A Profile of Health Among Massachusetts Middle and High School Students, 2011

Results from the Massachusetts Youth Health Survey (MYHS)

Health Survey Program
Division of Research and Epidemiology
Bureau for Health Information, Statistics, Research, and Evaluation
Massachusetts Department of Public Health

June 2012
June 2012

Dear Colleagues, Parents, and Students:

The Massachusetts Departments of Public Health (DPH) is pleased to present the results of the 2011 Massachusetts Youth Health Survey (MYHS). This report features significant enhancements; one of which is the inclusion of key findings by race, ethnicity and gender and the identification of disparate (unequal) outcomes. This is particularly relevant to the work of the MDPH and Executive Office of Health and Human Services (EOHHS) since we share as a top priority the elimination of health disparities and promotion of health equity.

This survey was administered in a random sample of 137 public secondary schools by the University of Massachusetts Center for Survey Research in the spring of 2011. The following report presents key indicators of the behavioral and health risks reported by middle school and high school youth.

This report provides important information about behaviors and conditions that may compromise the health, safety, and wellbeing of young people across the Commonwealth. These behaviors include tobacco, alcohol, and other drug use; behaviors leading to injuries, such as drinking and driving and poor seatbelt use, dietary behaviors and physical inactivity; and sexual behaviors that may lead to sexually transmitted disease or pregnancy. The report also discusses the prevalence of health-related conditions such as obesity, chronic disease, oral health problems, and mental health concerns among our youth. The race/ethnicity data presented in this report may be used as a state benchmark and as a reference point for town surveys.

It is our hope that the data gathered through this survey and presented here can be utilized by schools, community programs, healthcare workers and families to better understand and address the health risks that our youth face and to promote the health of all young people in Massachusetts.

Thank you for your own continued commitment to improving the lives and health of youth in Massachusetts.

Sincerely,

John Auerbach
Commissioner
Department of Public Health
ACKNOWLEDGEMENTS

The staff of the Health Survey Program prepared this report:

Diane Gonsalves, MS, MPH, Epidemiologist
Maria McKenna, MPH, Epidemiologist
Helen Hawk, PhD, Director
Liane Tinsley, MPH, Senior Epidemiologist

We wish to express our gratitude to the students and faculty in the Massachusetts public schools who participated in this survey and to Anthony Roman at the Center for Survey Research of the University of Massachusetts-Boston and the dedicated administrators who helped make this survey possible. We wish to thank Carol Goodenow and Chiniqua Milligan at the Massachusetts Department of Elementary and Secondary Education whose collaborative efforts made these surveys possible. We also wish to acknowledge the contributions of the staff of the many programs within the Massachusetts Department of Public Health who provided topical overviews and reviewed draft sections of this report relevant to their areas of expertise.

For further information about this report, about the Massachusetts Youth Health Survey, or the Health Survey Program, please contact: Helen Hawk, Health Survey Program, Bureau of Health Information, Statistics, Research and Evaluation, Massachusetts Department of Public Health, 250 Washington Street, 6th floor, Boston, MA 02108-4619. INTRODUCTION

The following report is the first in-depth analyses of health risk behaviors for both middle and high school youth in Massachusetts. The report presents comparative descriptive analyses of health risks and health behaviors by sex, race/ethnicity, and grade of middle and high school students, as well as cross-tabulations and charts depicting associations between health behaviors and risk factors such as smoking and poor academic performance. It provides a picture of the current health behaviors of Massachusetts students with the goal of identifying high risk population groups with a particular focus on race/ethnicity disparities. It aims to assess the association between certain health behaviors and the demographical structure of student populations. It follows and compares the health behaviors for middle and high school students. The information obtained in these surveys assists in identifying the need for youth programs, interventions and health policies.

This report contains findings from the 2011 administration of the middle and high school Massachusetts Youth Health Survey (MYHS) and selected findings from a combined high school sample of identical MYHS and Massachusetts Youth Risk Behavior Survey (MYRBS) variables. In 2011, 54 high schools participated in both surveys, with 2,642 students completing the MYHS high school survey and 2,729 different students completing the MYRBS. Eighty-three middle schools participated in 2011, with 3,554 students completing the MYHS middle school survey (the MYRBS is not administered in middle schools). Surveys were administered in schools between the months of January and May of 2011.

With the cooperation of the Department of Elementary and Secondary Education (DESE), the Massachusetts Department of Public Health (DPH) has been able to conduct the MYHS every two years simultaneously with the MYRBS since 2007. Prior to 2007, the MYRBS and MYHS were conducted separately. The MYRBS has been conducted in Massachusetts every odd numbered year since 1993. The MYHS began at DPH as a survey focused on drug, alcohol and tobacco use among sixth through twelfth grade students. In 2003, the survey was changed to incorporate more health issues such a diet, mental health, personal safety, and other general health concerns. In 2004, it was named the Massachusetts Youth Health Survey and was conducted by The Center for Survey Research of the University of Massachusetts-Boston (CSR). After 2004, discussions between DPH and DESE began about consolidating the two surveys and starting in 2007, CSR began administering both. Joint reports from DESE and DPH were released on the 2007 and 2009 findings, and will be released again for 2011. The 2011 joint report focuses on MYRBS results with trend data for MYRBS 2003-2011 and it is shorter in length than the present report.
METHODOLOGY

Sample and Participation
Both the MYHS and MYRBS high school surveys utilized a two-stage sampling method to produce a representative sample of all public school students in Massachusetts in grades nine through twelve. Fifty-four high schools participated in the administration of both surveys, with 2642 students completing the MYHS and 2729 different students completing the MYRBS. The overall response rates (i.e., the school response rate multiplied by the student response rate) were 69.2% for the high school MYHS and 69.1% for MYRBS.

For the MYHS middle school survey, a similar sampling method was used. Two classes from each participating school were randomly selected to complete the survey. Data was collected from 3,554 students in grades six through eight in 83 schools. The overall response rate for the middle school MYHS was 62.7%.

There were 28 questions that were identical on the high school YHS and YRBS. A combined file of these 28 questions was created and utilized for analyses where possible throughout this report. The advantage of the combined sample includes the doubled sample size and increased power of analysis, allowing for analyses that may not have been possible with a smaller sample. A more detailed description of the sampling method and participation, as well as the steps taken to combine and re-weight the data are described in Appendix 1.

Analysis and Statistics Presented
The statistics presented in this report are weighted (i.e., adjusted for nonresponse and distribution of students by grade, sex and race/ethnicity) in order to be representative of Massachusetts public high school and middle school students as a whole. For a more detailed explanation of the weighting and variance estimation used, please refer to Appendix 1.

Data presented in this report for high school students are from the MYHS unless otherwise noted, in which case the data are from a combined high school sample of identical MYHS and MYRBS variables.

As seen in Appendices 2-4, many questions have several response options. Where applicable, response options with a positive response were grouped as ‘Yes’ and response options with a negative response were grouped as ‘No’. The underlying sample size (N) in each cell of the presented tables is the number of people who answered “Yes” or “No” to the corresponding question. The crude proportion is a weighted ratio of those who answered “Yes” to the corresponding question versus all who responded to the question. Those who responded “Don’t know” or refused to respond to a question were excluded from the analysis of that question unless otherwise noted.

The data presented here are univariate, descriptive percentages. No multivariate analysis was performed on these data. In addition, all data presented here are cross-sectional and thus this report contains no inferences about causality.

The 95% confidence interval (95% CI) is a range of values determined by the degree of variability of the data within which the true value is likely to lie. The confidence interval indicates the precision of a calculation; the wider the interval the less precision in the estimate. The 95% confidence intervals used in this report for crude percentages are the indicators of reliability (or stability) of the estimate. Smaller population subgroups or smaller numbers of respondents yield less precise estimates.

Suppression of the presented estimates:
   a) Estimates and their 95% confidence intervals are not presented in the tables if the underlying sample size is less than 50 respondents.
b) Following recommendations of the National Center for Health Statistics, data are not presented in the tables if a ratio of standard error to the estimate itself exceeds 30% (relative standard error of greater than 30%). Standard error of the estimate is a measure of its variability. Bigger standard errors yield wider confidence intervals and less reliable estimates.²

**Statistical significance** (at the 95% probability level) was considered as a basis when we used the terms “more likely”, “less likely”, “about the same”, “increase” or “decrease.” We considered the difference between two percentages to be statistically significant (with 95% probability) if the 95% confidence intervals surrounding the two percentages do not overlap, which is a conservative estimation for determining statistical significance.³ Descriptions in the text refer mainly to statistically significant differences, unless otherwise noted. In some instances, which are noted, differences between percentages were not significant but are reported as a matter of epidemiological importance.

**Race-ethnicity categories** in this report include White, Black, Hispanic, Other and Multiracial. When referring to White, Black, Other or Multiracial, these categories include only non-Hispanic respondents. All respondents reporting Hispanic ethnicity are included in the Hispanic category regardless of race. The Other category includes American Indian or Alaska Natives, Asian, and Hawaiian or Pacific Islander. The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino. The most common Multiracial combinations among students were White and American Indian or Alaska Natives, White and Asian, and White and Black.

**Shaded cells** in all tables refer to non-applicable grade levels.
SUMMARY OF KEY FINDINGS

Middle School Students

Academic Performance
- Overall, 3% of middle school students reported receiving mostly D’s or F’s for grades in the past year.

Substance Abuse
- Hispanic students were twice as likely as White students to have used alcohol in their lifetime (35% vs. 17%).
- Students were more likely to report lifetime alcohol use if they believed most people their age also drank alcohol (45% vs. 12%).

Nutrition, Physical Activity and Weight
- Overall, middle school students were more likely than high school students to report eating three or more servings of fruits or vegetables on the day prior to the survey (67% vs. 58%).
- Just over half of middle school students (53%) reported drinking one to two sugar-sweetened beverages on the previous day.

Disability and Chronic Conditions
- Black and Hispanic students were more likely than White students to report that they had asthma (28%, 26% vs. 17%).

Personal Safety
- Students who received grades of mostly D’s and F’s were over five times more likely to report never or rarely wearing a seatbelt than students who received grades of mostly A’s, B’s, and C’s (31% vs. 6%).

Violence-Related Behaviors and Experiences
- Female students were twice as likely as male students to report being a victim of cyber-bullying (19% vs. 9%).

Mental Health and Suicide
- Hispanic students were more likely to have seriously considered suicide than White students (14% vs. 5%).

High School Students

Academic Performance
- Overall, 7% of high school students reported receiving mostly D’s or F’s for grades in the past year.
- Black (11%) and Hispanic (13%) students were more likely than White (5%) students to receive mostly D’s or F’s for grades in the past year.

Substance Abuse
- Students were more likely to report lifetime alcohol use if they believed most people their age also drank alcohol (76% vs. 30%).
- White (15%) students were more likely to report current cigarette smoking than Black (7%) and Hispanic (9%) students.
- Males were six times more likely than high school females to report use of smokeless tobacco (22% vs. 3%).
- More students report current use of marijuana than current use of cigarettes (27% vs. 13%).

Nutrition, Physical Activity and Weight
- Just over half of students (54%) reported drinking one to two sugar-sweetened beverages on the previous day.
- Males were twice as likely as females to be obese (14% vs. 7%); however, no gender difference was seen in those who were overweight (15% vs. 14%). Both overweight and obese defined by BMI percentiles for age and sex.

Disability and Chronic Conditions
- Hispanic students were more likely than White students to report that they had asthma (31% vs. 23%).

Personal Safety
- Male students participating in sports were more likely than females participating in sports to report they had experienced symptoms of a sports-related traumatic brain injury in the past year (24% vs. 18%).

Violence-Related Behaviors and Experiences
- White students were more likely to be victims of cyber-bullying than Hispanic students (17% vs. 12%).

Mental Health and Suicide
- White females (9%) were the least likely to consider suicide compared to Black (17%), Hispanic (17%), and Other/Multiracial (17%) females.

Sexual Behavior
- Just over half of students (55%) reported that they had never had sexual intercourse.
DEMOGRAPHICS

All respondents were asked to indicate (1) what grade they were in (2) how old they were (3) their gender (4) if they were Hispanic or Latino and (5) what their race was, with the option of choosing more than one race. Response options for race included American Indian or Alaskan Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander and White. Race categories were subsequently collapsed into White non-Hispanic, Black non-Hispanic, Hispanic, Other non-Hispanic which included American Indian or Alaskan Native, Asian, and Native Hawaiian or Other Pacific Islander and Multiracial non-Hispanic. See Appendix 2 questions 1-3 and 6-7, Appendix 3 questions 1-3 and 6-7, and Appendix 4 questions 1-5 for the exact wording of these questions.

Presented here are the percentages of middle and high school students by sex, grade and race.

The combined high school sample was used to present the high school demographic characteristics.

| Table 1: Demographic Characteristics of Massachusetts Youth, YHS + YRBS 2011 |
|-----------------------------|-----------------------------|-----------------------------|
|                             | Middle School               | High School                 |
|                             | N  | %  | 95% CI          | N  | %  | 95% CI          |
| Overall                     | 3554 | 100.0 |                      | 5371 | 100.0 |                      |
| Sex                         |     |     |                  |     |     |                  |
| Male                        | 1779 | 51.0 | 49.2 - 52.8      | 2717 | 50.8 | 49.1 - 52.5      |
| Female                      | 1693 | 49.0 | 47.2 - 50.8      | 2620 | 49.2 | 47.5 - 50.9      |
| Grade                       |     |     |                  |     |     |                  |
| 6th grade                   | 1108 | 33.1 | 25.7 - 40.5      |     |     |                  |
| 7th grade                   | 1199 | 33.7 | 28.3 - 39.0      |     |     |                  |
| 8th grade                   | 1224 | 33.2 | 27.3 - 39.1      |     |     |                  |
| 9th grade                   |     |     |                  | 1330 | 26.9 | 22.9 - 30.9      |
| 10th grade                  |     |     |                  | 1355 | 25.3 | 21.2 - 29.5      |

| 12th grade                  |     |     |                  | 1360 | 23.4 | 19.2 - 27.5      |
| Race/Ethnicity*             |     |     |                  |     |     |                  |
| White                       | 2222 | 69.0 | 63.0 - 75.0      | 3600 | 70.1 | 65.0 - 75.1      |
| Black                       | 212  | 8.2  | 5.4 - 10.9       | 354  | 8.8  | 6.6 - 11.0       |
| Hispanic                    | 481  | 15.2 | 11.4 - 18.9      | 770  | 13.9 | 10.5 - 17.3      |
| Other                       | 242  | 4.7  | 3.4 - 6.0        | 321  | 4.5  | 3.3 - 5.6        |
| Multiracial                 | 146  | 2.9  | 2.4 - 3.5        | 215  | 2.8  | 2.4 - 3.2        |

* Students were allowed to indicate multiple race categories. White, Black, Other and Multiracial categories refer to non-Hispanic. If Hispanic/Latino was indicated as an ethnic identification, the student was categorized as Hispanic/Latino regardless of race category. The Other category includes American Indian or Alaska Natives, Asian, Hawaiian or Pacific Islander. The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino. The most common Multiracial combinations among middle school students were, White and American Indian or Alaska Natives (35%), White and Asian (23%), and White and Black (16%). The most common combinations among high school students were White and Black (26%), White and American Indian or Alaska Natives (26%), and White and Asian (17%).

(a) Combined sample MYHS + MYRBS.

Middle School
- The Other category included 45 American Indian or Alaska Natives, 184 Asian, and 13 Hawaiian or Pacific Islander students.

High School
- The Other category included 34 American Indian or Alaska Natives, 254 Asian, and 33 Hawaiian or Pacific Islander students.
ACADEMIC PERFORMANCE

Adolescents’ academic achievement is strongly linked to their health. Health-related factors can lead to poor academic performance. Health-risk behaviors such as early sexual initiation, violence, and physical inactivity have been consistently linked to poor grades.4

All students were asked to describe their grades in school during the past 12 months. Response options included ‘Mostly A’s’, ‘Mostly B’s’, ‘Mostly C’s’, ‘Mostly D’s’, ‘Mostly F’s’, and ‘none of these grades’. See Appendix 2 question 8, Appendix 3 question 8, and Appendix 4 question 8 for the exact wording of the question.

Presented here are:
1. The percentage of students who reported receiving each of these grades in the past year
2. The percentage of students who reported receiving mostly D’s or F’s for grades in the past year

The combined high school sample was used to present the high school academic performance results.

| Grades in past year | Middle School | | | High School a | | |
|---------------------|--------------|------------------|-----------------|------------------|------------------|
|                     | N        | %     | 95% CI      | N        | %     | 95% CI      |
| Mostly A’s          | 1566    | 45.1  | 41.5 - 48.7 | 1416    | 26.0  | 23.4 - 28.6 |
| Mostly B’s          | 1210    | 35.3  | 33.1 - 37.5 | 2340    | 43.5  | 41.7 - 45.2 |
| Mostly C’s          | 388     | 11.5  | 9.8 - 13.1  | 1020    | 19.9  | 17.8 - 21.9 |
| Mostly D’s          | 76      | 2.2   | 1.6 - 2.9   | 224     | 4.6   | 3.7 - 5.4   |
| Mostly F’s          | 34      | 1.0   | 0.5 - 1.4   | 105     | 2.2   | 1.5 - 2.8   |
| None of these grades| 5       | 0.2   | 0.0 - 0.4   | 24      | 0.4   | 0.2 - 0.6   |
| Not sure            | 158     | 4.8   | 3.8 - 5.8   | 176     | 3.5   | 2.8 - 4.2   |

* Students were allowed to indicate multiple race categories. White, Black, Other and Multiracial categories refer to non-Hispanic. If Hispanic/Latino was indicated as an ethnic identification, the student was categorized as Hispanic/Latino regardless of race category. The Other category includes American Indian or Alaska Natives, Asian, Hawaiian or Pacific Islander. The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino. (a) Combined sample MYHS + MYRBS. † Insufficient data

**Middle School**
- Males were over twice as likely as females to have received mostly D’s or F’s for grades in the past year.

**High School**
- 9th and 10th grade students were more likely than 12th grade students to have received mostly D’s or F’s for grades in the past year.
- Black and Hispanic students were more likely than White students to have received mostly D’s or F’s for grades in the past year.
Alcohol use and binge drinking among our nation’s youth is a major public health problem. Among youth, the use of alcohol and other drugs has been linked to unintentional injuries, physical fights, academic and occupational problems, and illegal behavior.\textsuperscript{5}

A definition of ‘drinking alcohol’ was provided before the section began: ‘The next 7 questions ask about drinking alcohol. This includes drinking beer, wine, wine coolers, hard lemonade, hard cider, and liquor such as rum, gin, vodka, or whiskey. For these questions, drinking alcohol does not include drinking a few sips of wine for religious purposes’. All respondents were asked (1) how many days during their lifetime they had at least one drink of alcohol and (2) at what age they had their first drink of alcohol other than a few sips. These two variables were combined to create the lifetime alcohol use variable. Any student who reported any lifetime alcohol use was then asked on how many of the past 30 days they had at least one drink of alcohol and on how many of the past 30 days they had at least five drinks of alcohol in a row (to measure binge drinking). All respondents were also asked if they thought that most people their age drank alcohol. See Appendix 2 questions 35-41, Appendix 3 questions 35-41, and Appendix 4 questions 47-51 for the exact wording of these questions.

Presented here are

1. The percent of students who reported having at least one drink of alcohol in their lifetime
2. The number of days in the past month students had at least one drink of alcohol
3. The percentage of students who reported binge drinking in the past 30 days
4. The percentage of students who believe most people their age drink alcohol by lifetime alcohol use

The combined high school sample was used to present lifetime alcohol use, current alcohol use, and binge drinking. YHS high school data was used to present the percentage of students who believe most people their age drink alcohol stratified by lifetime alcohol use.

* Students were allowed to indicate multiple race categories. White, Black, Other and Multiracial categories refer to non-Hispanic. If Hispanic/Latino was indicated as an ethnic identification, the student was categorized as Hispanic/Latino regardless of race category. The Other category includes American Indian or Alaska Natives, Asian, Hawaiian or Pacific Islander. The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino.

(a) Lifetime alcohol use was defined as the percent of respondents who indicated that they had at least one drink of alcohol on one or more days in their lifetime.

(b) Combined sample MYHS + MYRBS.

**Middle School**
- Lifetime alcohol use increased by grade level. 8<sup>th</sup> grade students were over four times as likely as 6<sup>th</sup> grade students to have used alcohol in their lifetime.
- Hispanic and Multiracial students were more likely than White students to have used alcohol in their lifetime.

**High School**
- Lifetime alcohol use increased by grade level.
- Students of ‘Other’ race were less likely to have used alcohol in their lifetime than students of any other race/ethnicity.
Figure 1: Number of Days in the Past Month Massachusetts Youth Had at Least One Drink of Alcohol, YHS + YRBS 2011

Middle School
- 91% of students reported that they had not used alcohol in the past 30 days.
- 6% of students reported using alcohol on 1-2 days, 2% on 3-9 days and 1% on 10-30 days in the past month.

High School
- 59% of students reported that they had not used alcohol in the past 30 days.
- 21% of students reported using alcohol on 1-2 days, 16% on 3-9 days and 4% on 10-30 days in the past month.

Binge Drinking (defined as having 5 or more drinks in a row)
- Overall, 2.8% of middle school students and 22.7% of high school students (in the combined sample) reported binge drinking in the past 30 days.
- There were no significant differences observed between males and females.
Research from the National Institute on Alcohol Abuse and Alcoholism (NIAAA) has shown that ‘the most reliable predictor of a youth’s drinking behavior is the drinking behavior of his or her friends’. This is of particular importance for youth in middle school and high school since wanting to be accepted by peers becomes a central role in teenagers’ lives. Studies have shown that since teenagers’ brains are still developing, it makes it more difficult for them to stand up to peer pressure. The chart below shows that students who think most people their age drink alcohol are more likely to drink themselves.

![Figure 2: Lifetime Alcohol Use by the Belief that Most People Their Age Drink Alcohol, YHS 2011](chart)

*Significant difference between students that thought most people their age drank and those that did not.

**Middle School**
- Overall, 25% of students believed that most people their age drank alcohol.
- Students who thought most people their age drank alcohol were over three times more likely to report lifetime alcohol use than those who did not think most people their age drank.

**High School**
- Overall, 85% of students believed that most people their age drank alcohol.
- Students who thought most people their age drank alcohol were over two times more likely to report lifetime alcohol use than those who did not think most people their age drank.
TOBACCO USE

Tobacco use, including cigarette smoking, cigar smoking, and smokeless tobacco use, remains the leading preventable cause of death in the United States. Each day in the United States, approximately 3,600 young people between the ages of 12 and 17 years initiate cigarette smoking, and an estimated 1,100 young people become daily cigarette smokers.\(^7\)

All respondents were asked if they had ever tried smoking cigarettes, even one or two puffs. All respondents were then asked about how many cigarettes they smoked in their entire life. Any student who answered that they smoked part of a cigarette or one or more whole cigarettes was then asked (1) how many days they smoked cigarettes during the past 30 days (used to measure current smoking) and (2) how they usually got their own cigarettes during the past 30 days. All respondents were asked if they had ever used chewing tobacco, snuff, or dip, such as Redman, Levi Garrett, Beechnut, Skoal, Skoal Bandits or Copenhagen, which was used to calculate lifetime smokeless tobacco use. See Appendix 2 questions 65-80, Appendix 3 questions 65-80, and Appendix 4 questions 39-41 for the exact wording of these questions.

Presented here are

1. The percentage of students that currently smoke cigarettes
2. The percentage of students that ever used smokeless tobacco by gender
3. The methods that students used to obtain cigarettes during the past 30 days

*The combined high school sample was used to present current cigarette smoking. YHS high school data was used to present smokeless tobacco by gender and methods used to obtain cigarettes.*

(a) Current cigarette smoking was defined as the percent of respondents that answered that they had smoked cigarettes on 1 or more of the past 30 days
(b) Combined sample MYHS + MYRBS.
† Insufficient data.

Middle School
- 6th grade students were less likely to report current cigarette smoking than either 7th or 8th grade students.
- Multiracial students were more likely than White students to report current cigarette smoking.

High School
- 12th grade students were more likely than 9th and 10th grade students to report current cigarette smoking.
- White students were more likely than Black and Hispanic students to report current cigarette smoking.
Figure 3: Percentage of Lifetime Smokeless Tobacco Use by Gender Among Massachusetts Youth, YHS 2011

Middle School
- Males were over three times more likely than females to report ever using smokeless tobacco.

High School
- Males were six times more likely than high school females to report ever using smokeless tobacco.

(a) This question was asked of students who had ever tried cigarette smoking. Those who selected the response option ‘I did not smoke cigarettes during the past 30 days’ were not included in the analysis.
(b) Respondents were only allowed to choose one method.
† Insufficient data.

Middle School
- No significant differences were observed.

High School
- Students who smoked during the past 30 days were more likely to buy cigarettes at a store.
**DRUG USE**

Marijuana is the most commonly used illegal drug among youth in the United States. While illicit drug use among youth has declined in recent years, rates of nonmedical use of prescription and over-the-counter medication remain high. Prescription medications most commonly abused by youth include pain relievers, tranquilizers, stimulants, and depressants.

All respondents were asked questions about their lifetime use of nine different categories of drugs, including marijuana, inhalants, heroin, cocaine, crack, amphetamines and methamphetamines, ecstasy, over-the-counter drugs and ‘drugs from prescriptions that weren’t your own’. Those respondents that answered ‘Yes’ to lifetime use for a drug, were then asked if they had used that drug in the past 30 days.

All respondents were additionally asked about their lifetime nonmedical use of specific prescription drugs, including narcotics, Ritalin, OxyContin, and steroids. All respondents were asked if they had ever taken any of those same prescription drugs nonmedically within the past 30 days.

Questions pertaining to any kind of drug were used to create the table on ‘any drug use’; questions about only nonmedical prescription drugs were used to create ‘any nonmedical prescription drug use’, and drug questions exclusive of nonmedical prescription drugs were used to calculate ‘any other drug use’.

See Appendix 2 questions 42-64 and Appendix 3 questions 42-64 for the exact wording of these questions.

Presented here are:
1. The percentage of students who used any drug during their lifetime
2. The percentages of students who used any nonmedical prescription drug or any other drug during their lifetime
3. The percentages of students who used any nonmedical prescription drug or any other drug during the past 30 days
4. The percentage of any lifetime drug use by smoking status

*All high school results represent YHS data, the combined sample was not used in this section.*

* Students were allowed to indicate multiple race categories. If Hispanic/Latino was indicated as an ethnic identification, the student was categorized as Hispanic/Latino regardless of race category. The Other category includes American Indian or Alaska Natives, Asian, Hawaiian or Pacific Islander. The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino.

(a) Any lifetime drug use was defined as the percent of respondents who indicated that they had ever used one or more of the following drugs: marijuana, inhalants, heroin, cocaine, crack, amphetamines/methamphetamines, ecstasy, over-the-counter medication, narcotics, Ritalin, OxyContin, steroids, or other drugs from prescriptions that were not their own. To be considered as ‘not using any drugs in their lifetime’, respondents had to answer ‘No’ to every drug question. Respondents who answered ‘No’ to most drug questions but had ‘missing’ responses for other questions were excluded from the analysis.

Middle School
- Any lifetime drug use increased with grade level.
- White students were only half as likely as Hispanic or Multiracial students to report any lifetime drug use.

High School
- 9th grade students were the least likely to report any lifetime drug use compared to students in all other high school grades.
- There were no significant differences found by race/ethnicity.

Any Current Drug Use
Middle School
- Current drug use increased with grade level from 3% to 10%.
- White students were only half as likely as Hispanic students to report any current drug use.

High School
- Current drug use increased with grade level from 22% to 38%.
- There were no significant differences found by race/ethnicity.

(a) Any nonmedical prescription drug use included use of Ritalin, OxyContin, narcotics, steroids, or drugs from prescriptions that were not their own.
(b) Any other drug use included use of marijuana, heroin, cocaine, crack, inhalants, ecstasy, amphetamines/methamphetamines or over-the-counter medication taken to get high. Subcategories may overlap.
(c) To be considered as ‘not using any nonmedical prescription drugs in their lifetime’ or ‘not using any other drugs in their lifetime’, respondents had to answer ‘No’ to every respective drug question. Respondents who answered ‘No’ to most drug questions but had ‘missing’ responses for other questions were excluded from the analysis.
(d) Percentages for the remaining drug categories for middle school students were 4% or lower.
(e) Percentages for the remaining drug categories for high school students were 6% or lower.

- 5% of middle school students and 17% of high school students reported nonmedical use of a prescription drug during their lifetime.
- Marijuana was the most commonly used drug among both middle and high school students during their lifetime. Nearly half of high school students reported using marijuana during their lifetime.
- 8% of high school students reported lifetime nonmedical use of over-the-counter medication.
- 5% of both middle and high school students reported lifetime use of inhalants to get high.

(a) Any drug use included use of one or more of the following drugs: marijuana, inhalants, heroin, cocaine, crack, amphetamines/methamphetamines, ecstasy, over-the-counter medication, narcotics, Ritalin, OxyContin, steroids, or other drugs from prescriptions that were not their own.

(b) Any nonmedical prescription drug use included use of Ritalin, OxyContin, narcotics, steroids, or drugs from prescriptions that were not their own.

(c) Any other drug use included use of marijuana, heroin, cocaine, crack, inhalants, ecstasy, amphetamines/methamphetamines, or over-the-counter medication taken to get high. Subcategories may overlap.

(d) To be considered as ‘not using any drugs in past 30 days’ or ‘not using any nonmedical prescription drugs in past 30 days’ or ‘not using any other drugs in past 30 days’, respondents had to answer ‘No’ to every respective drug question. Respondents who answered ‘No’ to most drug questions but had ‘missing’ responses for other questions were excluded from the analysis.

(e) Current use was defined as use within the past 30 days and was calculated as a percent of all survey respondents.

(f) Percentages for the remaining drug categories for middle school students were less than 1%.

(g) Percentages for the remaining drug categories for high school students were 5% or lower.

- 7% of middle school students and 30% of high school students reported current use of any drug.
- 7% of high school students reported nonmedical use of any prescription drug during the past 30 days.
- Marijuana was the most commonly used drug in the past 30 days, among both middle and high school students. Among high school students, more students reported current use of marijuana than current use of cigarettes (27% vs. 13%).
- 4% of high school students reported nonmedical use of over-the-counter medication in the past 30 days.
- 2% of both middle and high school students reported current use of inhalants to get high.
It has been shown that teen smoking is an early warning sign for additional substance abuse. Substance Abuse and Mental Health Services Administration (SAMHSA) research shows that youth age 12-17 who smoke are more than 11 times as likely to use illicit drugs and 16 times as likely to drink heavily as youths who do not smoke. The figure below illustrates the difference in lifetime drug use between current smokers and those who have never smoked.

![Figure 4: Percentage of Any Lifetime Drug Use by Smoking Status Among Massachusetts Youth, YHS 2011 a,b](image)

(a) Any lifetime drug use was defined as the percent of respondents who indicated that they had ever used one or more of the following drugs: marijuana, inhalants, heroin, cocaine, crack, amphetamines/methamphetamines, ecstasy, over-the-counter medication, narcotics, Ritalin, OxyContin, steroids, or other drugs from prescriptions that were not their own. To be considered as ‘not using any drugs in their lifetime’, respondents had to answer ‘No’ to every drug question. Respondents who answered ‘No’ to most drug questions but had ‘missing’ responses for other questions were excluded from the analysis.

(b) Current smoker was defined as the percent of respondents that answered that they had smoked cigarettes on 1 or more of the past 30 days. Never smoker was defined as the percent of respondents that reported never trying a cigarette, not even one or two puffs.

* Significant difference between current smoker and never smoker.

Middle School
- Current smokers were over ten times more likely than never smokers to report using any drug in their lifetime.

High School
- Current smokers were nearly three times more likely than never smokers to report using any drug in their lifetime.
Healthy eating in childhood and adolescence is important for proper growth and development and can prevent health problems such as obesity, dental caries, and iron deficiency. Most youth in the United States do not meet the recommendations for eating 2 ½ cups to 6 ½ cups of fruits and vegetables each day. In addition, most adolescents drink more full-calorie soda per day than milk.⁹

All respondents were asked to indicate (1) how many times they ate vegetables on the previous day (2) how many times they ate fruit or drank 100% fruit juice on the previous day (3) how many cans or glasses of non-diet soda they drank on the previous day and (4) how many cans or glasses of flavored drinks they drank on the previous day. The definition of vegetables was provided as ‘all cooked and uncooked vegetables; salads; and boiled, baked and mashed potatoes’. They were asked to not count ‘French fries, potato chips, or lettuce that is on a sandwich or sub’. The definition of non-diet soda was provided as ‘a soda with sugar in it, such as Coke, Pepsi, Sprite, ginger ale, or root beer’. The definition of a flavored drink was provided as ‘punch, sports drinks, sweetened ice tea, and other fruit-flavored drinks like Kool Aid and Hawaiian Punch’ and ‘do not count 100% fruit juice’. Both beverage questions specified that a 20-ounce bottle should be counted as 2 glasses. Response options for the vegetable and fruit questions only went up to ‘3 or more times’. See Appendix 2 questions 15-18 and Appendix 3 questions 14-17 for the exact wording of these questions.

Presented below are:

1. The percentage of students that had a combined total of 3 or more fruits or vegetables on the previous day
2. The percentage of students that had any sugar-sweetened beverage on the previous day
3. The percentage of students who were obese by the number of sugar-sweetened beverages they consumed on the previous day

All high school results represent YHS data, the combined sample was not used in this section.

* Students were allowed to indicate multiple race categories. White, Black, Other and Multiracial categories refer to non-Hispanic. If Hispanic/Latino was indicated as an ethnic identification, the student was categorized as Hispanic/Latino regardless of race category. The Other category includes American Indian or Alaska Natives, Asian, Hawaiian or Pacific Islander. The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino. (a) 3 or more servings of fruits or vegetables was defined as the percent of respondents that had a combined total of 3 or more fruits or vegetables consumed on the previous day.

- Overall, middle school students were more likely than high school students to report eating three or more servings of fruits or vegetables on the day prior to the survey.

**Middle School**
- Black students were less likely than White students to have eaten three or more servings of fruits or vegetables on the day prior to the survey.

**High School**
- Hispanic students were less likely than White students to have eaten three or more servings of fruits or vegetables on the day prior to the survey.

(a) Any sugar-sweetened beverage includes non-diet soda and/or flavored drinks. Non-diet soda was defined in the question as ‘…a soda with sugar in it, such as Coke, Pepsi, Sprite, ginger ale, or root beer. Count a 20-ounce bottle as 2 glasses’. Flavored drinks were defined in the question as ‘…punch, sports drinks, sweetened ice tea, and other fruit-flavored drinks like Kool Aid and Hawaiian Punch. Do not count 100% fruit juice. Count a 20-ounce bottle as 2 glasses’.

- Just over half of both middle and high school students reported drinking one to two sugar-sweetened beverages on the previous day.
- Fifteen percent of both middle and high school students reported drinking three or more sugar-sweetened beverages on the previous day.
- There were no differences between middle and high school students when comparing the amount of sugar-sweetened beverages consumed on the day prior to the survey.
The 2010 Dietary Guidelines Advisory Committee states that there are strong data to support the conclusion that a greater intake of sugar-sweetened beverages is associated with increased adiposity in children.\textsuperscript{10} Evidence from longitudinal studies suggests that there is an association between sugar-sweetened beverage intake and weight or body mass index (BMI).\textsuperscript{11} The figure below examines the percent of students who report being obese by the number of sugar-sweetened beverages they consumed on the previous day.

\begin{itemize}
  \item Overall, this graph suggests that there is an increase in obesity as sugar-sweetened beverage consumption increases, although this increase is not statistically significant.
\end{itemize}
PHYSICAL ACTIVITY

Regular physical activity in childhood and adolescence improves strength and endurance, helps build healthy bones and muscles, helps control weight, reduces anxiety and stress, and increases self-esteem. In 2009, only 18% of high school students in the United States reported participating in at least 60 minutes per day of physical activity.12

All respondents were asked to indicate (1) on how many of the past 7 days they exercised or participated in physical activity for at least 20 minutes that made them sweat or breathe hard, such as basketball, soccer, running, swimming laps, fast bicycling, fast dancing or similar aerobic activities and (2) on how many of the past 7 days they were physically active for a total of at least 60 minutes per day (adding up all the time spent in any kind of physical activity that increased their heart rate and made them breathe hard some of the time).

Students that answered ‘7 days’ to the second question were considered to have met the new 2008 Physical Activity Guidelines for Americans recommendation of ‘60 minutes or more of physical activity each day’ for children.13 Among those students, respondents that additionally answered that they did vigorous activity for 20 minutes on 3 or more days were considered to have met the additional physical activity guideline of ‘including vigorous-intensity aerobic activity on at least 3 days per week’. The previous physical activity recommendation of 5 out of 7 days, reported in ‘Health and Risk Behaviors of Massachusetts Youth, 2009’ was taken from the 2005 Dietary Guidelines, which stated that children and adolescents should engage in at least 60 minutes of physical activity on most, preferably all, days of the week.14, 15

All respondents were asked how many days they walked, biked, rollerbladed, or rode a skateboard to get to school or get home from school during the past 5 school days.

All respondents in the High School survey were asked how many hours they spent watching television during the past 7 days, not including videos, DVDs, PlayStation or Nintendo. Sub-questions were listed for last Friday, Saturday, Sunday, and on average Monday through Thursday.

In the Middle School survey, the sub-questions about television watching included last Monday, Tuesday, Wednesday, Thursday, Friday, Saturday and Sunday. Middle School students were additionally asked how many hours they played video or computer games or used a computer for something that was not school work on an average school night (including Xbox, PlayStation, Nintendo DS, iPod touch, Facebook and the Internet).

See Appendix 2 questions 10-14, Appendix 3 questions 10-13 and Appendix 4 questions 92-93 for the exact wording of these questions.

Presented below are:

1. The percentage of students who met the 2008 guidelines for total physical activity in the past week
2. The percentage of students who met the 2008 guidelines for vigorous physical activity in the past week
3. The number of days students walked, biked or rode to or from school in the past 5 school days
4. The percentage of students who watched TV or played video games for 3 or more hours on each school day in the past week

The combined high school sample was used to calculate total physical activity and vigorous physical activity. YHS high school data was used to represent the number of days students walked to or from school and the percentage of students who watched TV or played video games for 3 or more hours each school day.

* Students were allowed to indicate multiple race categories. White, Black, Other and Multiracial categories refer to non-Hispanic. If Hispanic/Latino was indicated as an ethnic identification, the student was categorized as Hispanic/Latino regardless of race category. The Other category includes American Indian or Alaska Natives, Asian, Hawaiian or Pacific Islander. The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino.

(a) 'Physically active' was defined in the question as ‘…time you spent in any kind of physical activity that increases your heart rate and makes you breathe hard some of the time’.

(b) Combined sample MYHS + MYRBS.

Middle School
- Male students were more likely than female students to report physical activity for 60 minutes on all 7 days of the past week.
- Hispanic students were less likely than White students to report physical activity for 60 minutes on all 7 days of the past week.

High School
- Male students were twice as likely as female students to report physical activity for 60 minutes on all 7 days of the past week.
- There were no significant differences observed by grade level or race/ethnicity.
Among those who met the guideline for total physical activity, there was no difference by gender in the percent who also met the guideline for vigorous activity. Nearly all who met the guideline for total activity also met the guideline for vigorous activity.

Middle school
- Nearly two-thirds of students reported that they did not walk or bike to school on any of the past five days, while 19% of students reported all five days.

High School
- Over two-thirds of students reported that they did not walk or bike to school on any of the past five days, while 18% of students reported all five days.

</tr>
</tbody>
</table>

(a) Screen time was calculated as the percent of students who watched TV and/or played video games for 3 or more hours on each school day (Monday-Friday). Note: this was NOT calculated as an average.

(b) Question regarding computer and video games was only asked on the middle school survey and did not include computer use for school work.

**Middle School**
- Nearly two-thirds of middle school students were exposed to three or more hours of total screen time on each school day.

**High School**
- The percentage of students who watched 3 or more hours of TV on each school day was higher among high school students than middle school students.
WEIGHT AND WEIGHT CONTROL

Childhood obesity has more than tripled in the past 30 years. In 2008, more than one third of children and adolescents were overweight or obese. Obese youth are more likely to have risk factors for cardiovascular disease, pre-diabetes, and are at greater risk for social and psychological problems such as stigmatization and poor self-esteem.\textsuperscript{16}

All respondents were asked to indicate how tall they were and how much they weighed without their shoes on. Body Mass Index (BMI) was calculated using ‘A SAS Program for the CDC Growth Charts’ provided by the Centers for Disease Control and Prevention (CDC) which additionally provided the percentile for BMI adjusted for age and sex.\textsuperscript{17} Biologically implausible value edits were conducted to exclude outliers for height, weight and BMI. Biologically implausible values were excluded from the analysis as well as the respective BMI percentiles.

Overweight was defined as having a BMI percentile for age and sex greater than or equal to 85 but less than 95. Obese was defined as having a BMI percentile for age and sex greater than or equal to 95. Normal weight was defined as a BMI percentile for age and sex greater than or equal to 5 but less than 85.

All respondents were asked how they would describe their weight, with response options including very underweight, slightly underweight, about the right weight, slightly overweight and very overweight.

All respondents were asked if they had done any of the following things at least once to lose or maintain their weight in the past 30 days: (1) increase intake of fruits and vegetables (2) reduce the number of calories they ate (3) cut out between meal snacking (4) decreased their fat intake (5) exercise (6) fast (that is going 24 hours or more without eating) (7) vomit or throw up on purpose after eating (8) take diet pills without a doctor’s permission and (9) take laxatives. Students were asked to respond “Yes” or “No” to each behavior.

See Appendix 2 questions 4-5 and 90-91, Appendix 3 questions 4-5 and 94-95, and Appendix 4 questions 6-7 and 79 for exact wording of these questions.

Presented below are:
1. The percentage of students who were overweight
2. The percentage of students who were obese
3. The percentage of high school students who were obese by race and gender
4. The percentages of males and females who practiced healthy and unhealthy weight maintenance techniques
5. Students’ perception of their body weight stratified by BMI categories

The combined high school sample was used to analyze overweight, obese, obesity by race and gender, and perception of body weight by BMI categories. YHS high school data was used to analyze weight control behaviors.

</tbody>
</table>

(a) All respondents were asked ‘How would you describe your weight?’ with response options ‘very underweight’, ‘slightly underweight’, ‘about the right weight’, ‘slightly overweight’ and ‘very overweight’.

(b) Combined sample MYHS + MYRBS

- Among students who were normal weight, nearly one-third of students did not perceive themselves to be normal weight. 18% felt they were underweight and 12% felt they were overweight.

- Among students who were overweight, 40% of students did not perceive themselves to be overweight. 4% felt they were underweight and 37% felt they were normal weight.

- Among students who were obese, just over 16% of students did not perceive themselves to be overweight. 5% felt they were underweight and 12% felt they were normal weight.
ORAL HEALTH

Tooth decay (dental caries) affects children in the United States more than any other chronic infectious disease. Untreated tooth decay causes pain and infections that may lead to problems eating, speaking, playing, and learning.18

All respondents were asked if (1) they had been examined by a dentist in the past 12 months and if (2) they had a cavity in any tooth in the past 12 months.

All respondents were asked if they ever wore a mouth guard while playing on a sports team in the past 12 months. Those who did not play on a sports team were not included in the analysis.

See Appendix 2 questions 92-94 and Appendix 3 questions 96-98 for the exact wording of these questions.

Presented below are:
1. The percentage of students that reported being examined by a dentist in the past year
2. The percentage of students that had at least one cavity in the past year stratified by the number of sugar-sweetened beverages consumed on the previous day
3. The percentage of students who wore a mouth guard while playing sports stratified by gender

All high school results represent YHS data, the combined sample was not used in this section.

</table>

* Students were allowed to indicate multiple race categories. White, Black, Other and Multiracial categories refer to non-Hispanic. If Hispanic/Latino was indicated as an ethnic identification, the student was categorized as Hispanic/Latino regardless of race category. The Other category includes American Indian or Alaska Natives, Asian, Hawaiian or Pacific Islander. The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino.

Middle School

- White students were more likely to have been examined by a dentist in the past year than students of any other race/ethnicity except Multiracial.

High School

- White students were more likely than Black and Hispanic students to have been examined by a dentist in the past year.
Among both middle and high school students, those who drank three or more glasses of sugar-sweetened beverages were more likely to report having at least one cavity than students who drank zero glasses.

(a) Any sugar-sweetened beverage includes non-diet soda and/or flavored drinks. Non-diet soda was defined in the question as a ‘…soda with sugar in it, such as Coke, Pepsi, Sprite, ginger ale, or root beer. Count a 20-ounce bottle as 2 glasses’. Flavored drinks were defined in the question as ‘…punch, sports drinks, sweetened ice tea, and other fruit-flavored drinks like Kool Aid and Hawaiian Punch. Do not count 100% fruit juice. Count a 20-ounce bottle as 2 glasses’.

*Significant difference between 3 or more glasses and 0 glasses.
Among both middle and high school students, male students were more likely than female students to report wearing a mouth guard while playing on a sports team in the past year.
**DISABILITY AND CHRONIC CONDITIONS**

The School Health Policies and Programs Study (SHPPS) reported in 2006 that 75.7% of schools in the United States had students with long-term physical, medical, or cognitive disabilities. Asthma is a leading chronic illness among children and youth in the United States and is one of the leading causes of school absenteeism. Low-income populations, minorities and children living in inner cities experience more emergency department visits, hospitalizations, and deaths due to asthma than the general population. Diabetes is one of the most common chronic diseases among children in the United States. Reports of increasing frequency of both type 1 and type 2 diabetes in youth has been among the most concerning aspects of the evolving diabetes epidemic.

All respondents were asked if they had any physical disabilities or long-term health problems, with long-term defined as six months or more.

All respondents were asked if they were ever told by a doctor, nurse or other health care professional that they had asthma or diabetes.

See Appendix 2 questions 84-88, Appendix 3 questions 88-92, and Appendix 4 question 13 for the exact wording of these questions.

Presented below are:

1. The percentage of students with a physical disability or long-term health problem
2. The percentage of students who were ever diagnosed with asthma
3. The percentage of students who were ever diagnosed with diabetes

The combined high school sample was used to analyze physical disability or long-term health problem. YHS high school data was used to analyze asthma and diabetes.

† Insufficient data

**Middle School**
- No significant differences were observed.

**High School**
- Hispanic students were five times more likely than White students to report ever having been told by a doctor that they had diabetes.
PERSONAL SAFETY

Approximately 67% of all deaths among children and adolescents aged 5-19 years result from injury-related causes. Among children and adolescents aged 5 to 19 years, 68% of unintentional injury deaths are due to motor vehicle crashes. During the last decade, emergency department (ED) visits for sports- and recreation-related traumatic brain injuries (TBIs), including concussions, among children and adolescents increased by 60%. The activities associated with the greatest number of TBI-related ED visits include bicycling, football, playground activities, basketball, and soccer. As of July 2010, a concussion law became effective in Massachusetts requiring (1) coaches, trainers, parents and other adults involved with school activities to participate in annual concussion training (2) the removal of any athlete suspected of having a concussion from practice/game, and (3) not allowing those athletes to return to practice/game until being evaluated by a licensed physician.

All High School students were asked if they ever send text messages while driving a car. High school students who reported drinking alcohol in their lifetime were asked how many times they drove a car when they had been drinking alcohol in the past 30 days.

All Middle School students were asked how often they wore a seatbelt when riding in a car driven by someone else.

All respondents were asked if they suffered a blow or jolt to their head while playing on a sports team in the past year (either during a game or during practice) which caused them to get ‘knocked out’, have memory problems, double or blurry vision, headaches or ‘pressure’ in the head, or nausea or vomiting (i.e. symptoms of a possible traumatic brain injury or concussion).

All respondents were asked to indicate how they would describe their grades in school in the past 12 months.

See Appendix 2 questions 8 and 26-27, and Appendix 3 questions 25-26 and 40 for the exact wording of these questions

Presented below are:

1. The percentage of middle school students who reported never or rarely wearing a seatbelt while riding in a car
2. The percentage of middle school students who reported never or rarely wearing a seatbelt stratified by academic performance
3. The percentage of high school students who drove after drinking alcohol in the past 30 days
4. The percentage of high school students who ever sent text messages while driving
5. The percentage of students who participated in sports who also reported experiencing a blow to their head during sports in the past 12 months which was followed by symptoms of a traumatic brain injury (TBI)

All high school results represent YHS data, the combined sample was not used in this section.

* Students were allowed to indicate multiple race categories. White, Black, Other and Multiracial categories refer to non-Hispanic. If Hispanic/Latino was indicated as an ethnic identification, the student was categorized as Hispanic/Latino regardless of race category. The Other category includes American Indian or Alaska Natives, Asian, Hawaiian or Pacific Islander. The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino.

(a) Question refers to times when riding in a car driven by someone else.

- Hispanic students were four times more likely than White students to report never or rarely wearing a seatbelt.
- Black and ‘Other’ race students were also more likely than White students to report never or rarely wearing a seatbelt.
Middle school students who received grades of mostly D’s and F’s were over five times more likely to report never or rarely wearing a seatbelt than students who received grades of mostly A’s, B’s and C’s.

No significant differences were seen by sex, grade, or race/ethnicity.

The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino.
† Insufficient data

(a) Texting while driving was calculated from the respondents who reported that they drive a car.

- Among students who reported driving, 12th graders were more likely to report texting while driving than students in any other high school grade and 11th grade students were more likely to report texting while driving than 10th grade students.
- No significant differences were seen by race/ethnicity.

* Students were allowed to indicate multiple race categories. White, Black, Other and Multiracial categories refer to non-Hispanic. If Hispanic/Latino was indicated as an ethnic identification, the student was categorized as Hispanic/Latino regardless of race category. The Other category includes American Indian or Alaska Natives, Asian, Hawaiian or Pacific Islander. The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino.

(a) Symptoms of a sports-related TBI was calculated as the percent of those who played on a sports team in the last 12 months.

### Middle School
- Eighty percent (80%) of students reported that they had played on a sports team in the past year.
- Males were more likely than females to report experiencing symptoms of a sports-related TBI in the past year.
- Students in 8th grade were more likely than students in 6th grade to report experiencing symptoms of a sports-related TBI in the past year.
- There were no significant differences by race/ethnicity.

### High School
- Seventy-two percent (72%) of students reported that they had played on a sports team in the past year.
- Males were more likely than females to report experiencing symptoms of a sports-related TBI in the past year.
VIOLENCE-RELATED BEHAVIORS AND EXPERIENCES

Violent injury and death disproportionately affect adolescents and young adults in the United States. It has been estimated that 1 in 5 U.S. children experience some form of child maltreatment, with 9% of those being victims of physical abuse. Increasing numbers of teens and pre-teens are becoming victims of electronic aggression (or cyber-bullying), with research suggesting that youth who are victimized electronically are also very likely to be victimized off-line (i.e., sexually harassed, psychological or emotional abuse by a caregiver, witnessing an assault with a weapon, and being raped).

All respondents were asked if they had ever been electronically bullied during the last year, which included being bullied through e-mail, chat rooms, instant messaging, web sites, or texting. All respondents were also asked how many times they had been bullied at school in the past 12 months and if they had ever been hurt physically by a date or someone they were going out with. All respondents were asked if they had initiated violence towards others in the past 12 months including bullying, cyber-bullying, and physically hurting a date.

All Middle School students were asked if they were physically hurt by someone in their family or if they witnessed violence in their family in the past 12 months.

All High School students were asked if anyone ever had sexual contact with them against their will and, if so, their relationship to the perpetrator. High school students were also asked if they had ever initiated sexual contact with someone in the past 12 months who objected or told them ‘No’.

See Appendix 2 questions 28-32, Appendix 3 questions 27-32, and Appendix 4 questions 28 and 32 for the exact wording of these questions.

Presented below are
1. The percentage of students involved in bullying in the past 12 months
2. Characteristics of students who reported initiating bullying in the past 12 months
3. The percentage of students who were victims of cyber-bullying in the past 12 months
4. The percentage of high school students who were victims of cyber-bullying in the past 12 months by race and gender
5. The percentage of middle school students who were physically hurt by a family member or witnessed violence in their family in the past 12 months
6. The percentage of students who were ever victims of dating violence
7. The percentage of high school students who ever experienced unwanted sexual contact
8. The percentage of students who initiated violence such as bullying, dating violence and sexual assault in the past 12 months

The combined high school sample was used to analyze data on victims of cyber-bullying, cyber-bullying by race and gender, and dating violence. YHS high school data was used to analyze bullying involvement, characteristics of bullies, unwanted sexual contact, and violence initiation.
BULLYING

Figure 12: Percentage of Massachusetts Youth Involved in Bullying, YHS 2011

(a) Neither was defined as never having been bullied at school or bullying someone else in the last 12 months. Victims were defined as only being bullied in the past 12 months, not bullying anyone else. Bullies were defined as only bullying someone else in the past 12 months, not being bullied. Bully-victims were defined as those who were victims of bullying in the past 12 months and those who also reported bullying someone else in the past 12 months.

- Middle school students were more likely to report being ‘Victims only’ of bullying than high school students in the past 12 months.
- High school students were more likely to report being ‘Bullies only’ than middle school students in the past 12 months.
- In addition to the graph presented above, it was found that middle school students were more likely to report any involvement in bullying than high school students in the past 12 months (40% vs. 32%).

Victims of In-School Bullying, YHS 2011

Middle School
- Female students were more likely than male students to report being a victim of bullying at school in the past 12 months (40% vs. 32%).
- Multiracial students were more likely than Black students to report being a victim of bullying at school in the past 12 months (44% vs. 28%).
- Students who were victims of in-school bullying were more likely than non-victims to feel that they needed to talk to someone other than family members about their problems (45% vs. 21%).

High School
- 9th grade students were more likely than 11th or 12th grade students to report being a victim of bullying at school in the past 12 months (32% vs. 23%, 20%).
- Students who were victims of in-school bullying were more likely than non-victims to feel that they needed to talk to someone other than family members about their problems (64% vs. 42%).
Middle School

- Nearly one-quarter of bullies reported drug use in the past 30 days.
- Thirty-five percent (35%) of bullies reported non-suicidal self-injury in the past 12 months.
- One in five bullies reported seriously considering suicide in the past 12 months.
- Ten percent (10%) of bullies reported poor grades in the past 12 months.

High School

- Just over half of bullies reported drug use in the past 30 days.
- Nearly one-third of bullies reported non-suicidal self-injury in the past 12 months.
- Twenty-two percent (22%) of bullies reported seriously considering suicide in the past 12 months.
- Seventeen percent (17%) of bullies reported poor grades in the past 12 months.

The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino.

(a) Question referred to the past 12 months. Cyber-bullying was defined as being bullied through email, chat rooms, instant messaging, web sites or texting.

(b) Combined sample MYHS + MYRBS.

Middle School
- Female students were more than twice as likely as male students to report being a victim of cyber-bullying.
- There were no significant differences by race/ethnicity.

High School
- Female students were over twice as likely as male students to report being a victim of cyber-bullying.
- White students were more likely than Hispanic students to report being a victim of cyber-bullying.
Figure 14: Victims of Cyber-bullying by Race and Gender Among Massachusetts High School Students, YHS + YRBS 2011

- White females were more likely than White males to be victims of cyber-bullying in the past 12 months.
- Hispanic females were more likely than Hispanic males to be victims of cyber-bullying in the past 12 months.
- White females were more likely than Black, Hispanic, and Other/Multiracial females to be victims of cyber-bullying in the past 12 months.

(a) Combined sample MYHS + MYRBS
(b) Other and Multiracial were combined due to small sample size
*Significant difference between males and females

(a) Questions referred to experiences in the past 12 months

### Physically hurt by family member
- White middle school students were less likely to report being physically hurt by a family member compared to students of any other race/ethnicity except ‘Other’ race.

### Witnessed violence in your family
- White middle school students were less likely to report witnessing violence in their family compared to Multiracial students.

\(^a\) Victim of dating violence calculated as the percent of all survey respondents (including those who reported that they had never been on a date).

\(^b\) Combined sample MYHS + MYRBS.

---

**Middle School**
- Hispanic students were over twice as likely as White students to report being a victim of dating violence.

**High School**
- Female students were twice as likely as male students to report being a victim of dating violence.
- There were no significant differences observed by grade level or race/ethnicity.
- Among female students, there were no significant differences observed by grade level.
Overall, female high school students were over three times more likely than male students to report unwanted sexual contact.

Among females, students were more likely to report that one or more of their dating partners performed the sexual assault, compared to family members, acquaintances, and strangers.

Male students were over three times more likely than female students to report that one or more strangers performed the sexual assault.
Middle School
- Males were more likely to report that they initiated in-person bullying than females (12% vs. 8%).
- Females were more likely to report that they initiated cyber-bullying than males (7% vs. 4%).
- 8th grade students were more likely than 6th grade students to report initiating both in-person bullying (12% vs. 8%) and cyber-bullying (7% vs. 4%).

High School
- More males reported that they initiated in-person bullying than females (17% vs. 9%).
- High school students were more likely than middle school students to report that they had initiated in-person bullying and cyber-bullying in the past 12 months.
MENTAL HEALTH AND SUICIDE

Youth with better mental health are physically healthier, demonstrate more socially positive behaviors and engage in fewer risky behaviors; whereas youth with mental health problems, such as depression, are more likely to engage in health risk behaviors.\textsuperscript{27} Suicide is a serious public health problem that affects even young people. For youth between the ages of 10 and 24, suicide is the third leading cause of death. It results in approximately 4,400 lives lost each year.\textsuperscript{28}

All respondents were asked if they ever felt so sad or hopeless almost every day for two weeks or more in a row during the past year that they stopped doing some usual activities. All respondents were asked if they ever seriously considered attempting suicide in the past 12 months, how many times they actually attempted suicide in the past 12 months, and how many times they hurt or injured themselves on purpose without wanting to die in the past 12 months.

All respondents were asked if they felt the need to talk to someone other than their family about how they were feeling; how things were going in their life or problems they might have had in the past 12 months.

See Appendix 2 questions 19-25, Appendix 3 questions 18-24, and Appendix 4 questions 34-37 for the exact wording of these questions.

Presented here are
1. The percentage of students who felt sad or hopeless for two weeks or more in the past 12 months
2. The percentage of students who felt the need to talk to someone other than family about their problems in the past 12 months
3. The percentage of students who seriously considered suicide in the past 12 months
4. The percentage of students who seriously considered suicide in the past 12 months by race and gender
5. The percentage of students that seriously considered suicide in the past 12 months stratified by feeling sad or hopeless
6. The percentage of students that attempted suicide in the past 12 months by gender
7. The percentage of students who reported non-suicidal self-injury in the past 12 months

\textit{The combined high school sample was used to present sad or hopeless for two weeks or more, seriously considered suicide, seriously considered suicide by race and gender, percent of students that considered suicide by feeling sad or hopeless, and attempted suicide by gender. YHS high school data was used to present non-suicidal self-injury and the percent of students that needed to talk to someone other than family.}

* Students were allowed to indicate multiple race categories. White, Black, Other and Multiracial categories refer to non-Hispanic. If Hispanic/Latino was indicated as an ethnic identification, the student was categorized as Hispanic/Latino regardless of race category. The Other category includes American Indian or Alaska Natives, Asian, Hawaiian or Pacific Islander. The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino.

(a) Combined sample MYHS + MYRBS.

**Middle School**
- Female students were twice as likely as male students to have seriously considered suicide in the past year.
- White students were less likely than Hispanic students to have seriously considered suicide in the past year.

**High School**
- Female students were more likely than male students to have seriously considered suicide in the past year.
- 9th grade students were more likely than 12th grade students to have seriously considered suicide in the past year.
- There were no significant differences by race/ethnicity.
- Female students in 9th grade were more likely than 12th grader females to have seriously considered suicide in the past year. There was no difference seen by grade among male students.
- High school students were more likely than middle school students to report seriously considering suicide in the past year. This held true for both males and females and for White students.
- White females were the least likely to consider suicide compared to Black, Hispanic and Other/Multiracial females.

Middle School
- Students who felt sad or hopeless for 2 weeks or more were ten times more likely to seriously consider suicide than students who did not feel sad or hopeless.

High School
- Students who felt sad or hopeless for 2 weeks or more were nearly nine times more likely to seriously consider suicide than students who did not feel sad or hopeless.
Middle School
- Female students were twice as likely as male students to have attempted suicide in the past 12 months.

High School
- Female students were more likely than male students to have attempted suicide in the past 12 months.

(a) Question referred to the past 12 months

**Middle School**
- Female students were more likely than male students to report non-suicidal self-injury in the past 12 months.
- White students were less likely to report non-suicidal self-injury compared to Hispanic, Multiracial and ‘Other’ race students.

**High School**
- Female students were twice as likely as male students to report non-suicidal self-injury in the past 12 months.
- 9th and 10th grade students were more likely than 12th grade students to report non-suicidal self-injury in the past 12 months.
- Multiracial students were more likely than White students to report non-suicidal self-injury in the past 12 months.
SEXUAL BEHAVIOR

While more than half of high school students in Massachusetts report never having had sex, negative sexual health outcomes are disproportionately clustered among young people. This suggests that among those youth who are engaging in sexual behaviors, they may be doing so without protecting their sexual health. Young people aged 15-19 in Massachusetts experience rates of gonorrhea and chlamydia two to four times higher, respectively, than the statewide all-age rates. Sexual minority youth – those who self-identify as gay, lesbian, bisexual, or transgender - are at an increased risk for certain negative health outcomes. Young gay and bisexual males have disproportionately high rates of HIV, syphilis and other STDs, and adolescent lesbian and bisexual females are more likely to have ever been pregnant than their hetero sexual peers.

All High School students were asked with whom they had sexual intercourse during their life. Response options included ‘I have never had sexual intercourse’, ‘Female’, ‘Males’, and ‘Females and males’.

All High School students were also asked to indicate their sexual identity and how easy or difficult it would be for them to get condoms. Response options included ‘Very easy’, ‘Fairly easy’, ‘Fairly difficult’, ‘Very difficult’, and ‘Impossible’.

See Appendix 3 questions 81-84 and Appendix 4 question 11 for the exact wording of these questions. Middle school students were not asked questions about sexual behavior.

Presented below are:

1. The percentage of high school students by whom they had sexual intercourse with during their lives by gender
2. The percentage of high school students that have never had sexual intercourse
3. The percentage of high school students by level of difficulty for obtaining condoms
4. The percentage of high school students by sexual identity

The combined high school sample was used to present sexual identity. YHS high school data was used to present sexual intercourse and condom accessibility.

The Multiracial category includes youth who indicated more than one race but did not identify as Hispanic/Latino.

(a) Percent who responded ‘I have never had sexual intercourse’ to the question ‘During your life with whom have you had sexual intercourse?’

High School

- Equal percentages of males and females reported that they had never had sexual intercourse.
- Students in 9th grade were more likely to report that they had never had sexual intercourse than students in any other grade.
- White and ‘Other’ race students were more likely than Hispanic students to report that they had never had sexual intercourse.
• Nearly two-thirds of high school students reported that it would be ‘very easy’ for them to obtain condoms.

• Ten percent of students reported that it would be ‘fairly difficult’, ‘very difficult’, or ‘impossible’ for them to obtain condoms.

(a) Response options included ‘Heterosexual (straight)’, ‘Gay or lesbian’, ‘Bisexual’, ‘Not sure’.

(b) Combined sample MYHS + MYRBS.

• Two percent of high school students described themselves as gay or lesbian, four percent described themselves as bisexual and two percent reported that they were unsure of their sexual identity.
LIMITATIONS

- The data collected by the MYHS and the MYRBS are based on self-report from students. Self-reported data are subject to bias since students may answer questions based on what they think survey administrators will want to hear or to impress their peers. Students may also have had trouble remembering events that happened to them during their lives.
- The data are only representative of 6th through 12th grade public school students in Massachusetts who were present on the day of the survey. Students who are often absent from school may have different health and risk behaviors than students who are nearly always present. The data are not representative of home-schooled students, private school students, or youth enrolled in alternative education settings.
- Students with severe limitations or disabilities may not have been included in the survey, as the students were required to fill out the survey by themselves.
- All data presented in this report are cross-sectional and therefore no inferences about causality should be made.
- School recruitment was difficult and should be started earlier in the year. It was particularly difficult since some schools do their own surveys or are being helped by outside groups to conduct their own surveys. Future coordination with these outside groups may assist in increasing school recruitment numbers, which would result in an increased response rate.

CONCLUSIONS

Results from this report illustrate the wide range of issues that currently affect Massachusetts youth. Important results to note include the many racial and gender disparities seen for numerous risk behaviors. Some emerging issues of concern include cyber-bullying and texting while driving. The data presented in this report will help public health programs understand the most pressing issues for youth in the state and will allow them to develop effective interventions. In addition, the results may help guide youth health policy and legislation. Continuation of the Youth Health Survey will eventually allow for analyses of risk factors over time to determine areas of improvement.
APPENDIX 1

SAMPLE AND PARTICIPATION

For the MYHS and MYRBS high school surveys, a two-stage sampling method was used by the Centers for Disease Control and Prevention (CDC) to produce a representative sample of all public school students in Massachusetts in grades nine through twelve. The first stage was the random selection of high schools in the state with a probability proportional to school enrollment size. The second stage included the random selection of six classes of a required subject within the high schools. Half of the classes were randomly assigned to receive the MYHS and the other half the MYRBS. Sixty-nine high schools were selected for the sample. Two of these were ineligible; 54 of the remaining high schools agreed to participate. This gave a high school cooperation rate of 80.6%. CSR staff administered the surveys, collecting data from a total of 5,371 students in grades nine through twelve. 2642 students received the MYHS and 2729 received the MYRBS. The student response rate was 85.8% for MYHS and 85.7% for MYRBS. The overall response rates (i.e., the school response rate multiplied by the student response rate) were 69.2% for the high school MYHS and 69.1% for MYRBS.

For the MYHS middle school survey, a similar sampling method was used by CSR which randomly selected 120 public schools from a list obtained from DESE with at least one of grades six through eight. Eighty-three of these schools agreed to participate, resulting in a school cooperation rate of 69.2%. Two classes from each school were randomly selected to complete the survey. Data was collected from 3,554 students in grades six through eight. The student response rate was 90.7%. This resulted in an overall response rate for the middle school MYHS of 62.7%.

WEIGHTING AND VARIANCE ESTIMATION

Weights for the YHS high school data were constructed using the recommended CDC protocol. Base weights reflecting the inverse of the probability of selection were provided by the CDC for each high school. Three adjustments were then applied to these weights:

1) **A school level non-response adjustment.** This adjustment was computed by first dividing the sampled schools into three strata, namely small schools, medium schools and large schools. These strata were created to have approximate equal total enrollments. The weight adjustment within each stratum was then simply the total enrollment from participating schools within the stratum divided by the total enrollment from all schools within the stratum regardless of whether they participated in the survey or not. The purpose of this adjustment factor was to increase the weights for students in participating schools to account for schools that did not participate.

2) **A student non-response adjustment.** This adjustment is done within class at each school. The adjustment is to increase the weights of students within a class who completed a survey to account for students within the class who did not. This adjustment was simply the sum of the weights for the students who completed the survey in the class divided by the sum of the weights for all students enrolled in the class.

3) **A post-stratification adjustment.** This adjustment was to make the weighted sample estimates agree with known or estimated outside estimates for several demographic factors. The particular factors used in this adjustment were grade (9 through 12), gender, and race/ethnicity. For Massachusetts, the race/ethnicity weight cells were white, Hispanic, black and other.
These non-response adjusted weights are placed on the final YHS data files in a variable named FINWGT. This non-response weight can be interpreted as the number of students represented by each completed questionnaire.

Weights for the YHS middle school file were computed in a similar fashion. YRBS weighting was performed by the CDC using the protocol described above.

The sample for this study is a complex sample design due to the clustering of students within randomly selected schools. Therefore, an assumption of simple random sampling for data analysis will almost certainly lead to estimated variances and standard errors of sample statistics that are too small. To account for the complex sample design, a cluster variable (school ID) was created in the YHS data files to represent students clustered within each school using a numeric code that cannot be used to identify an individual school.

**Creation of the Combined High School File**

Since the high school YHS and YRBS are completed at the same time in the same schools, the possibility presented itself to create a combined file containing data from both surveys. Although the high school YHS and YRBS differ slightly in that they ask some different questions in a different order, there were still 28 questions that were identical on the two surveys. Some of those questions collected demographic information such as age, race and grade, and other questions collected information about alcohol and tobacco use, body weight, and other health issues. The different order of the questions in the surveys might produce some differences in estimates; however, an analysis of the data determined that these differences were not significant.

The combined high school sample was created using the following methods. Minor recoding was done to make sure all response categories were the same. A total of 33 variables were in the file, including the 28 identical questions on the surveys, a person ID number to give a unique identifier to each record, a school ID number that identifies students grouped by school and survey administered, and two sampling weight variables. The two weight variables were FINWEIGHT and COMBWEIGHT. The FINWEIGHT variable is the final weight variable carried over from the YHS or YRBS data, respectively. The COMBWEIGHT, which was used for analysis of the combined file, was created by performing a post-stratification adjustment to the final weights from each survey. The post-stratification was adjusted to grade (9 through 12), gender and race (white, Hispanic, black, other). The cluster variable (school ID) for the combined file was created as described above, using numeric codes that cannot identify an individual school. The ‘person ID’ variable was used to distinguish between YHS and YRBS records. A ‘person ID’ under 3000 represents YHS data and a ‘person ID’ over 3000 represents YRBS data.
APPENDIX 2
MIDDLE SCHOOL YHS QUESTIONNAIRE

Massachusetts
Youth Health Survey

Sponsored by:
Massachusetts Department of Public Health
and
Massachusetts Department of Elementary and
Secondary Education

Conducted by:
Center for Survey Research
University of Massachusetts Boston

Winter 2011

Before you begin, there are a few important things you need to know.

- Your answers are completely anonymous. There are no markings anywhere on the questionnaire that allows you to be identified. Please do not place your name or any other personal information on the questionnaire. Your answers will be combined with other answers for statistical analysis.
- The purpose of the survey is to gather information from school students in Massachusetts about health topics such as the use of tobacco, alcohol and drugs, in and out of school activities, diet and exercise and coping with stress. This information will be used to better understand the concerns and health practices of current students.
- It is important that you answer each question as honestly and accurately as you can.
- If there is any question that you would prefer not to answer, please just skip that question and go on to the next question.
- Your participation is, of course voluntary. If you find the survey upsetting, you may stop answering the questions.
- Answer each question by filling in the circles like this: Incorrect marks: ☐ ☐ ○ Correct mark: ●
  ▪ You must use a number 2 pencil.
- Arrows (→) will direct you to answer follow-up questions or to skip over certain questions.
- When you are finished with the survey, simply place it in the box located at the front of the class.

Your participation is greatly appreciated, as this is one of the only ways for students like yourself to anonymously report on health issues that may concern you.

Thank you for your time and cooperation
**BACKGROUND INFORMATION**

1. **In what grade are you?**
   - O 6th grade
   - O 7th grade
   - O 8th grade
   - O Other/Ungraded

2. **How old are you?**
   - O 11 years old or younger
   - O 12 years old
   - O 13 years old
   - O 14 years old
   - O 15 years old
   - O 16 years old
   - O 17 years old
   - O 18 years old or older

3. **What is your sex?**
   - O Female
   - O Male

4. **How tall are you without your shoes on?**
   - Write your height in the shaded blank boxes. Fill in the matching circles below each number.

5. **How much do you weigh without your shoes on?**
   - Write your weight in the shaded blank boxes. Fill in the matching circles below each number.

6. **Are you Hispanic or Latino?**
   - O Yes
   - O No

7. **What is your race?**
   - (Select one or more responses)
   - O American Indian or Alaskan Native
   - O Asian
   - O Black or African American
   - O Native Hawaiian or Other Pacific Islander
   - O White

8. **During the past 12 months, how would you describe your grades in school?**
   - O Mostly A’s
   - O Mostly B’s
   - O Mostly C’s
   - O Mostly D’s
   - O Mostly F’s
   - O None of these grades
   - O Not sure

9. **Are you eligible to receive free or reduced price lunches at your school?**
   - O Yes
   - O No
   - O Don’t Know/Not sure
10. Thinking about the last 7 days, how many hours did you spend watching television? (Do NOT include videos, DVDs, PlayStation or Nintendo.)

- 0 Days
- 1 Day
- 2 Days
- 3 Days
- 4 Days
- 5 Days

72
15. **Yesterday,** how many times did you eat vegetables?

**DEFINITION:**
Count all cooked and uncooked vegetables; salads; and boiled, baked and mashed potatoes.

*Do NOT* count: French fries, potato chips, or lettuce that is on a sandwich or sub.

- I did not eat vegetables yesterday
- 1 time
- 2 times
- 3 or more times

16. **Yesterday,** how many times did you eat fruit or drink 100% fruit juice?

- I did not eat fruit or drink 100% fruit juice yesterday
- 1 time
- 2 times
- 3 or more times

17. **Yesterday,** how many cans or glasses of non-diet soda did you drink?

**DEFINITION:**
A non-diet soda is a soda with sugar in it, such as Coke®, Pepsi®, Sprite®, ginger ale, or root beer.

Count a 20-ounce bottle as 2 glasses.

- I did not drink any non-diet soda yesterday
- 1 can or glass
- 2 cans or glasses
- 3 or more cans or glasses

18. **Yesterday,** how many cans or glasses of flavored drinks did you have?

**DEFINITION:**
Flavored drinks include punch, sports drinks, sweetened ice tea, and other fruit-flavored drinks like Kool Aid® and Hawaiian Punch®.

*Do NOT* count 100% fruit juice.

Count a 20-ounce bottle as 2 glasses.

- I did not drink any flavored drinks yesterday
- 1 can or glass
- 2 cans or glasses
- 3 or more cans or glasses

---

**QUESTIONS ABOUT HOW YOU FEEL**

19. **During the past 12 months,** have you felt you needed to talk to *someone other than your family* about how you were feeling, how things were going in your life, or problems you might have had?

- Yes
- No  *If NO, go to Question 21*

20. **During the past 12 months,** did you talk to any of the following people about things like that?

<table>
<thead>
<tr>

21. **During the past 12 months,** did you ever feel so sad or hopeless almost every day for two weeks or more in a row that you stopped doing some usual activities?

- Yes
- No

22. **During the past 12 months,** did you ever seriously consider attempting suicide?

- Yes
- No

23. **During the past 12 months,** how many times did you actually attempt suicide?

- 0 times  *If 0 times, Go to Question 25*
- 1 time
- 2 to 3 times
- 4 to 5 times
- 6 or more times
24. If you attempted suicide during the past 12 months, did any attempt result in an injury, poisoning, or overdose that had to be treated by a doctor or nurse?
   - Yes
   - No
   - I did not attempt suicide

25. During the past 12 months, how many times did you hurt or injure yourself on purpose without wanting to die? (For example, by cutting, burning, or bruising yourself on purpose.)
   - 0 times
   - 1 or 2 times
   - 3 to 5 times
   - 6 to 9 times
   - 10 to 19 times
   - 20 or more times

26. During the past 12 months, did you suffer a blow or jolt to your head while playing with a sports team (either during a game or during practice) which caused you to get “knocked out”, have memory problems, double or blurry vision, headaches or “pressure” in the head, or nausea or vomiting?
   - Yes
   - No
   - I did not play on a sports team during the past 12 months

27. How often do you wear a seatbelt when riding in a car driven by someone else?
   - Never
   - Rarely
   - Sometimes
   - Most of the time
   - Always

28. Did any of the following happen to you in the past 12 months?
   - You were physically hurt by someone in your family
   - You witnessed violence in your family

29. During the past 12 months, how many times have you been bullied at school? (Being bullied includes being repeatedly teased, threatened, hit, kicked, or excluded by another student or group of students.)
   - 0 times
   - 1 time
   - 2 or 3 times
   - 4 or 5 times
   - 6 or 7 times
   - 8 or 9 times
   - 10 or 11 times
   - 12 or more times

30. During the past 12 months, have you ever been electronically bullied? (Include being bullied through e-mail, chat rooms, instant messaging, Web sites, or texting.)
   - Yes
   - No

31. Did you do any of the following in the past 12 months?
   - Bully or push someone around
   - Use texting, e-mail, or social networking sites to make fun of, threaten, or insult another kid, or try to hurt another kid’s reputation
   - Threaten to hurt, physically hurt, or try to hurt a date or someone you were going out with

32. Have you ever been hurt physically by a date or someone you were going out with? (Include being hurt by being shoved, slapped, hit, or kicked.)
   - I have never been on a date or gone out with anyone
   - Yes, this has happened to me in the last 12 months
   - Yes, this has happened to me, but longer ago than the past 12 months
   - Yes, this has happened to me in the past 12 months and longer ago than that
   - No, this has not happened to me
QUESTIONS ABOUT YOUR FAMILY AND PEERS

33. How would your parent(s) react if they found out you regularly drank alcohol. Would they be:
   - Extremely Upset
   - Fairly Upset
   - A Little Upset
   - Not Upset at All

34. Do you think most people your age do the following?

<table>
<thead>
<tr>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Drink alcohol</td>
<td>o</td>
</tr>
<tr>
<td>b. Smoke cigarettes</td>
<td>o</td>
</tr>
<tr>
<td>c. Smoke marijuana</td>
<td>o</td>
</tr>
<tr>
<td>d. Use other illegal drugs</td>
<td>o</td>
</tr>
<tr>
<td>e. Bully, threaten, or push around other kids</td>
<td>o</td>
</tr>
</tbody>
</table>

QUESTIONS ABOUT ALCOHOL

The next 7 questions ask about drinking alcohol. This includes drinking beer, wine, wine coolers, hard lemonade, hard cider, and liquor such as rum, gin, vodka, or whiskey. For these questions, drinking alcohol does not include drinking a few sips of wine for religious purposes.

35. During your life, on how many days have you had at least one drink of alcohol?
   - 0 days
   - 1 or 2 days
   - 3 to 9 days
   - 10 to 19 days
   - 20 to 39 days
   - 40 to 99 days
   - 100 or more days

36. How old were you when you had your first drink of alcohol other than a few sips?
   - I have never had a drink of alcohol other than a few sips
   - 8 years old or younger
   - 9 or 10 years old
   - 11 or 12 years old
   - 13 or 14 years old
   - 15 or 16 years old
   - 17 years old or older

37. During the past 30 days, on how many days did you have at least one drink of alcohol?
   - 0 days
   - 1 or 2 days
   - 3 to 5 days
   - 6 to 9 days
   - 10 to 19 days
   - 20 to 29 days
   - All 30 days

38. During the past 30 days, on how many days did you have 5 or more drinks of alcohol in a row, that is, within a couple of hours?
   - 0 days
   - 1 day
   - 2 days
   - 3 to 5 days
   - 6 to 9 days
   - 10 to 19 days
   - 20 or more days

39. There are many different ways to get beer, wine coolers, wine, or liquor. Which of the following are how you get alcohol?

<table>
<thead>
<tr>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. I buy it from a supermarket or a convenience store</td>
<td>o</td>
</tr>
<tr>
<td>b. I buy it from a liquor store or package store</td>
<td>o</td>
</tr>
<tr>
<td>c. I buy it from bars or clubs or restaurants</td>
<td>o</td>
</tr>
<tr>
<td>d. I have someone else buy it for me</td>
<td>o</td>
</tr>
<tr>
<td>e. I get it through my friends</td>
<td>o</td>
</tr>
<tr>
<td>f. I get it at home</td>
<td>o</td>
</tr>
<tr>
<td>g. I get it at parties</td>
<td>o</td>
</tr>
</tbody>
</table>

40. During the past 30 days, how many times did you drive a car or other vehicle when you had been drinking alcohol?
   - I do not drive
   - 0 times
   - 1 time
   - 2 or 3 times
   - 4 or 5 times
   - 6 or more times
41. How much do you think people risk harming themselves (physically or in other ways) if they have five or more drinks in a row?
   - No risk
   - Slight risk
   - Moderate risk
   - Great risk

42. How old were you when you tried marijuana for the first time?
   - I have never tried marijuana
   - 8 years old or younger
   - 9 or 10 years old
   - 11 or 12 years old
   - 13 or 14 years old
   - 15 or 16 years old
   - 17 years old or older

43. In the past 30 days, have you used marijuana?
   - Yes
   - No

44. In the past 12 months did you ever drive a car or other vehicle when you had been smoking marijuana?
   - I do not drive
   - Yes
   - No

45. The next 2 questions ask about using inhalants. This includes sniffing glue, breathing the contents of aerosol spray cans, or inhaling any paints or sprays to get high.

45. How old were you when you first used inhalants?
   - I have never used inhalants
   - 9 or younger
   - 10
   - 11
   - 12
   - 13
   - 14
   - 15
   - 16
   - 17
   - 18 or older

46. In the past 30 days, have you used inhalants?
   - Yes
   - No

47. In your lifetime, have you used heroin (also called smack, junk, or China White)?
   - Yes
   - No  If NO, go to Question 49

48. During the past 30 days, have you used heroin (also called smack, junk, or China White)?
   - Yes
   - No

49. During your life, have you used cocaine?
   - Yes
   - No  If NO, go to Question 51

50. In the past 30 days, have you used cocaine?
   - Yes
   - No
51. In your lifetime, have you ever used crack?
   o Yes
   o No If NO, go to Question 53

52. In the past 30 days, have you used crack?
   o Yes
   o No

53. In your lifetime, have you ever taken amphetamines or methamphetamines 
   (such as speed, uppers, dexters, bennies, crystal, crank, or ice)?
   o Yes
   o No If NO, go to Question 55

54. In the past 30 days, have you taken amphetamines or methamphetamines 
   (such as speed, uppers, dexters, bennies, crystal, crank, or ice)?
   o Yes
   o No

55. In your lifetime, have you ever used ecstasy 
   (MDMA, also called “E” or “X”)?
   o Yes
   o No If NO, go to Question 57

56. In the past 30 days, have you used ecstasy 
   (MDMA, also called “E” or “X”)?
   o Yes
   o No

57. In your lifetime, have you ever taken over-the-counter medication to get high?
   o Yes
   o No If NO, go to Question 59

58. In the past 30 days, have you taken over-the-counter medication to get high?
   o Yes
   o No

59. In your lifetime, have you ever taken drugs from prescriptions that weren’t your own?
   o Yes
   o No If NO, go to Question 61

60. In the past 30 days, have you taken drugs from prescriptions that weren’t your own?
   o Yes
   o No

61. In your lifetime, have you ever taken any of the following without a prescription?

   | a. Narcotics (such as methadone, opium, morphine, and codeine) | Yes | No |
   | b. Ritalin | Yes | No |
   | c. OxyContin | Yes | No |
   | d. Steroids (body building hormones) | Yes | No |

62. In the past 30 days, have you ever taken any of the following without a prescription?

   | a. Narcotics (such as methadone, opium, morphine, and codeine) | Yes | No |
   | b. Ritalin | Yes | No |
   | c. OxyContin | Yes | No |
   | d. Steroids (body building hormones) | Yes | No |
63. How easy or difficult would it be for you to get each of the following?

<table>
<thead>
<tr>
<th></th>
<th>VERY EASY</th>
<th>FAIRLY EASY</th>
<th>FAIRLY DIFFICULT</th>
<th>VERY DIFFICULT</th>

QUESTIONS ABOUT TOBACCO

65. Have you ever tried cigarette smoking, even one or two puffs?

- o Yes
- o No

66. About how many cigarettes have you smoked in your entire life?

- None  If NONE, Go to Question 69
- o 1 or more puffs but never a whole cigarette
- o 1 cigarette
- o 2 to 5 cigarettes
- o 6 to 15 cigarettes (about ½ pack total)
- o 16 to 25 cigarettes (about 1 pack total)
- o 26 to 99 cigarettes (more than 1 pack, but less than 5 packs)
- o 100 or more cigarettes (5 or more packs)

67. During the past 30 days, on how many days did you smoke cigarettes?

- o 0 days
- o 1 or 2 days
- o 3 to 5 days
- o 6 to 9 days
- o 10 to 19 days
- o 20 to 29 days
- o All 30 days
68. During the past 30 days, how did you usually get your own cigarettes? (CHOOSE ONLY ONE ANSWER)
   o I did not smoke cigarettes during the past 30 days
   o I bought them in a store such as a convenience store, supermarket, discount store, or gas station
   o I bought them from a vending machine
   o I gave someone else money to buy them for me
   o I borrowed (or bummed) them from someone else
   o A person 18 years old or older gave them to me
   o I took them from a store or family member
   o I got them some other way

69. Do you think that you will try a cigarette soon?
   o I have already tried smoking cigarettes
   o Yes
   o No

70. Do you think that you will smoke a cigarette at any time during the next year?
   o Definitely yes
   o Probably yes
   o Probably not
   o Definitely not

71. If one of your best friends offered you a cigarette, would you smoke it?
   o Definitely yes
   o Probably yes
   o Probably not
   o Definitely not

72. Does anyone who lives with you now smoke cigarettes?
   o Yes
   o No

73. During the past 12 months, have you participated in any community activities to discourage people your age from using cigarettes, chewing tobacco, snuff, dip or cigars?
   o Yes
   o No

74. During the past 7 days, on how many days were you in the same room with someone who was smoking cigarettes?
   o 0 days
   o 1 or 2 days
   o 3 or 4 days
   o 5 or 6 days
   o 7 days

75. During the past 7 days, on how many days did you ride in a car with someone who was smoking cigarettes?
   o 0 days
   o 1 or 2 days
   o 3 or 4 days
   o 5 or 6 days
   o 7 days

76. Have you ever used chewing tobacco, snuff, or dip, such as Redman, Levi Garrett, Beechnut, Skoal, Skoal Bandits or Copenhagen?
   o Yes
   o No  If No, go to Question 78

77. During the past 30 days, on how many days did you use chewing tobacco, snuff, or dip?
   o 0 days
   o 1 or 2 days
   o 3 to 5 days
   o 6 to 9 days
   o 10 to 19 days
   o 20 to 29 days
   o All 30 days

78. Have you ever tried smoking cigars, cigarillos, or little cigars, even one or two puffs?
   o Yes
   o No  If No, go to Question 80

79. During the past 30 days, on how many days did you smoke cigars, cigarillos, or little cigars?
   o 0 days
   o 1 or 2 days
   o 3 to 5 days
   o 6 to 9 days
   o 10 to 19 days
   o 20 to 29 days
   o All 30 days
80. Have you ever tried any of the following products, even just one time? (You can CHOOSE ONE ANSWER or MORE THAN ONE ANSWER)
   ○ Roll-your-own cigarettes
   ○ Flavored cigarettes, such as Camel Crush
   ○ Clove cigars
   ○ Tipped cigars, such as Black and Milds
   ○ Flavored little cigars
   ○ Smoking tobacco from a hookah or a water pipe
   ○ Snus, such as Camel or Marlboro Snus
   ○ Dissolvable tobacco products, such as Ariva, Stonewall, Camel orbs, Camel Sticks, or Camel strips
   ○ Electronic Cigarettes or E-cigarettes, such as Ruyan or NJOY
   ○ Some other new tobacco products not listed here
   ○ I have never tried any of the products listed above or any new tobacco product

81. In the past 30 days, have you seen or heard any ads or promotions for alcohol on TV, the Internet, the radio, or in newspapers or magazines?
   - Yes
   - No

82. In the past 30 days, have you seen or heard any anti-alcohol and/or anti-drug messages on TV, the Internet, the radio, or in newspapers or magazines?
   ○ Yes
   ○ No

83. Would you say that in general your health is:
   ○ Excellent
   ○ Very good
   ○ Good
   ○ Fair
   ○ Poor

84. Do you have any physical disabilities or long-term health problems?
   ○ No
   ○ Yes
   ○ Not Sure

85. Do you have any long-term emotional problems or learning disabilities?
   ○ No
   ○ Yes
   ○ Not Sure

86. Have you ever been told by a doctor, nurse or other health care professional that you have asthma?
   ○ Yes
   ○ No If NO, Go to Question 88
   ○ Not sure If NOT SURE, Go to Question 88

87. During the past 12 months, how many days did you stay out of school because of your asthma?
   ○ None
   ○ 1 or 2 days
   ○ 3 or 4 days
   ○ 5 to 10 days
   ○ More than 10 days
   ○ Not sure

88. Have you ever been told by a doctor, nurse or other health care professional that you have diabetes?
   ○ Yes
   ○ No If NO, Go to Question 90
   ○ Not sure If NOT SURE, Go to Question 90

89. Are you now taking any medication for your diabetes?
   ○ Yes, I’m taking insulin
   ○ Yes, I’m taking diabetes pills
   ○ Yes, I’m taking both insulin and diabetes pills
   ○ No
90. How would you describe your weight?

- Very underweight
- Slightly underweight
- About the right weight
- Slightly overweight
- Very overweight

91. During the past 30 days, have you done any of the following things at least once to lose or maintain your weight?

<table>
<thead>
<tr>
<th>Action</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>

HIGH SCHOOL YHS QUESTIONNAIRE

Massachusetts
Youth Health Survey

Sponsored by:
Massachusetts Department of Public Health
and
Massachusetts Department of Elementary and Secondary Education

Conducted by:
Center for Survey Research
University of Massachusetts Boston

Winter 2011

Before you begin, there are a few important things you need to know.

- Your answers are completely anonymous. There are no markings anywhere on the questionnaire that allows you to be identified. Please do not place your name or any other personal information on the questionnaire. Your answers will be combined with other answers for statistical analysis.
- The purpose of the survey is to gather information from school students in Massachusetts about health topics such as the use of tobacco, alcohol and drugs, in and out of school activities, diet and exercise and coping with stress. This information will be used to better understand the concerns and health practices of current students.
- It is important that you answer each question as honestly and accurately as you can.
- If there is any question that you would prefer not to answer, please just skip that question and go on to the next question.
- Your participation is, of course voluntary. If you find the survey upsetting, you may stop answering the questions.
- Answer each question by filling in the circles like this: Incorrect marks: ○ ↔ ○ Correct mark: ●
  - You must use a number 2 pencil.
- Arrows (→) will direct you to answer follow-up questions or to skip over certain questions.
- When you are finished with the survey, simply place it in the box located at the front of the class.

Your participation is greatly appreciated, as this is one of the only ways for students like yourself to anonymously report on health issues that may concern you.

Thank you for your time and cooperation
BACKGROUND INFORMATION

1. In what grade are you?
   - 9th grade
   - 10th grade
   - 11th grade
   - 12th grade
   - Other/Ungraded

2. How old are you?
   - 11 years old or younger
   - 12 years old
   - 13 years old
   - 14 years old
   - 15 years old
   - 16 years old
   - 17 years old
   - 18 years old or older

3. What is your sex?
   - Female
   - Male

4. How tall are you without your shoes on?

<table>

11. On how many of the past 7 days did you exercise or participate in physical activity for at least 20 minutes that made you sweat or breathe hard, such as basketball, soccer, running, swimming laps, fast bicycling, fast dancing, or similar aerobic activities?

- 0 Days
- 1 Day
- 2 Days
- 3 Days
- 4 Days
- 5 Days
- 6 Days
- 7 Days

12. During the past 7 days, on how many days were you physically active for a total of at least 60 minutes per day? (Add up all the time you spent in any kind of physical activity that increases your heart rate and makes you breathe hard some of the time.)

- 0 Days
- 1 Day
- 2 Days
- 3 Days
- 4 Days
- 5 Days
- 6 Days
- 7 Days

13. Now think about the last 5 days you were at school. On how many days did you walk, bike, rollerblade or ride a skateboard to get to school or get home from school?

- 0 Days
- 1 Day
- 2 Days
- 3 Days
- 4 Days
- 5 Days

14. Yesterday, how many times did you eat vegetables?

**DEFINITION:**
Count all cooked and uncooked vegetables; salads; and boiled, baked and mashed potatoes.

Do NOT count: French fries, potato chips, or lettuce that is on a sandwich or sub.

- I did not eat vegetables yesterday
- 1 time
- 2 times
- 3 or more times

15. Yesterday, how many times did you eat fruit or drink 100% fruit juice?

- I did not eat fruit or drink 100% fruit juice yesterday
- 1 time
- 2 times
- 3 or more times

16. Yesterday, how many cans or glasses of non-diet soda did you drink?

**DEFINITION:**
A non-diet soda is a soda with sugar in it, such as Coke®, Pepsi®, Sprite®, ginger ale, or root beer.

Count a 20-ounce bottle as 2 glasses.

- I did not drink any non-diet soda yesterday
- 1 can or glass
- 2 cans or glasses
- 3 or more cans or glasses
17. **Yesterday,** how many cans or glasses of flavored drinks did you have?

**DEFINITION:**
Flavored drinks include punch, sports drinks, sweetened iced tea, and other fruit-flavored drinks like Kool Aid and Hawaiian Punch.

Do NOT count 100% fruit juice.

Count a 20-ounce bottle as 2 glasses.

- I did not drink any flavored drinks yesterday
- 1 can or glass
- 2 cans or glasses
- 3 or more cans or glasses

### QUESTIONS ABOUT HOW YOU FEEL

18. **During the past 12 months,** have you felt you needed to talk to someone other than your family about how you were feeling, how things were going in your life, or problems you might have had?

- Yes
- No  **If NO, go to Question 20**

19. **During the past 12 months,** did you talk to any of the following people about things like that?

<table>
<thead>
<tr>
<th></th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. School psychologist or school counselor</td>
<td>☐</td>
<td>☐</td>
</tr>
<tr>
<td>b. School nurse</td>
<td>☐</td>
<td>☐</td>
</tr>
<tr>
<td>c. Psychologist, therapist, or counselor (not in school)</td>
<td>☐</td>
<td>☐</td>
</tr>
<tr>
<td>d. Caseworker or case manager</td>
<td>☐</td>
<td>☐</td>
</tr>
<tr>
<td>e. Youth worker</td>
<td>☐</td>
<td>☐</td>
</tr>
<tr>
<td>f. Priest, minister, rabbi, or other religious leader</td>
<td>☐</td>
<td>☐</td>
</tr>
</tbody>
</table>

20. **During the past 12 months,** did you ever feel so sad or hopeless almost every day for two weeks or more in a row that you stopped doing some usual activities?

- Yes
- No

21. **During the past 12 months,** did you ever seriously consider attempting suicide?

- Yes
- No

22. **During the past 12 months,** how many times did you actually attempt suicide?

- 0 times  **If 0 times, Go to Question 24**
- 1 time
- 2 to 3 times
- 4 to 5 times
- 6 or more times

23. If you attempted suicide during the past 12 months, did any attempt result in an injury, poisoning, or overdose that had to be treated by a doctor or nurse?

- Yes
- No
- I did not attempt suicide

24. **During the past 12 months,** how many times did you hurt or injure yourself **on purpose** without wanting to die? (For example, by cutting, burning, or bruising yourself on purpose.)

- 0 times
- 1 or 2 times
- 3 to 5 times
- 6 to 9 times
- 10 to 19 times
- 20 or more times

### PERSONAL SAFETY

25. **During the past 12 months,** did you suffer a blow or jolt to your head while playing with a sports team (either during a game or during practice) which caused you to get “knocked out”, have memory problems, double or blurry vision, headaches or “pressure” in the head, or nausea or vomiting?

- Yes
- No
- I did not play on a sports team during the past 12 months
26. Do you ever send text messages when you are driving a car?
   - Yes
   - No
   - I do not drive a car

27. During the past 12 months, how many times have you been bullied at school? (Being bullied includes being repeatedly teased, threatened, hit, kicked, or excluded by another student or group of students.)
   - 0 times
   - 1 time
   - 2 or 3 times
   - 4 or 5 times
   - 6 or 7 times
   - 8 or 9 times
   - 10 or 11 times
   - 12 or more times

28. During the past 12 months, have you ever been electronically bullied? (Include being bullied through e-mail, chat rooms, instant messaging, Web sites, or texting.)
   - Yes
   - No

29. Have you ever been hurt physically by a date or someone you were going out with? (Include being hurt by being shoved, slapped, hit, kicked, or forced into sexual activity.)
   - I have never been on a date or gone out with anyone
   - Yes, this has happened to me in the past 12 months
   - Yes, this has happened to me, but longer ago than the past 12 months
   - Yes, this has happened to me in the past 12 months and longer ago than that
   - No, this has not happened to me

30. Has anyone ever had sexual contact with you against your will?
   - Yes
   - No If NO, go to Question 32

31. Who has had sexual contact with you against your will?
   - Yes
   - No
   - a. One or more dating partners or people I was going out with
   - b. One or more family members
   - c. One or more friends
   - d. One or more acquaintances
   - e. One or more strangers

   - d. Have sexual contact with someone who told you "No," objected in some other way, was trying to talk you out of it, or was physically trying to get away from you or avoid your touch

33. How would your parent(s) react if they found out you regularly drank alcohol. Would they be:
   - Extremely Upset
   - Fairly Upset
   - A Little Upset
   - Not Upset at All
34. Do you think most people your age do the following?

<table>
<thead>
<tr>
<th>No</th>
<th>Yes</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Drink alcohol</td>
<td></td>
</tr>
<tr>
<td>b. Smoke cigarettes</td>
<td></td>
</tr>
<tr>
<td>c. Smoke marijuana</td>
<td></td>
</tr>
<tr>
<td>d. Use other illegal drugs</td>
<td></td>
</tr>
<tr>
<td>e. Bully, threaten, or push around other kids</td>
<td></td>
</tr>
</tbody>
</table>

35. During your life, on how many days have you had at least one drink of alcohol?

- 0 days
- 1 or 2 days
- 3 to 9 days
- 10 to 19 days
- 20 to 39 days
- 40 to 99 days
- or more days

36. How old were you when you had your first drink of alcohol other than a few sips?

- I have never had a drink of alcohol other than a few sips  If you have NEVER had alcohol, go to Question 41
- 8 years old or younger
- 9 or 10 years old
- 11 or 12 years old
- 13 or 14 years old
- 15 or 16 years old
- 17 years old or older

37. During the past 30 days, on how many days did you have at least one drink of alcohol?

- 0 days
- 1 or 2 days
- 3 to 5 days
- 6 to 9 days
- 10 to 19 days
- 20 to 29 days
- All 30 days

38. During the past 30 days, on how many days did you have 5 or more drinks of alcohol in a row, that is, within a couple of hours?

- 0 days
- 1 day
- 2 days
- 3 to 5 days
- 6 to 9 days
- 10 to 19 days
- 20 or more days

39. There are many different ways to get beer, wine coolers, wine, or liquor. Which of the following are how you get alcohol?

<table>
<thead>
<tr>
<th>No</th>
<th>Yes</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. I buy it from a supermarket or a convenience store</td>
<td></td>
</tr>
<tr>
<td>b. I buy it from a liquor store or package store</td>
<td></td>
</tr>
<tr>
<td>c. I buy it from bars or clubs or restaurants</td>
<td></td>
</tr>
<tr>
<td>d. I have someone else buy it for me</td>
<td></td>
</tr>
<tr>
<td>e. I get it through my friends</td>
<td></td>
</tr>
<tr>
<td>f. I get it at home</td>
<td></td>
</tr>
<tr>
<td>g. I get it at parties</td>
<td></td>
</tr>
</tbody>
</table>

40. During the past 30 days, how many times did you drive a car or other vehicle when you had been drinking alcohol?

- I do not drive
- 0 times
- 1 time
- 2 or 3 times
- 4 or 5 times
- 6 or more times

41. How much do you think people risk harming themselves (physically or in other ways) if they have five or more drinks in a row?

- No risk
- Slight risk
- Moderate risk
- Great risk
**DRUG QUESTIONS**

The next 3 questions ask about marijuana use. Marijuana also is called grass, pot, weed or reefer. It includes blunts and cigars filled with marijuana.

<table>

   - I borrowed (or bummed) them from someone else
   - A person 18 years old or older gave them to me
   - I took them from a store or family member
   - I got them some other way

69. Do you think that smoking cigarettes makes young people look cool or fit in?
   - Definitely yes
   - Probably yes
   - Probably not
   - Definitely not

70. Do you think that young people who smoke cigarettes have more friends?
   - Definitely yes
   - Probably yes
   - Probably not
   - Definitely not
71. Does anyone who lives with you now smoke cigarettes?
   - Yes
   - No

72. During the past 12 months, have you participated in any community activities to discourage people your age from using cigarettes, chewing tobacco, snuff, dip or cigars?
   - Yes
   - No

73. During the past 7 days, on how many days were you in the same room with someone who was smoking cigarettes?
   - 0 days
   - 1 or 2 days
   - 3 or 4 days
   - 5 or 6 days
   - 7 days

74. During the past 7 days, on how many days did you ride in a car with someone who was smoking cigarettes?
   - 0 days
   - 1 or 2 days
   - 3 or 4 days
   - 5 or 6 days
   - 7 days

75. Have you ever used chewing tobacco, snuff, or dip, such as Redman, Levi Garrett, Beechnut, Skoal, Skoal Bandits or Copenhagen?
   - Yes
   - No If No, go to Question 77

76. During the past 30 days, on how many days did you use chewing tobacco, snuff, or dip?
   - 0 days
   - 1 or 2 days
   - 3 to 5 days
   - 6 to 9 days
   - 10 to 19 days
   - 20 to 29 days
   - All 30 days

77. Have you ever tried smoking cigars, cigarillos, or little cigars, even one or two puffs?
   - Yes
   - No If No, go to Question 79

78. During the past 30 days, on how many days did you smoke cigars, cigarillos, or little cigars?
   - 0 days
   - 1 or 2 days
   - 3 to 5 days
   - 6 to 9 days
   - 10 to 19 days
   - 20 to 29 days
   - All 30 days

79. Have you ever tried any of the following products, even just one time? (You can choose one answer or more than one answer)
   - Roll-your-own cigarettes
   - Flavored cigarettes, such as Camel Crush
   - Clove cigars
   - Tipped cigars, such as Black and Milds
   - Flavored little cigars
   - Smoking tobacco from a hookah or a water pipe
   - Snus, such as Camel or Marlboro Snus
   - Dissolvable tobacco products, such as Ariva, Stonewall, Camelorbs, Camel Sticks, or Camel strips
   - Electronic Cigarettes or E-cigarettes, such as Ruyan or NJOY
   - Some other new tobacco products not listed here
   - I have never tried any of the products listed above or any new tobacco product

80. In the past 30 days, which of the following products have you used on at least one day? (You can choose one answer or more than one answer)
   - Roll-your-own cigarettes
   - Flavored cigarettes, such as Camel Crush
   - Clove cigars
   - Tipped cigars, such as Black and Milds
   - Flavored little cigars
   - Smoking tobacco from a hookah or a water pipe

APPENDIX 4
HIGH SCHOOL YRBS QUESTIONNAIRE

2011 Massachusetts Youth Risk Behavior Survey

This survey is about health behavior. It has been developed so you can
tell us what you do that may affect your health. The information you give
will be used to improve health education for young people like yourself.

DO NOT write your name on this survey. The answers you give will be
kept private. No one will know what you write. Answer the questions
based on what you really do.

Completing the survey is voluntary. Whether or not you answer the
questions will not affect your grade in this class. If you are not
comfortable answering a question, just leave it blank.

The questions that ask about your background will be used only to
describe the types of students completing this survey. The information
will not be used to find out your name. No names will ever be reported.

Make sure to read every question. Fill in the ovals completely. When
you are finished, follow the instructions of the person giving you the
survey.

Thank you very much for your help.
Directions
- Use a #2 pencil only.
- Make dark marks.
- Fill in a response like this: A B D.
- If you change your answer, erase your old answer completely.

1. How old are you?
   A. 12 years old or younger
   B. 13 years old
   C. 14 years old
   D. 15 years old
   E. 16 years old
   F. 17 years old
   G. 18 years old or older

2. What is your sex?
   A. Female
   B. Male

3. In what grade are you?
   A. 9th grade
   B. 10th grade
   C. 11th grade
   D. 12th grade
   E. Ungraded or other grade

4. Are you Hispanic or Latino?
   A. Yes
   B. No

5. What is your race? (Select one or more responses.)
   A. American Indian or Alaska Native
   B. Asian
   C. Black or African American
   D. Native Hawaiian or Other Pacific Islander
   E. White

6. How tall are you without your shoes on?
   Directions: Write your height in the shaded blank boxes. Fill in the matching oval below each number on your answer sheet.

Example

<table>
<thead>
<tr>
<th>Height</th>
</tr>
</thead>
<tbody>
<tr>
<td>Feet</td>
</tr>
<tr>
<td>5</td>
</tr>
<tr>
<td>6</td>
</tr>
<tr>
<td>7</td>
</tr>
<tr>
<td>8</td>
</tr>
</tbody>
</table>

7. How much do you weigh without your shoes on?
   Directions: Write your weight in the shaded blank boxes. Fill in the matching oval below each number on your answer sheet.

Example

<table>
<thead>
<tr>
<th>Weight</th>
</tr>

2011 Massachusetts YRBS
8) During the past 12 months, how would you describe your grades in school?
   A. Mostly A’s
   B. Mostly B’s
   C. Mostly C’s
   D. Mostly D’s
   E. Mostly F’s
   F. None of these grades
   G. Not sure

9) How often do the people in your home speak a language other than English?
   A. Never
   B. Rarely
   C. Sometimes
   D. Most of the time
   E. Always

10) Where do you typically sleep at night?
    A. At home with my parents or guardians
    B. At a friend’s or relative’s home with my parents or guardians
    C. At a friend’s or relative’s home without my parents or guardians
    D. In a supervised shelter with my parents or guardians
    E. In a supervised shelter without my parents or guardians
    F. In a hotel or motel, car, park, campground, or other public place with my parents or guardians
    G. In a hotel or motel, car, park, campground, or other public place without my parents or guardians
    H. Somewhere else

11. Which of the following best describes you?
    A. Heterosexual (straight)
    B. Gay or lesbian
    C. Bisexual
    D. Not sure

12. Do you have any long-term learning disabilities? (Long-term means 6 months or more.)
    A. Yes
    B. No
    C. Not sure

13. Do you have any physical disabilities or long-term health problems? (Long-term means 6 months or more.)
    A. Yes
    B. No
    C. Not sure

14. Is there at least one teacher or other adult in this school that you can talk to if you have a problem?
    A. Yes
    B. No
    C. Not sure

15. Do you agree or disagree that your teachers really care about you and give you encouragement and support?
    A. Strongly agree
    B. Agree
    C. Not sure
    D. Disagree
    E. Strongly disagree

16. Can you talk with at least one of your parents or other adult family members about things that are important to you?
    A. Yes
    B. No
    C. Not sure
The next 3 questions ask about safety.

17. How often do you wear a seat belt when riding in a car driven by someone else?
   A. Never
   B. Rarely
   C. Sometimes
   D. Most of the time
   E. Always

18. During the past 30 days, how many times did you ride in a car or other vehicle driven by someone who had been drinking alcohol?
   A. 0 times
   B. 1 time
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or more times

19. During the past 30 days, how many times did you drive a car or other vehicle when you had been drinking alcohol?
   A. 0 times
   B. 1 time
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or more times

The next 11 questions ask about violence-related behaviors.

20. During the past 30 days, on how many days did you carry a weapon such as a gun, knife, or club?
   A. 0 days
   B. 1 day
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or more days

21. During the past 30 days, on how many days did you carry a gun?
   A. 0 days
   B. 1 day
   C. 2 or 3 days
   D. 4 or 5 days
   E. 6 or more days

22. During the past 30 days, on how many days did you carry a weapon such as a gun, knife, or club on school property?
   A. 0 days
   B. 1 day
   C. 2 or 3 days
   D. 4 or 5 days
   E. 6 or more days

23. During the past 30 days, on how many days did you not go to school because you felt you would be unsafe at school or on your way to or from school?
   A. 0 days
   B. 1 day
   C. 2 or 3 days
   D. 4 or 5 days
   E. 6 or more days

24. During the past 12 months, how many times has someone threatened or injured you with a weapon such as a gun, knife, or club on school property?
   A. 0 times
   B. 1 time
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or 7 times
   F. 8 or 9 times
   G. 10 or 11 times
   H. 12 or more times
25. During the past 12 months, how many times were you in a physical fight?
   A. 0 times
   B. 1 time
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or 7 times
   F. 8 or 9 times
   G. 10 or 11 times
   H. 12 or more times

26. During the past 12 months, how many times were you in a physical fight in which you were injured and had to be treated by a doctor or nurse?
   A. 0 times
   B. 1 time
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or more times

27. During the past 12 months, how many times were you in a physical fight on school property?
   A. 0 times
   B. 1 time
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or 7 times
   F. 8 or 9 times
   G. 10 or 11 times
   H. 12 or more times

28. Have you ever been hurt physically by a date or someone you were going out with? (Include being hurt by being shoved, slapped, hit, or forced into any sexual activity.)
   A. I have never been on a date or gone out with anyone
   B. Yes, I have been hurt physically by a date or someone I was going out with
   C. No, I have not been hurt physically by a date or someone I was going out with

29. Has anyone ever had sexual contact with you against your will?
   A. Yes
   B. No

30. During the past 12 months, have you been a member of a gang?
   A. Yes
   B. No

The next 2 questions ask about bullying.
Bullying is when 1 or more students tease, threaten, spread rumors about, hit, shove, or hurt another student over and over again. It is not bullying when 2 students of about the same strength or power argue or fight or tease each other in a friendly way.

31. During the past 12 months, have you ever been bullied on school property?
   A. Yes
   B. No

32. During the past 12 months, have you ever been electronically bullied (cyber-bullied)? (Include being bullied through e-mail, instant messaging, social networking sites such as Facebook, Twitter or Myspace, or texting.)
   A. Yes
   B. No

The next question asks about hurting yourself on purpose.

33. During the past 12 months, how many times did you do something to purposely hurt yourself without wanting to die, such as cutting or burning yourself on purpose?
   A. 0 times
   B. 1 time
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or more times
The next 5 questions ask about sad feelings and attempted suicide. Sometimes people feel so depressed about the future that they may consider attempting suicide that is, taking some action to end their own life.

34. During the past 12 months, did you ever feel so sad or hopeless almost every day for **two weeks or more in a row** that you stopped doing some usual activities?
   A. Yes
   B. No

35. During the past 12 months, did you ever **seriously** consider attempting suicide?
   A. Yes
   B. No

36. During the past 12 months, did you make a plan about how you would attempt suicide?
   A. Yes
   B. No

37. During the past 12 months, how many times did you actually attempt suicide?
   A. 0 times
   B. 1 time
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or more times

38. **If you attempted suicide** during the past 12 months, did any attempt result in an injury, poisoning, or overdose that had to be treated by a doctor or nurse?
   A. I **did not attempt suicide** during the past 12 months
   B. Yes
   C. No

The next 8 questions ask about tobacco use.

39. Have you ever tried cigarette smoking, even one or two puffs?
   A. Yes
   B. No

40. How old were you when you smoked a whole cigarette for the first time?
   A. I have never smoked a whole cigarette
   B. 8 years old or younger
   C. 9 or 10 years old
   D. 11 or 12 years old
   E. 13 or 14 years old
   F. 15 or 16 years old
   G. 17 years old or older

41. During the past 30 days, on how many days did you smoke cigarettes?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

42. During the past 30 days, on how many days did you smoke cigarettes **on school property**?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

43. Have you ever smoked cigarettes daily, that is, at least one cigarette every day for 30 days?
   A. Yes
   B. No
44. During the past 12 months, did you ever try to quit smoking cigarettes?
   A. I did not smoke during the past 12 months
   B. Yes
   C. No

45. During the past 30 days, on how many days did you use chewing tobacco, snuff, dip, or snus, such as Redman, Levi Garrett, Beechnut, Skoal, Skoal Bandits, or Copenhagen?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

46. During the past 30 days, on how many days did you smoke cigars, cigarillos, or little cigars?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

47. During your life, on how many days have you had at least one drink of alcohol?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 9 days
   D. 10 to 19 days
   E. 20 to 39 days
   F. 40 to 99 days
   G. 100 or more days

48. How old were you when you had your first drink of alcohol other than a few sips?
   A. I have never had a drink of alcohol other than a few sips
   B. 8 years old or younger
   C. 9 or 10 years old
   D. 11 or 12 years old
   E. 13 or 14 years old
   F. 15 or 16 years old
   G. 17 years old or older

49. During the past 30 days, on how many days did you have at least one drink of alcohol?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

The next 5 questions ask about drinking alcohol. This includes drinking beer, wine, wine coolers, hard lemonade or hard cider, and liquor such as rum, gin, vodka, or whiskey. For these questions, drinking alcohol does not include drinking a few sips of wine for religious purposes.
50. During the past 30 days, on how many days did you have 5 or more drinks of alcohol in a row, that is, within a couple of hours?
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 to 5 days
   E. 6 to 9 days
   F. 10 to 19 days
   G. 20 or more days

51. During the past 30 days, on how many days did you have at least one drink of alcohol on school property?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

The next 4 questions ask about marijuana use. Marijuana also is called grass, pot, weed, or reefer.

52. During your life, how many times have you used marijuana?
   A. 0 times
   B. 1 or 2 times
   C. 3 to 9 times
   D. 10 to 19 times
   E. 20 to 39 times
   F. 40 to 99 times
   G. 100 or more times

53. How old were you when you tried marijuana for the first time?
   A. I have never tried marijuana
   B. 8 years old or younger
   C. 9 or 10 years old
   D. 11 or 12 years old
   E. 13 or 14 years old
   F. 15 or 16 years old
   G. 17 years old or older

54. During the past 30 days, how many times did you use marijuana?
   A. 0 times
   B. 1 or 2 times
   C. 3 to 9 times
   D. 10 to 19 times
   E. 20 to 39 times
   F. 40 or more times

55. During the past 30 days, how many times did you use marijuana on school property?
   A. 0 times
   B. 1 or 2 times
   C. 3 to 9 times
   D. 10 to 19 times
   E. 20 to 39 times
   F. 40 or more times

The next 8 questions ask about cocaine, ecstasy, and other drugs.

56. During your life, how many times have you used any form of cocaine, including powder, crack, or freebase?
   A. 0 times
   B. 1 or 2 times
   C. 3 to 9 times
   D. 10 to 19 times
   E. 20 to 39 times
   F. 40 or more times

57. During your life, how many times have you used ecstasy (also called MDMA)?
   A. 0 times
   B. 1 or 2 times
   C. 3 to 9 times
   D. 10 to 19 times
   E. 20 to 39 times
   F. 40 or more times

</table>
| 67. Have you ever had sexual intercourse? | A. Yes  
B. No |
68. How old were you when you had sexual intercourse for the first time?
   A. I have never had sexual intercourse
   B. 11 years old or younger
   C. 12 years old
   D. 13 years old
   E. 14 years old
   F. 15 years old
   G. 16 years old
   H. 17 years old or older

69. During your life, with how many people have you had sexual intercourse?
   A. I have never had sexual intercourse
   B. 1 person
   C. 2 people
   D. 3 people
   E. 4 people
   F. 5 people
   G. 6 or more people

70. During the past 3 months, with how many people did you have sexual intercourse?
   A. I have never had sexual intercourse
   B. I have had sexual intercourse, but not during the past 3 months
   C. 1 person
   D. 2 people
   E. 3 people
   F. 4 people
   G. 5 people
   H. 6 or more people

71. Did you drink alcohol or use drugs before you had sexual intercourse the last time?
   A. I have never had sexual intercourse
   B. Yes
   C. No

72. The last time you had sexual intercourse, did you or your partner use a condom?
   A I have never had sexual intercourse
   B Yes
   C No

73. The last time you had sexual intercourse, what one method did you or your partner use to prevent pregnancy? (Select only one response.)
   A I have never had sexual intercourse
   B No method was used to prevent pregnancy
   C Birth control pills
   D Condoms
   E Depo-Provera (or any injectable birth control), Nuva Ring (or any birth control ring), Implanon (or any implant), or any IUD
   F Withdrawal
   G Some other method
   H Not sure

74. During your life, with whom have you had sexual contact?
   A I have never had sexual contact
   B Females
   C Males
   D Females and males

75. How many times have you been pregnant or gotten someone pregnant?
   A 0 times
   B 1 time
   C 2 or more times
   D Not sure
76. Have you ever been tested for HIV, the virus that causes AIDS? (Do not count tests done if you donated blood.)
   A. Yes
   B. No
   C. Not sure

77. Have you ever been tested for other sexually transmitted diseases (STDs) such as genital herpes, chlamydia, syphilis, or genital warts?
   A. Yes
   B. No
   C. Not sure

78. Have you ever been told by a doctor or nurse that you had HIV infection or any other sexually transmitted disease (STD)?
   A. Yes
   B. No
   C. Not sure

The next 5 questions ask about body weight.

79. How do you describe your weight?
   A. Very underweight
   B. Slightly underweight
   C. About the right weight
   D. Slightly overweight
   E. Very overweight

80. Which of the following are you trying to do about your weight?
   A. Lose weight
   B. Gain weight
   C. Stay the same weight
   D. I am not trying to do anything about my weight

81. During the past 30 days, did you go without eating for 24 hours or more (also called fasting) to lose weight or to keep from gaining weight?
   A. Yes
   B. No

82. During the past 30 days, did you take any diet pills, powders, or liquids without a doctor’s advice to lose weight or to keep from gaining weight? (Do not include meal replacement products such as Slim Fast.)
   A. Yes
   B. No

83. During the past 30 days, did you vomit or take laxatives to lose weight or to keep from gaining weight?
   A. Yes
   B. No

The next 8 questions ask about food you ate or drank during the past 7 days. Think about all the meals and snacks you had from the time you got up until you went to bed. Be sure to include food you ate at home, at school, at restaurants, or anywhere else.

84. During the past 7 days, how many times did you eat fruit or drink 100% fruit juices? (Do not count punch, Kool-Aid, sports drinks, or other fruit-flavored drinks.)
   A. I did not eat fruit or drink 100% fruit juice during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day
85. During the past 7 days, how many times did you eat green salad?
A. I did not eat green salad during the past 7 days
B. 1 to 3 times during the past 7 days
C. 4 to 6 times during the past 7 days
D. 1 time per day
E. 2 times per day
F. 3 times per day
G. 4 or more times per day

86. During the past 7 days, how many times did you eat potatoes? (Do not count french fries, fried potatoes, or potato chips.)
A. I did not eat potatoes during the past 7 days
B. 1 to 3 times during the past 7 days
C. 4 to 6 times during the past 7 days
D. 1 time per day
E. 2 times per day
F. 3 times per day
G. 4 or more times per day

87. During the past 7 days, how many times did you eat other vegetables such as carrots, peas, or broccoli? (Do not count green salad or potatoes.)
A. I did not eat other vegetables during the past 7 days
B. 1 to 3 times during the past 7 days
C. 4 to 6 times during the past 7 days
D. 1 time per day
E. 2 times per day
F. 3 times per day
G. 4 or more times per day

88. During the past 7 days, how many times did you drink a can, bottle, or glass of soda or pop, such as Coke, Pepsi, or Sprite? (Do not include diet soda or diet pop.)
A. I did not drink soda or pop during the past 7 days
B. 1 to 3 times during the past 7 days
C. 4 to 6 times during the past 7 days
D. 1 time per day
E. 2 times per day
F. 3 times per day
G. 4 or more times per day

89. During the past 7 days, how many glasses of milk did you drink? (Count the milk you drank in a glass or a cup, from a carton, or with cereal. Count the half pint of milk served at school as equal to one glass.)
A. I did not drink milk during the past 7 days
B. 1 to 3 glasses during the past 7 days
C. 4 to 6 glasses during the past 7 days
D. 1 glass per day
E. 2 glasses per day
F. 3 glasses per day
G. 4 or more glasses per day

90. During the past 7 days, on how many days did you eat breakfast?
A. 0 days
B. 1 day
C. 2 days
D. 3 days
E. 4 days
F. 5 days
G. 6 days
H. 7 days
91. Have you been taught in school about how to choose foods that will keep you healthy and how to eat a balanced, nutritious diet?
   A. Yes
   B. No
   C. Not sure

The next 5 questions ask about physical activity.

92. During the past 7 days, on how many days were you physically active for a total of at least 60 minutes per day? (Add up all the time you spent in any kind of physical activity that increased your heart rate and made you breathe hard some of the time.)
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days
   G. 6 days
   H. 7 days

93. On how many of the past 7 days did you exercise or participate in physical activity for at least 20 minutes that made you sweat and breathe hard, such as basketball, soccer, running, swimming laps, fast bicycling, fast dancing, or similar aerobic activities?
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days
   G. 6 days
   H. 7 days

94. In an average week when you are in school, on how many days do you go to physical education (PE) classes?
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days

95. During the past 12 months, on how many sports teams did you play? (Count any teams run by your school or community groups.)
   A. 0 teams
   B. 1 team
   C. 2 teams
   D. 3 or more teams

96. Have you ever been taught in school how to follow a personal fitness plan, including setting fitness goals for yourself and keeping track of your progress?
   A. Yes
   B. No
   C. Not sure

The last 3 questions ask about how you spend your free time.

97. On an average school day, how many hours do you watch TV?
   A. I do not watch TV on an average school day
   B. Less than 1 hour per day
   C. 1 hour per day
   D. 2 hours per day
   E. 3 hours per day
   F. 4 hours per day
   G. 5 or more hours per day
98. On an average school day, how many hours do you play video or computer games or use a computer for something that is not school work? (Include activities such as Xbox, PlayStation, Nintendo DS, iPod touch, Facebook, and the Internet.)
   A. I do not play video or computer games or use a computer for something that is not school work
   B. Less than 1 hour per day
