.1 Selection of Coastal Watersheds .................................................................................................. 16
1.2.2 Watershed and Embayment Characteristics ............................................................................. 18
1.2.3 Pilot Study Team Recruitment ................................................................................................... 18
1.2.4 Pilot Project Team Guiding Principles ....................................................................................... 18
1.2.5 Team Meetings ............................................................................................................................ 19
1.3 The Massachusetts Estuaries Project (MEP) .................................................................................. 20
1.3.1 MEP History ............................................................................................................................... 20
1.3.2 MEP Linked Watershed Embayment Model ............................................................................ 20
1.3.3 Sentinel Stations .......................................................................................................................... 21
1.3.4 MEP Technical Reports ............................................................................................................. 22
1.3.5 MEP Estuarine Restoration Process .......................................................................................... 22
1.3.6 Natural Attenuation of Nitrogen ............................................................................................... 25
1.3.7 The MEP Community Partnership ............................................................................................ 26
1.3.8 MEP Resources .......................................................................................................................... 27
1.4 Applicable Federal, State, County, and Local Roles ......................................................................... 27
1.4.1 Federal Role ................................................................................................................................ 27
1.4.2 State Role ................................................................................................................................... 28
1.4.3 County Role ............................................................................................................................... 33
1.4.4 Local Role ................................................................................................................................... 35
1.5 Wastewater Treatment and Effluent Discharge Siting ................................................................... 37
1.6 Watershed-Based Permitting and Nutrient Trading in this Project ............................................... 37
1.6.1 What is Watershed-based Permitting? ....................................................................................... 37
1.6.2 What is Nutrient Trading? ........................................................................................................... 38

## Chapter 2: Popponesset Bay Pilot Project ......................................................................................... 40
2.1 Popponesset Bay Watershed Facts ................................................................................................. 41
2.2 The Popponesset Watershed .......................................................................................................... 42
2.2.1 General Description ................................................................................................................... 42
2.2.2 Geology and Hydrogeology ...................................................................................................... 43
2.2.3 Water Quality ............................................................................................................................. 44
2.2.4 Eelgrass Habitat .......................................................................................................................... 47
2.2.5 Sentinel Station ........................................................................................................................... 49
2.2.6 Watershed Land use .................................................................................................................. 49
2.3 Sources of Nitrogen ....................................................................................................................... 49
2.3.1 Wastewater Treatment Plants and Onsite Systems ................................................................. 51
2.3.2 Treatment Plant Discharge Locations ...................................................................................... 52
2.3.3 Stormwater ............................................................................................................................... 53
2.3.4 Fertilizer Use ............................................................................................................................. 53

Nitrogen TMDL Planning: Three Case Studies of Towns Sharing a Coastal Watershed

Chapter 3: Three Bays Pilot Project

3.1 Three Bays Watershed Facts
3.2 The Three Bays Watershed
3.2.1 General Description
3.2.2 Geology and Hydrogeology
3.2.3 Water Quality
3.2.4 Eelgrass Habitat
3.2.5 Sentinel Station
3.2.6 Watershed Land use
3.3 Sources of Nitrogen
3.3.1 Wastewater Treatment Plants and Onsite Systems
3.3.2 Treatment Plant Discharge Locations
3.3.3 Stormwater
3.3.4 Fertilizer Use
3.4 Demographics
3.4.1 Land Use Change
3.4.2 Population Growth
3.4.3 Population Density
3.5 Three Bays Pilot Project
3.5.1 Building a Watershed Team
3.5.2 Team Meetings
3.5.3 SMAST Linked Model Runs
3.5.4 Proposals for Sewering the Three Bays Watershed
3.5.5 Pilot Project Team Issues and Suggestions

Chapter 4: Pleasant Bay Watershed

4.1 Pleasant Bay Watershed Facts
4.2 The Pleasant Bay Watershed
4.2.1 General Description
Chapter 5: Municipal, Regional, and State Accomplishments - Public and Private

5.1 Inter-Municipal CWMP Coordination and Planning

5.2 Municipal Accomplishments

5.2.1 Town of Mashpee

5.2.2 Town of Barnstable

5.2.3 Town of Sandwich

5.2.4 Town of Brewster

5.2.5 Town of Chatham

5.2.6 Town of Harwich

5.2.7 Town of Orleans

5.3 Regional Accomplishments: Barnstable County

5.3.1 Cape Cod Commission’s Regional Policy Plan: No-Net Nitrogen

5.3.2 Cape Cod Commission’s 2008 Draft Regional Policy Plan

5.3.3 Cape Cod Commission Wastewater Planning Conferences and Publications

5.3.4 Cape Cod Water Protection Collaborative

5.3.5 Coastal Zone Management National Estuarine Programs

List of Appendices

Appendix A Glossary  195
Appendix B MEP Linked Watershed/Estuary Model Approach to Calculating Nitrogen Thresholds  201
Appendix C Massachusetts Surface Water Quality Standards  208
Appendix D Massachusetts Groundwater Quality Standards  212
Appendix E Nitrogen Load Allocations  215
Appendix F Fact Sheet: Implementing Total Nitrogen TMDLs  217
Appendix G TMDL Implementation and SRF Funding Questions and Answers  221
Appendix H MassDEP Town Recruitment Letter  223
Appendix I MEP Technical Report Executive Summary - Popponesset Bay  225
Appendix J Executive Summary of Literature Review of Enhanced Natural Attenuation by the Woods Hole Group  235
