The popular Western Shelter System 1935 Gatekeeper is known for its large operational footprint, which makes the shelter an ideal component of both stand alone operations and large scale interoperable systems. This shelter system contains the accessories needed to rapidly deploy a fully functioning system complete with wiring and lighting harnesses, stakes and tie down straps and vestibule connection for the integration of additional shelters. This shelter system can be rapidly deployed in the field to meet any need from an operations center, community outreach and mobile medical initiatives.
