INTRODUCTION

The Massachusetts Hydrogeologic Information Matrix summarizes currently available information sources on the geology and hydrology of Massachusetts. The matrix, arranged by United States Geological Survey (USGS) 7 ½ minute topographic sheets, contains information bedrock and surficial geology, unconsolidated materials drainage, hydrologic data, groundwater availability and quality, and related reports.

The geologic and hydrologic information in the matrix is derived from a number of sources, each of which is keyed to the matrix, identified by footnotes, and referenced. USGS Bulletins and Professional Papers relate primarily to bedrock and surficial geology. The Survey's Geologic Quadrangle Maps include bedrock geology and surficial geology maps. USGS Geophysical Investigations Maps consist of aeromagnetic maps printed on transparent paper and are designed to be used as overlays on the USGS Geologic Quadrangle bedrock maps. The Survey's Hydrologic Atlases identify water resources of major river basins. These studies include information on drainage, quality and availability of surface water and groundwater, regional storage analysis, and water use. USGS Hydrologic Data Reports include descriptions and logs of selected wells, test wells, and borings; records of water levels at selected observation wells; and information on chemical analyses of surface water and groundwater. The Survey's Water Resource Investigations include a variety of groundwater studies as well as a series of gazetteers of hydrologic characteristics of streams in major river basins. The gazetteers include information on monthly flows, low-flow frequencies, the duration of daily flows, and subbasin drainage areas. USGS Water Supply Papers relate primarily to groundwater availability and quality. The USGS Miscellaneous Geologic Investigations Maps, Miscellaneous Field Studies Maps, and Open-File Reports consist of a variety of geologic and hydrologic studies.

Most sources of information used in the matrix, as well as copies of the matrix itself, are available to the general public. An address list at the end of the matrix identifies the state and federal agencies information from which the matrix information was derived.

Any additional comments on the matrix, including updated information and corrections, are welcome and should directed to:

USE OF THE MATRIX

To identify hydrogeologic information for a particular region in the Commonwealth, the city town or region of interest must be identified with the particular USGS quadrangle which covers the area of interest. For example, to locate any information pertaining to the town of Adams, the quadrangle or quadrangles in which Adams occurs must be determined by consulting Appendix A.

City/Town	Quadrangle Names		
Adams	Cheshire	Williamstown	
	North Adams	Windsor	

As the appendix indicates, Adams occurs in the four quadrangles of Cheshire, North Adams, Williamstown , and Windsor. Because each quadrate in turn may encompass a number of other cities/towns, the information on each quadrangle is not necessarily restricted to Adams. Once the quadrangles which encompass Adams have been identified, each quadrangle must be surveyed for hydrogeological information that relates to the Adams.

Quadrangle Name	Bedrock Geology	Surficial Geology	Drainage	Hydrologic Data Reports	Groundwater Availability and Quality
North Adams	B-159 GP-454 GQ-139 WRI-99-4000	B-159 OF-68-133	HA-481,506 OF-66-131 OF-81-1199 OF-96-397 WRI-83-4250 WRI-84-4282 WRI-96-4115	HD-6 HD-13 HD-15	HA-249, 481 HA-506 WSP-110 c WRI-95-4203 WRI-96-4115 WRI-98-4042 WRI-98-4247 OF-96-358 OF-96-397 MP-1

The following is a review of the information available on the North Adams quadrangle which would be used in the hydrogeological survey of Adams; this example should serve as a guide on how to use the matrix. It must be kept in mind, however, that first, the information in this example is not exclusively limited to Adams, because that the North Adams quadrangle also contains portions of Clarksburg, Florida, Monroe, North Adams, and Savoy; and secondly, a complete review of all information available on the town of Adams must include a review of the Cheshire, Williamstown, and Windsor quadrangles, as each of these quadrangles also encompass parts of Adams.

Bedrock Geology

- 1) Bulletin B-159 includes general bedrock geology of eastern Berkshire County.
- 2) Geophysical Investigations Map GP-454 is an aeromagnetic map of the North Adams Quadrangle, printed on transparent paper for use as an overlay on Geologic Quadrangle
- 3) Map GQ-139 which is a bedrock geology map of the North Adams quadrangle

Surficial Geology

- 1) Bulletin B-159 includes general surficial geology of eastern Berkshire County.
- 2) Open-File Report OF-68-133 is a Preliminary Materials map which included surficial geologic information for the North Adams quadrangle

Drainage

- 1) Hydrologic Investigations Atlases HA-481 and HA-506 include drainage information for the Hoosic River basin (HA-481), which covers most of the town of Adams; and the Deerfield River basin (HA-506), which covers only the northeast portion of the town.
- 2) Open-File Reports OF-81-1199 and OF-82-632 delineate drainage divides for the Hudson River basin (OF-81-1199), which includes the Hoosic River subbasin; and the Deerfield and Millers River basins (OF-82-632).
- 3) Water Resources Investigations WRI-83-4250 and WRI-84-4282 include drainage information for the Hudson River basin (WRI-83-4250), and the Connecticut River basin which includes the Deerfield River subbasin.

Hydrologic Data Reports

Hydrologic Data Reports HD-6, HD-13, and HD-15 cover Western Massachusetts, the Deerfield River basin, and the Hoosic River basin, respectively. These reports include descriptions and logs of selected wells, test wells, and borings; records of water levels in selected observation wells; and information on chemical analyses of surface water and groundwater.

Groundwater Availability and Quantity

- 1) Hydrologic Atlas HA-249 is a groundwater favorability map of the Connecticut River Basin.
- 2) Hydrologic Atlases HA-481 and HA-506 present information on the water resources of the Hoosic and Deerfield River basin, respectively.
- 3) Water Supply Paper 110c gives general information on water resources for a region which includes northern Berkshire County.
