

EZEKIAL POND
PLYMOUTH

AREA = 36 ACRES

Ezekiel Pond

Plymouth

Plymouth County

Buzzards Bay Watershed

36 Acres

Depth: 8 Feet Average

19 Feet Maximum

Primary Gamefish:

Largemouth Bass

General Information:

Ezekiel Pond is a small, 36-acre pond with an average depth of 8 feet and a maximum depth of 19 feet. Transparency is about 13 feet and submerged vegetation is common. The water is known to be very acidic. The one mile of shoreline is developed with year round residences and summer cottages.

Access:

Since Ezekiel Pond is considered a great pond under the Colonial Ordinances of 1641-1647, anglers can pass on foot on unimproved land to access the pond for fishing. Anglers may be able to find parking along Bourne Road and pass on foot over unimproved land to gain entry.

Management History:

The pond was reclaimed in 1952, and again in 1958.

Fish Populations:

The pond was last surveyed in the summer of 1994, when it was found to support yellow perch, bluegill, largemouth bass, brown bullhead, pumpkinseed, chain pickerel and banded killifish.

Fishing:

Abundant populations of yellow perch and largemouth bass offer attractive fishing opportunities, which are also provided to a lesser extent by chain pickerel and brown bullhead. Another nearby water worth a visit is Big Sandy Pond.
