NOTES:
(See Dwg. No. 4.2.20 for Notes to be included on the Construction Drawings)

STAGE CONSTRUCTION DETIAL
SCALE: 1\frac{1}{2}" = 1'-0"

NOTES:
1. The use of 6" (Min.) deck slab is required for the temporary concrete bridge barrier installation for staged construction. In these situations, the drilling into the top \( \frac{3}{4} \)" of the precast beam will be allowed to provide for the required by the crash test \( \frac{6}{2} \)" embedment length for anchor bolts.
2. The thickness of the deck slab may need to be increased to accommodate roadway profile.
