South Coast Rail Phase 1
Coming late 2023

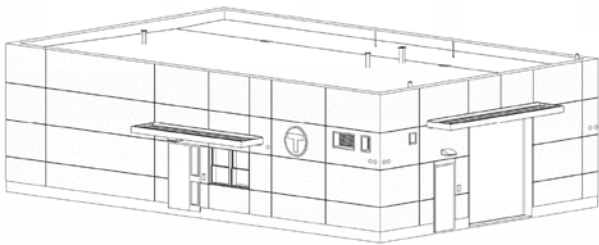

Layover Facility Details

About the Site

Weaver's Cove Layover is located at 2680 North Main Street in Fall River. It will store trains overnight between the last trip at the end of each night and the first trip the following day. It is located next to the Fall River Secondary, the main line serving Fall River. The Weaver's Cove site includes a portion of the former Shell Oil terminal. The site soils and groundwater have been extensively analyzed and remediation has been nearly completed.

Operations

At the end of the day, a crew cleans the trains for the next use. Train crews will arrive in the morning before the first trains leave. They will also perform typical evening tasks as the last trains arrive for the night, including cleaning, fueling and minor maintenance activities. The crew quarters will provide locker rooms and office and garage space for equipment.
