COMPLIANCE CHECKLIST

IP16: Interventional Imaging

The following checklist is intended to be used in the plan review applications for health care facilities submitted to the Massachusetts Department of Public Health. This checklist summarizes and references the applicable requirements from the Licensure Regulations and the 2014 Edition of the FGI Guidelines for Design and Construction of Hospitals and Outpatient Facilities. Applicants must verify compliance of the plans submitted to the Department with all referenced requirements from the Licensure Regulations and FGI Guidelines when completing this Checklist. A separate Checklist must be completed for each nursing unit, hospital or clinic department, or clinical suite.

Other jurisdictions, regulations and codes may have additional requirements which are not included in this checklist, such as:
- State Building Code (780 CMR)
- Joint Commission on the Accreditation of Health Care Organizations
- CDC Guidelines for Preventing the Transmission of Mycobacterium Tuberculosis in Health Care Facilities
- USP 797
- Accessibility Guidelines of the Americans with Disabilities Act (ADA)
- Architectural Access Board Regulations (521 CMR)
- Local Authorities having jurisdiction.

Instructions:
1. All requirement lines must be completed according to the following instructions and included in the plan submissions for Self-Certification Process or Part II of the Abbreviated Review Process.
2. This checklist must be completed by the project architect or engineer based on the design actually reflected in the plans at the time of completion of the checklist.
3. Each requirement line (___) of this Checklist must be completed exclusively with one of the following symbols, unless otherwise directed in the checklist. If a functional space is not affected by a renovation project, the symbol “E” may be indicated on the requirement line (___) before the name of the functional space (associated requirements on indented lines below that name, or associated MEP requirements do not have to be completed in this case). If more than one functional space serves a given required function (e.g. patient room or exam room), that clarification should be provided in the Project Narrative, and the requirement lines are understood to only address the functional spaces that are involved in the project.

X = Requirement is met, for new space, for renovated space, or for existing direct support space for an expanded service.

E = Requirement relative to an existing suite or area that has been licensed for its designated function, is not affected by the construction project and does not pertain to a required direct support space for the specific service affected by the project.

W = Waiver requested for specific section of the Regulations or FGI Guidelines, where hardship in meeting requirement can be demonstrated (a Physical Plant Waiver Form must be completed for each waiver request).

4. All room functions marked with "X" must be shown on the plans with the same name labels as in this checklist.
5. Mechanical, electrical & plumbing requirements are only partially mentioned in this checklist. The relevant section of the FGI Guidelines must be used for project compliance with all MEP requirements and for waiver references.
6. Oxygen, vacuum, medical air, and waste anesthesia gas disposal outlets (if required) are identified respectively by the abbreviations "OX", "VAC", "MA", & "WAGD".
7. Requirements referenced with "FI" result from formal interpretations from the FGI Interpretations Task Group.
8. The location requirements including asterisks (*) refer to the definitions of the Glossary in the beginning section of the FGI Guidelines.

</table>

### Building Systems Requirements

**Ventilation:**

- Anesthetic gases are not used
  - Min. 15 air changes per hour
  - Positive pressure
  - No recirculating room units

- Anesthetic gases are used
  - Min. 20 air changes per hour
  - Positive pressure
  - No recirculating room units
  - Airflow unidirectional, downwards & average velocity of diffusers 25-35 cfm/ft²
  - Diffusers concentrated to provide airflow pattern over patient & surgical team
  - Area of primary supply diffuser array extends min. 12" beyond footprint of surgical table on each side
  - No more than 30% of primary supply diffuser array area used for ceiling mounted equipment
  - At least 2 low sidewall return or exhaust grilles on opposite corners or as far apart as possible, with bottom of these grilles installed approximately 8" above floor

- Space ventilation & pressure relationship requirements of Table 7.1 maintained in event of loss of normal electrical power in procedure rooms

**Power:**

- Total 12 receptacles
  - 8 receptacles convenient to operating table
  - 1 receptacle on each wall
  - Selected circuits on emergency power

Building Systems Requirements

Power:
- Total 12 receptacles
- 8 receptacles convenient to operating table
- 1 receptacle on each wall
- Selected circuits on emergency power

Table 2.1-1

Nurse Call System:
- Emergency staff assistance station
- Code call station

Table 2.1-2

Medical Gases:
- 2 OX, 2 VAC, 1 MA

Table 2.1-4

2.2-3.5.3 PRE-PROCEDURE & RECOVERY PATIENT CARE AREAS FOR OTHER MODALITIES THAN CARDIAC CATH OR EP

☐ check if not included in project

- Pre-procedure & recovery area or room

2.2-3.5.3.1

(2) immediately accessible* to procedure rooms

☐ separate from corridors

(3) arranged to permit visual observation by staff before & after procedure

2.2-3.5.3.2 Space Requirements:

- Patient bays* ☐ check if not included in project

- min. clear floor area 60 sf

- 4’-0” between sides of patient beds/stretchers

- 3’-0” between sides of patient beds/stretchers & adjacent walls or partitions

- Patient cubicles* ☐ check if not included in project

- min. clear floor area 80 sf

- min. clearance 3’-0” between sides & foot of lounge chairs/stretchers & adjacent walls or partitions

- provisions such as cubicle curtains used for patient privacy

2.1-2.6.5.3 Handwashing Stations:

(1) at least 1 handw. station for every 4 patient care stations or fewer & for each major fraction thereof

☐ evenly distributed

(2) provide uniform distance from two patient care stations farthest from handwashing station
Architectural Requirements

PRE-PROCEDURE & RECOVERY PATIENT CARE AREAS FOR CARDIAC CATH & EP

☐ check if not included in project

130.960(B)/3.7-3.4.3

1. Pre-procedure & recovery area or room
   □ directly accessible from procedure room

(1)(b) Size:
   □ min. ratio 1.5 recovery patient care stations per procedure room

(2) Space Requirements:
   □ min. clear floor area 80 sf for each patient bay or cubicle
   □ min. clearance 5'-0" between patient stretchers or beds
   □ min. clearance 4'-0" between patient stretchers or beds & adjacent walls or other fixed elements (at sides & foot)
   □ min. clearance 3'-0" from the foot of the stretcher or bed to curtain

(4) provisions for patient privacy such as cubicle curtains

(1)(c) Pediatric Service:
   ☐ check if not included in project
   □ pediatric recovery stations
   □ separate from adult stations
   □ pediatric recovery stations provide space for parents
   □ pediatric recovery stations visible from nurse station

(5) □ handwashing stations

3.1-3.6.5.1 □ located in each room where hands-on patient care is provided

3.1-3.6.5.3 Handwashing Stations Serving Multiple Patient Care Stations:
   ☐ check if not included in project

(1) □ min. 1 handw. station for every 4 patient care stations or fewer & for each major fraction thereof evenly distributed & provide uniform distance from two patient care stations farthest from handwashing station

2.2-3.5.6 SUPPORT AREAS FOR INTERVENTIONAL IMAGING SERVICES

2.2-3.5.6.1 □ Control room or area

(2) □ shielded view window permits direct observation of patient from control console

(3) □ shielded control room configured to prevent radiation exposure into occupied areas of control room

(4) □ separated from procedure room by door

Building Systems Requirements

Ventilation:
   □ Min. 6 air changes per hour
   □ No recirculating room units

Power:
   □ 8 receptacles convenient to head of stretcher

Nurse Call System:
   □ Emergency staff assistance station
   □ Code call station

Medical Gases:
   □ 1 OX, 1 VAC

</thead>
<tbody>
<tr>
<td>2.2-3.5.7.1</td>
<td>Staff changing area</td>
</tr>
</tbody>
</table>
2.1-7.2.2.1 NFPA 101

___ Aisles, corridors & ramps required for exit access in a hospital not less than 8'-0" in clear & unobstructed width

or

___ Code Review Sheet establishing compliance with NFPA 101 has been submitted

___ Aisles, corridors & ramps in adjunct areas not intended for the housing, treatment, or use of inpatients not less than 44" in clear width

2.1-7.2.2.2 CEILING HEIGHT:

(1) ___ Min. ceiling height 7'-6" in corridors & normally unoccupied spaces

(2) ___ Min. height 7'-0" in procedure rooms from floor to lowest protruding element of equipment or fixture in stowed position

(4) ___ Min. height 7'-6" above floor of suspended tracks, rails & pipes located in traffic path for patients in beds and/or on stretchers

___ Min. ceiling height 7'-10" in other areas

2.1-7.2.2.3 DOORS & DOOR HARDWARE:

(1) ___ Doors between corridors, rooms, or spaces subject to occupancy swing type or sliding doors

(b) ___ Sliding doors

☐ check if not included in project

___ manual or automatic sliding doors comply with NFPA 101

☐ code review sheet attached

___ no floor tracks

(2) ___ Min. 45.5" clear door width for diagnostic/treatment areas

___ Min. 83.5" clear door height for diagnostic/treatment areas

(b) ___ Swinging doors for personnel use in addition to sliding doors

☐ check if not included in project

___ min. clear width 34.5"

(3) ___ Doors do not swing into corridors (except doors to non-occupiable spaces & doors with emergency breakaway hardware)

(4) ___ Lever hardware

(b) ___ Doors for patient toilet facilities

(a) ___ 2 doors separated by horizontal distance equal to one-half length of max. diagonal room dimension

or

___ door that swings outward

or

___ door equipped with emergency rescue hardware

or

___ sliding door

(5) ___ toilet room door opening in public area or corridor maintains visual privacy

2.1-7.2.2.7 GLAZING MATERIALS:

(4) ___ Glazing within 18" of floor

☐ check if not included in project

___ safety glass, wire glass or plastic break-resistant material

2.1-7.2.2.8 HANDWASHING STATIONS:

(1) ___ Handwashing stations in patient care areas located to be visible & unobstructed

(3) ___ Anchoring suitable for vertical or horizontal force of 250 lbs.

(4) ___ Handwashing Station Countertops:

☐ check if not included in project

(a) ___ porcelain, stainless steel or solid surface materials

(b) ___ plastic laminate countertops

☐ check if not included in project

___ substrate marine-grade plywood (or equivalent) with impervious seal

(5) ___ Designed to prevent storage beneath sink

(6) ___ provisions for drying hands

(a) ___ hand-drying device does not require hands to contact dispenser

(d) ___ directly accessible* to sinks

(7) ___ Liquid or foam soap dispensers
2.1-7.2.9 GRAB BARS:
(2) Grab bars anchored to sustain concentrated load of 250 lbs.

2.1-7.2.10 HANDRAILS:
(1) Handrails installed on both sides of patient use corridors
(3) Rail ends return to wall or floor
(4) Smooth non-textured surface free of rough edges
(5) Eased edges & corners
(6) Finishes cleanable

2.1-7.2.11 RADIATION PROTECTION:
☐ check if no radiation emitting equipment is included in project
☐ Protection for X-ray & Gamma-ray installations are shown in the plans
☐ Documentation for radiation protection has been submitted separately to the DPH Radiation Control Program

2.1-7.2.12 NOISE CONTROL:
(1) Recreation rooms, exercise rooms, equipment rooms & similar spaces with potential impact noises are not located directly over operating suites
(2) Partitions, floors & ceiling construction in patient areas conform to Table 1.2-6

2.1-7.2.3 SURFACES

2.1-7.2.3.1 FLOORING & WALL BASES:
(1) Selected flooring surfaces cleanable & wear-resistant for location
(2) Smooth transitions between different flooring materials
(3) Flooring surfaces, including those on stairways, stable, firm & slip-resistant
(b) Carpet
☐ check if not included in project
☐ provides stable & firm surface
(4) Floors & wall bases of soiled workrooms, toilet rooms & other wet cleaned areas are not physically affected by cleaning solutions

2.1-7.2.3.2 WALLS & WALL PROTECTION:
(1) Washable wall finishes
(b) Wall finishes near plumbing fixtures smooth, scrubbable & water-resistant
(2) Monolithic wall surfaces in areas routinely subjected to wet spray or splatter
(5) No sharp, protruding corners

2.1-7.2.3.3 CEILINGS:
(1) Ceilings in areas occupied by patients, in clean rooms & soiled rooms:
☐ cleanable with routine housekeeping equipment
☐ acoustic & lay-in ceilings
☐ check if not included in project
☐ do not create ledges or crevices
(3) Ceiling finishes in semi-restricted areas smooth, scrubable, non-absorptive, non-perforated
(a) lay-in ceiling
☐ check if not included in project
☐ ceiling tiles gasketed or
☐ each ceiling tile weighs at least one pound per square foot
(b) no perforated, tegular, serrated, cut, or highly textured tiles
(4) Ceiling in restricted areas:
(a) monolithic construction
☐ no cracks or perforations
(b) ceiling finishes scrubbable
(c) gasketed access openings

2.1-8.2 HEATING, VENTILATION, & AIR-CONDITIONING (HVAC) SYSTEMS

4/6.3.1 Outdoor Air Intakes:
4/6.3.1.1 Located min. 25 feet from cooling towers & all exhaust & vent discharges
☐ Bottom of air intake is at least 6'-0" above grade
4/6.3.1.2 Roof Mounted Air Intakes:
☐ check if not included in project
☐ bottom min. 3'-0" above roof level

4/6.4 Filtration:
☐ Filter banks conform to Table 6.4
4/6.4.1 Filter Bank #1 placed upstream of heating & cooling coils
4/6.4.2 Filter Bank No. 2 installed downstream of cooling coils & supply fan
4/6.7 Air Distribution Systems:
4/6.7.1 Ducted return or exhaust systems in spaces listed in Table 7.1 with required pressure relationships
4/6.7.1 Ducted return or exhaust systems in recovery rooms
4/6.7.1 Ducted return or exhaust systems in inpatient care areas

4/6.7.3 Smoke & Fire barriers:
4/6.7.3 HVAC zones coordinated with compartmentation to minimize ductwork penetrations of fire & smoke barriers

4/6.8 Energy Recovery Systems:
4/6.8.2 Exhaust systems serving potentially contaminated rooms are not used for energy recovery

4/6.9 Duct Lining:
4/6.9 No duct lining in ductwork located downstream of Filter Bank #2

4/7 Space Ventilation:
4/7.1 Spaces ventilated per Table 7.1
4/7.1 Air movement from clean areas to less clean areas
4/7.1 Min. number of total air changes indicated either supplied for positive pressure rooms or exhausted for negative pressure rooms
4/7.1 Recirculating room HVAC units
4/7.4.3 Imaging Procedure Rooms:

2.1-8.2.1.2 Ventilation & Space-Conditioning:
(1) All rooms & areas used for patient care have provisions for ventilation
(2) Mechanical ventilation provided for all rooms & areas in facility in accordance with Table 7.1 of Part 4

2.1-8.2.3.1 Exhaust Systems:
(1) Room routinely used for administering inhalation anesthesia & inhalation analgesia
(a) anesthesia scavenging system
(b) check if not included in project
(c) gas-collecting system arranged so as not to disturb patients respiratory systems

2.1-8.3 ELECTRICAL SYSTEMS
2.1-8.3.2 ELECTRICAL DISTRIBUTION & TRANSMISSION
2.1-8.3.2.1 Switchboards Locations:
(1) Located in areas separate from piping & plumbing equipment
(a) Not located in rooms they support
(b) Accessible to authorized persons only
(c) Located in dry, ventilated space free of corrosive gases or flammable material

2.1-8.3.2.2 Panelboards:
(1) Panelboards serving life safety branch emergency circuits only serve same floor, floor above & floor below
(2) Panelboards serving critical branch emergency circuits only serve same floor
(3) New panelboards not located in exit enclosures

2.1-8.3.2.3 Ground-Fault Circuit Interrupters in Critical Care Areas:
(2) Provisions made to ensure that essential equip is not affected by activation of one interrupter
### 2.1-8.3.1 EMERGENCY ELECTRICAL SERVICE
1. Emergency power per NFPA 99, NFPA 101 & NFPA 110

### 2.1-8.3.5 ELECTRICAL EQUIPMENT
2.1-8.3.5.2 Required handwashing station or scrub sink tied to building electrical service
- [ ] check if not included in project
- [ ] connected to essential electrical system

### 2.1-8.3.6 ELECTRICAL RECEPTACLES
2.1-8.3.6.2 Receptacles in Patient Care Areas:
- [ ] receptacles provided according to Table 2.1-1

### 2.1-8.3.7 CALL SYSTEMS
2.1-8.3.7.1 Nurse call system locations
- [ ] provided as required in Table 2.1-2

2.1-8.3.7.2 Nurse call systems report to attended location with electronically supervised visual & audible signals

2.1-8.3.7.3 Call systems meet requirements of UL 1069 Standard for Hospital Signaling & Nurse Call Equipment

2.1-8.3.7.4 Wireless system
- [ ] check if not included in project

2.1-8.3.7.5 Bath Stations:
- [ ] provided at each patient toilet
- [ ] alarm turned off only at bath station where it was initiated
- [ ] located to side of toilets within 12” of front of toilet bowl & 3'-0" to 4'-0" above floor

2.1-8.3.7.6 Staff emergency stations for summoning local staff assistance for non-life-threatening situations at each patient care location

2.1-8.3.7.7 Code call station equipped with continuous audible or visual signal at point of origin

### 2.1-8.3.8 PLUMBING & OTHER PIPING SYSTEMS
2.1-8.4.2 Plunging Potable Water Distribution Systems:
2.1-8.4.2.5 Heated Potable Water Distribution Systems:
- [ ] systems serving patient care areas are under constant recirculation
- [ ] non-recirculated fixture branch piping does not exceed 25'-0" in length
- [ ] no dead-end piping
- [ ] water-heating system has supply capacity at minimum temperatures & amounts indicated in Table 2.1-3

2.1-8.4.2.6 Handwashing stations supplied as required above

### 2.1-8.4.3 PLUMBING FIXTURES
2.1-8.4.3.1 Materials material used for plumbing fixtures non-absorptive & acid resistant

2.1-8.4.3.2 Handwashing Station Sinks:
- [ ] basins reduce risk of splashing to areas where direct patient care is provided, sterile procedures are performed & medications are prepared
- [ ] basin min. 144 square inches
- [ ] min. dimension 9 inches
- [ ] made of porcelain, stainless steel, or solid-surface materials
- [ ] water discharge point of faucets at least 10 inches above bottom of basin
- [ ] anchoring for sinks withstands min. vertical or horizontal force of 250 lbs.
- [ ] fittings operated without using hands for sinks used by medical & nursing staff, patients, public & food handlers
### Compliance Checklist: Interventional Imaging
