4. If receipt of power is at a substation indicate ownership in column (e), thus: respondent owned or leased, RS; seller owned or leased, SS.

5. If a fixed number of kilowatts of maximum demand is specified in the power contract as a basis of billing, this number should be shown in column (f). The number of kilowatts of maximum demand to be shown in columns (g) and (h) should be actual based on monthly readings and

should be furnished whether or not used in the determination of demand charges. Show in column (i) type of demand reading (instantaneous, 15, 30, or 60 minutes integrated).

6. The number of kilowatt hours purchased should be the quantities shown by the power bills.

7. Explain any amount entered in column (n) such as fuel or other adjustments.

MONTHLY PEAKS AND OUTPUT

1. Report hereunder the information called for pertaining to simultaneous peaks established monthly (in kilowatts) and monthly output (in kilowatt-hours) for the combined sources of electric energy of respondent.

2. Monthly peak col. (b) should be respondent's maximum kw load as measured by the sum of its coincidental net generation and purchase plus or minus net interchange, minus temporary deliveries (not interchange) of emergency power to another system. Monthly peak including such emergency deliveries should be shown in a footnote with a brief explanation

as to the nature of the emergency.

3. State type of monthly peak reading (instantaneous 15, 30, or 60 minutes integrated.)

4. Monthly output should be the sum of respondent's net generation and purchases plus or minus net interchange and plus or minus net transmission or wheeling. Total for the year should agree with line 15 above.

5. If the respondent has two or more power systems not physically connected, the information called for below should be furnished for each system.

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
 2. Substations which serve but one industrial or street railway customer should not be listed hereunder.
 3. Substations with capacities of less than 5000 kva, except those serving customers with energy for resale, may be grouped according to functions, but the number of such substations must be shown.

4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended.
 5. Show in columns (f), (g), and (h) special equipment such as rotary converters, rectifiers, condensers, etc. and auxiliary equipment for increasing capacity.
 6. Designate substations or major items of equipment leased from others, jointly owned with others, or operated otherwise than by reason of sole ownership by the respondent. For any substation or equipment operated under lease, give name of lessor, date and period of lease and annual rent. For any substation or equipment operated other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of sharing expenses of other accounting between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner or other party is an associated company.

CHESTER MUNICIPAL ELECTRIC LIGHT DEPARTMENT
PURCHASED POWER COST ADJUSTMENT CHARGE SCHEDULE

When so stated in the electric rate schedule, there shall be included a Purchased Power Adjustment Charge, in addition to the other charges, representative of the purchased power charges paid by the Chester Municipal Electric Light Department (CMELD).

The Purchased Power Cost Adjustment Charge (PCA) rate per kilowatt-hour shall be computed quarterly by utilizing the projected total cost of purchased power to be paid by the CMELD to its suppliers for the next quarter, adjusted for the avoided cost due to the projected receipt of NYPA power and adjusted for the previous quarter's cost recovery, divided by the total kilowatt-hours of energy anticipated to be billed by the CMELD for the period. The Purchased Power Cost Adjustment Charge factor will be calculated to the nearest thousandth of a mil (\$.000001) in the following manner:

$$\text{PCA} = \frac{\text{(A)}}{\text{(B)}} \text{ minus (C) where}$$

- (A) is the projected purchased power cost to be charged to Account 555 for the next quarter, adjusted for the calculated avoided cost of NYPA power;
- (B) is the estimated kilowatt-hours to be sold during the quarter
- (C) is the base period cost of purchased power per kilowatt-hour sold of \$0.09081 per kilowatt-hour.

An adjustment to the purchased power charge will be made to reflect the difference between estimated and actual purchased power costs and kilowatt-hours sold for the prior quarter in order to recover any under collection or credit any over collection of purchased power costs.

Date Effective: February 1, 2010
