

Weekly COVID-19 Vaccination Report

The Weekly COVID-19 Vaccination Report includes the most currently available information on vaccines administered, as well as more granular information by geography, demographic factors, and more.

This report will be posted each Wednesday.

An important note regarding vaccination progress

Source: Centers for Disease Control and Prevention. COVID Data Tracker.
Atlanta, GA: US Department of Health and Human Services, CDC; May 10, 2023.

<https://covid.cdc.gov/covid-data-tracker>

Massachusetts currently ranks tied for first among US states for the rate of persons with one or more doses administered per capita.

Massachusetts currently ranks third for the percent of the population with a completed primary series among US states.

Massachusetts currently ranks third for the percent of the population ages 5 years and older who have received a bivalent booster dose among US states.

Please note: This report reflects data available in the Massachusetts Immunization Information System (MIIS) as of Monday at 11:59PM and is pulled every Tuesday. Due to provider reporting of administration data and data processing, data may be available in MIIS 24-48 hours or more after administration. Due to time needed for inputting shipment data, shipment data may be available in MIIS 24-48 hours or more after shipment. MIIS data are available for analysis one calendar day after they are reported to the MIIS. Data are current as of time of publication and may be subject to change in future publications as additional data are reported. All data are from MIIS unless otherwise noted.

Individuals who Received COVID-19 Vaccines

Data as of September 25, 2023

Cumulative number and percent* of people vaccinated and doses administered, comparing previous week's reports to this week's report

	Three weeks ago: cumulative through September 4, 2023	Two weeks ago: cumulative through September 11, 2023	Last week: cumulative through September 18, 2023	This week: cumulative through September 25, 2023
At least one dose -- number of people who received at least one dose of any COVID-19 vaccine**	6,786,810 97%	6,785,979 97%	6,784,321 97%	6,786,531 97%
Primary series complete -- number of people who received a primary series of vaccine	5,966,134 85%	5,967,353 85%	5,968,211 85%	5,968,946 85%
Boosted -- number of people who received a dose of Moderna or Pfizer booster vaccine since 9/1/2022***	2,123,901 30%	2,127,168 30%	2,129,016 30%	2,139,646 30%
Total doses administered	19,312,039	19,317,158	19,335,684	19,416,111

*Percentages are based on the number of people recorded in MIIS divided by the estimated state population from the UMass Donahue Institute. See source information below.

**Now that the majority of Massachusetts residents have received at least one dose of COVID-19 vaccine, changes to this cumulative count may represent data corrections and deduplications.

***After 9/1/2022 nearly all booster doses were the bivalent formulation of Moderna or Pfizer COVID-19 vaccine.

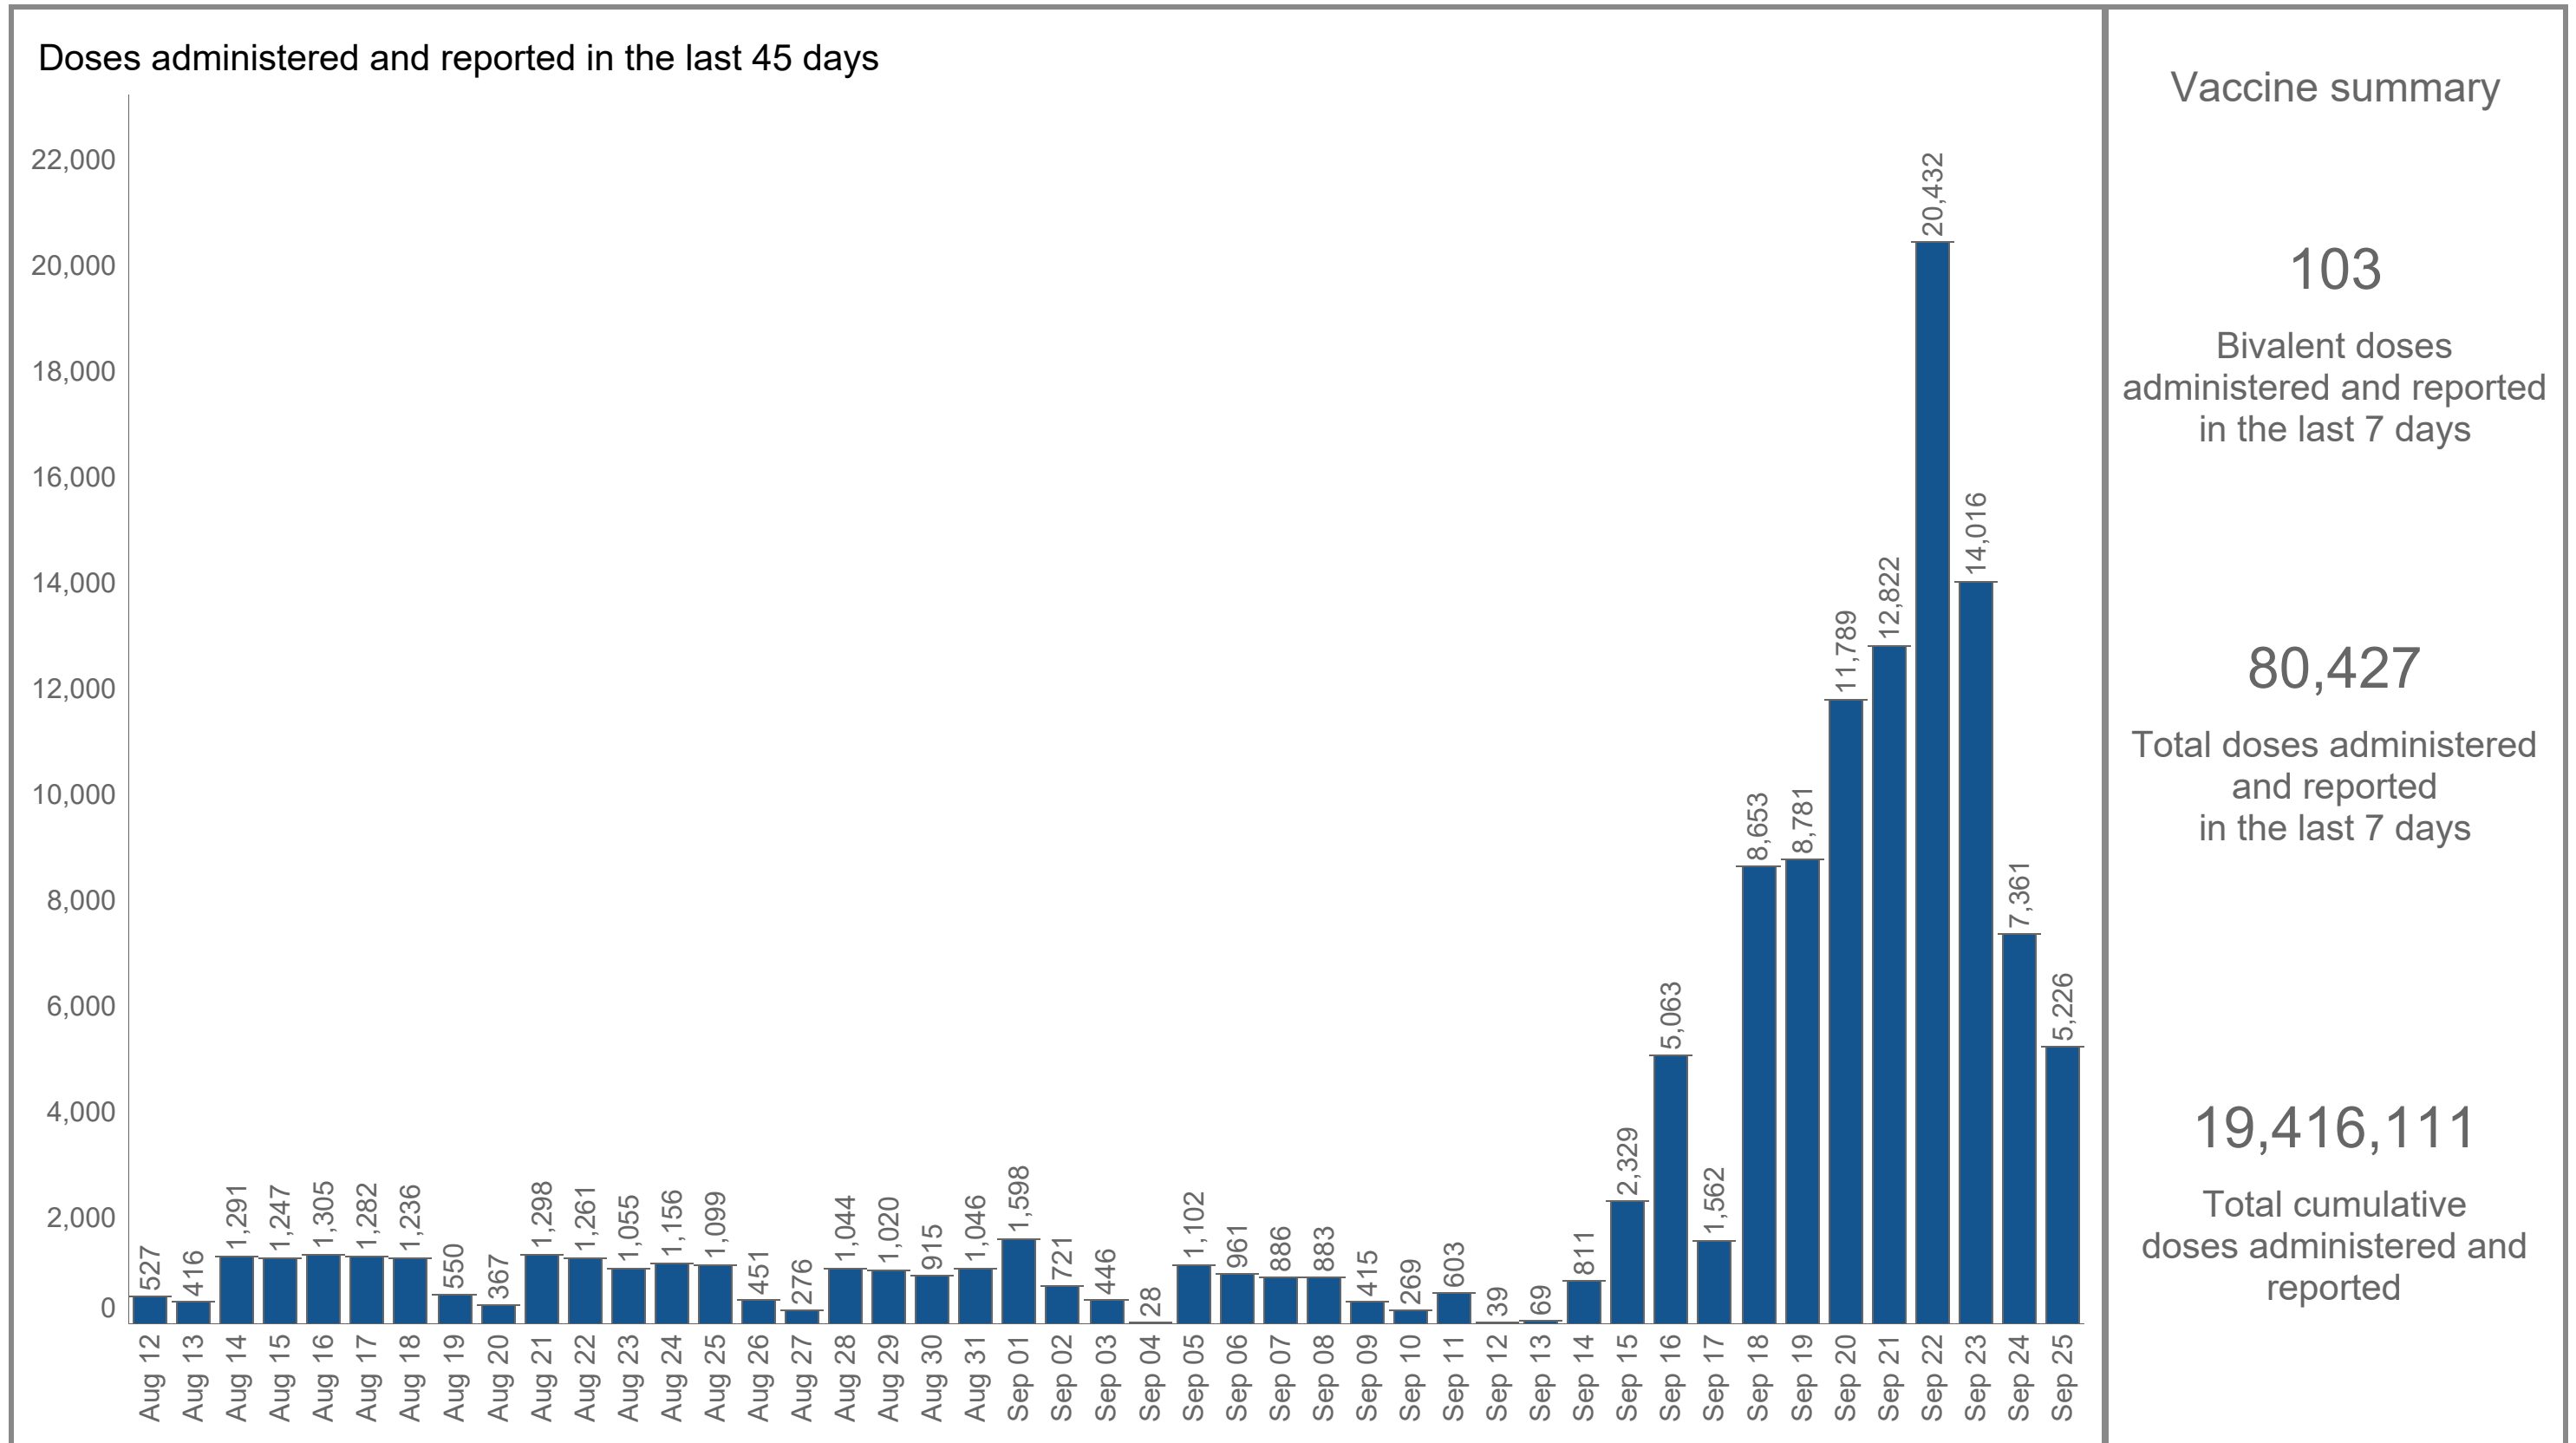

See the definitions page at the end of this document for the full definitions of the terms used on this page.

Source: Data from the Massachusetts Immunization Information System (MIIS) are as of midnight the night before. Population estimates source: MDPH calculates rates per 100,000 population using denominators estimated by the University of Massachusetts Donahue Institute using a modified Hamilton-Perry model (Strate S, et al. Small Area Population Estimates for 2011 through 2020, report, Oct 2016.)

See <https://www.mass.gov/info-details/covid-19-booster-frequently-asked-questions> for details on which formulation of vaccine is recommended at which intervals.

COVID-19 Vaccine Doses Administered

Data as of September 25, 2023

Data reflect the date doses were reported as having been administered. See definitions page at the end of this document for additional information. Source: Data from the Massachusetts Immunization Information System (MIIS) are as of midnight the night before.

Immunization Status by Age Group

Data as of September 25, 2023

In Massachusetts, 30% of residents have been boosted since 9/1/2022**, compared with 17% of the US population.

Booster status of individuals vaccinated in MA by age group*

Percent of the Massachusetts population...

*Population estimates are used to estimate the unvaccinated population by subtracting those vaccinated from the population estimate. Immunization status is reported by the age of the individual at the time of data extraction. Individuals who reach boosted status at a younger age enter older age categories over time. The number of people vaccinated in older age groups may be larger than the population estimates for those age groups. Immunization status is determined by the number and formulation of vaccine doses reported to MIIS on the individual's record.

**After 9/1/2022 nearly all booster doses were the bivalent formulation of Moderna or Pfizer COVID-19 vaccine.

Critical definitions

Please note: the following terms and definition apply to COVID-19 only. Updated 4/5/2023

Doses administered: All doses of COVID-19 vaccine that have been reported to MIIS are included in this measurement. This includes doses reported by RICAIR, the Rhode Island immunization registry, and the Veterans Administration for individuals with Massachusetts addresses.

At least one dose: An individual is counted as having at least one dose if they have a COVID-19 vaccine on record.

Primary series complete: An individual is counted as having primary series complete if they meet the CDC guidelines (see <https://www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date.html>), which are based on age and vaccine formulation.

Boosted after 9/1/2022: An individual is counted as boosted if they received a booster dose of vaccine after 9/1/2022. (For a small number of children, this included monovalent boosters for a series of weeks.) Updated guidance replaces previous guidance for individuals to receive multiple boosters based on age or medical condition.

No doses: This is an estimate based on subtracting the number of people who received at least one dose from the population estimate the specified population. It is possible for individuals to have received vaccine without it being reported to MIIS.

MIIS: Immunization data from most (but not all) providers in Massachusetts are reported into the Massachusetts Immunization Information System (MIIS) through direct messages from electronic health records or direct entry by users. Due to inputting and processing, it may take 24-48 hours or more for administration data to appear in MIIS. MIIS data are available for analysis one calendar day after they are reported to the MIIS. Data are current as of time of publication and may be subject to change in future publications as additional data are reported.

For more information on COVID-19 vaccines, visit the CDC's website at: <https://www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date.html>
