CPR Program Awards

**Town of Cohasset**

*Design and Implementation of Stormwater BMPs within the James Brook Watershed*

*Award: $46,430.00*

This project will design and install bioretention systems throughout the James Brook and Jacobs’s meadow watershed to improve the water quality of Cohasset Cove and Harbor. The project is part of a comprehensive effort to mitigate water quality and flooding issues that includes the Jacob’s Meadow salt marsh restoration project, a priority project of CZM’s Wetland Restoration Program.

**Town of Provincetown**

*Design and Construction of Vessel Sewage Pumpout Facility at MacMillan Pier*

*Award: $93,800.00*

This project will design and install a vessel sewage pumpout facility to serve commercial and recreational vessels in Provincetown Harbor. The project is essential for the designation of a No Discharge Area in Cape Cod Bay.

**Town of Duxbury**

*Halls Corner BMP Construction*

*Award: $118,699.00*

This project is the final phase of an effort to mitigate bacterial contamination to the Nook, a portion of Kingston Bay that is currently closed to shellfishing. The proponents will install infiltration BMPs along a major roadway adjacent to the Bay. At the completion of this project, CZM will encourage the town and DMF to reassess the shellfish growing area and potentially reclassify closed or conditionally approved portions of the Bay, as appropriate.
**Town of Dennis**  
*Design and Construction of Vessel Sewage Pumpout Facility at Sesuit Harbor, Dennis, Massachusetts*  
*Award: $22,500.00*

This project will design and construct a vessel sewage pumpout facility in Sesuit Harbor on Cape Cod Bay. The project is essential for the designation of a No Discharge Area in Cape Cod Bay.

**Town of Brewster**  
*Stony Brook Stormwater Improvements*  
*Award: $21,057.00*

This project includes the design and permitting of a series of stormwater BMPs for the mitigation of contaminated stormwater discharges to Stony Brook, the Paines Creek estuary, and Cape Cod Bay. The project follows on a stormwater assessment of this watershed funded by a Coastal NPS grant in FY07.

**Town of Weymouth**  
*Assessment and Design of Stormwater Mitigation for Weymouth’s Herring Brook*  
*Award: $25,930.00*

This project will identify and design a series of stormwater management retrofits for Weymouth’s Herring Brook. The project will mitigate impacts to downstream shellfish beds and improve habitat for important diadromous fish that migrate and spawn in the Herring Brook watershed.

**Town of Bourne**  
*Conservation Pond Stormwater Implementation Project*  
*Award: $66,815.00*

The Town of Bourne will design and construct stormwater BMPs to mitigate bacterial contamination of Conservation Pond, the suspected cause of shellfish closures in Hen Cove, Buzzards Bay. The project follows on a number of efforts to identify and remediate stormwater pollution to the pond, some funded by past CPR grant rounds. At the completion of this project, CZM will encourage the town and DMF to reassess the shellfish growing area and potentially reclassify closed portions of Hen Cove, as appropriate.
