fCOMPLIANCE CHECKLIST

IP7 Neonatal Intensive Care Unit

The following checklist is intended to be used in the plan review applications for health care facilities submitted to the Massachusetts Department of Public Health. This checklist summarizes and references the applicable requirements from the Licensure Regulations and the 2018 Edition of the FGI Guidelines for Design and Construction of Hospitals. Applicants must verify compliance of the plans submitted to the Department with all referenced requirements from the Licensure Regulations and FGI Guidelines when completing this Checklist. A separate Checklist must be completed for each nursing unit, hospital or clinic department, or clinical suite.

Other jurisdictions, regulations and codes may have additional requirements which are not included in this checklist, such as:
- State Building Code (780 CMR)
- Accreditation requirements of The Joint Commission
- CDC Guidelines for Preventing the Transmission of Mycobacterium Tuberculosis in Health Care Facilities
- USP 797 & Regulations of the Massachusetts Board of Registration in Pharmacy
- Occupational Safety & Health Standards (OSHA)
- Accessibility Guidelines of the Americans with Disabilities Act (ADA)
- Architectural Access Board Regulations (521 CMR)
- Local Authorities having jurisdiction.

Instructions:
1. All requirement lines must be completed according to the following instructions and included in the plan submissions for Self-Certification Process or Abbreviated Review Process.
2. This checklist must be completed by the project architect or engineer based on the design actually reflected in the plans at the time of completion of the checklist.
3. Each requirement line (___) of this Checklist must be completed exclusively with one of the following marks, unless otherwise directed in the checklist. If a functional space is not affected by a renovation project, the mark “E” may be indicated on the requirement line (___) before the name of the functional space (associated requirements on indented lines below that name, or associated MEP requirements do not have to be completed in this case). If more than one functional space serves a given required function (e.g. patient room or exam room), that clarification should be provided in the Project Narrative, and the requirement lines are understood to only address the functional spaces that are involved in the project.

\[
\begin{align*}
X & = \text{Requirement is met, for new space, for renovated space, or for existing direct support space for an expanded service.} \\
E & = \text{Requirement relative to an existing suite or area that has been licensed for its designated function, is not affected by the construction project and does not pertain to a required direct support space for the specific service affected by the project. “E” must not be used for an existing required support space associated with a new patient care room or area.} \\
W & = \text{Waiver requested for specific section of the Regulations or FGI Guidelines, where hardship in meeting requirement can be demonstrated (a Physical Plant Waiver Form must be completed for each waiver request). An explicit floor plan or plan detail must be attached to each waiver request.}
\end{align*}
\]

4. All room functions marked with “X” must be shown on the plans with the same name labels as in this checklist.
5. Mechanical, electrical & plumbing requirements are only partially mentioned in this checklist. The relevant section of the FGI Guidelines must be used for project compliance with all MEP requirements and for waiver references.
6. Oxygen, vacuum, medical air, waste anesthesia gas disposal and instrument air outlets (if required) are identified respectively by the abbreviations “OX”, “VAC”, “MA”, “WAGD” & “IA”.
7. Requirements referenced with “FI” result from formal interpretations from the FGI Interpretations Task Group.
8. The location requirements including asterisks (*) refer to the definitions of the Glossary in the beginning section of the FGI Guidelines and reproduced in this checklist.

Architectural Requirements

2.2-2.8

**NEONATAL INTENSIVE CARE UNIT**

2.1-1.2.3 Shared Services:
___ No combined functions unless specifically allowed in this checklist

2.2-2.8.1.2 Location:

(1) ___ all entries to NICU secured with controlled access by door locking or by direct or indirect visual observation

(2) ___ family entrance & reception area is clearly identified

(3) ___ reception area permits visual observation & contact with all traffic entering unit

(4) ___ NICU designed to protect physical security of infants, parents & staff & to minimize risk of infant abduction

2.2-2.8.2 NICU ROOMS & AREAS

2.2-2.8.2.2(1)(a) ___ Multiple-infant rooms (including those with bays, cubicles or movable cubicle partitions)
☐ check if not included in project

Space Requirements:

___ each infant care station contains min. clear floor area 120 sf per infant care bed

(2)(a) ___ aisle adjacent* to each infant care station with min. width 4’-0”

(2)(b) ___ fixed cubicle partitions
☐ check if not included in project

___ adjacent* aisle with min. clear width 8’-0” to permit passage of equipment & personnel

(3)(a) ___ min. clearance 8’-0” provided between infant care beds

(3)(b) ___ min. clearance 1 foot at head of infant care bed

___ min. clearance 4’-0” between sides of infant care beds & any wall or other fixed obstruction

2.2-2.8.2.5(1) Handwashing Stations:
___ every bed position located within 20’-0” of handwashing station

Building Systems Requirements

Ventilation:
___ Min. 4 air changes per hour Table 7.1

Lighting:
___ General lighting 2.1-8.3.4.3(1)

___ Lighting for NICU bed permits staff observation of patient
___ minimizes glare

Power:
___ Min. 16 receptacles in total convenient to head of bed Table 2.1-1 + Errata

Nurse Call System:
___ Staff assistance station for each bed Table 2.1-2

___ Emergency call station for each bed

Medical Gases:
___ 1 OX, 3 VAC, 3 MA per bed Table 2.1-3
Architectural Requirements

(1)(b)  Single-infant rooms

☐ check if not included in project

Space Requirements:

☐ min. clear floor area 165 sf

☐ min. clearance 1 foot at head of infant care bed

☐ min. clearance 4’-0” between sides of infant care beds & any wall or other fixed obstruction

Handwashing Stations:

☐ handwashing station provided in each room

(3)(b)  min. clearance 1 foot at head of infant care bed

Min. 4 air changes per hour

Lighting:

☐ General lighting

☐ Lighting for NICU bed

permits staff observation of patient

☐ minimizes glare

Power:

☐ Min. 16 receptacles in total

☐ convenient to head of bed

Nurse Call System:

☐ Patient station

☐ Staff assistance station

☐ Emergency call for each bed

Medical Gases:

☐ 1 OX, 3 VAC, 3 MA per bed

Building Systems Requirements

Ventilation:

☐ Min. 4 air changes per hour

Table 7.1

Lighting:

☐ General lighting

Table 2.1-8.3.4.3(1)

(c)

☐ Lighting for NICU bed

permits staff observation of patient

☐ minimizes glare

Power:

☐ Min. 16 receptacles in total

☐ convenient to head of bed

Table 2.1-1

Nurse Call System:

☐ Patient station

Table 2.1-2

☐ Staff assistance station

☐ Emergency call for each bed

Medical Gases:

☐ 1 OX, 3 VAC, 3 MA per bed

Table 2.1-3

2.2-2.8.2.3  Windows

☐ at least one source of daylight is visible from infant care areas

☐ exterior windows glazed with insulating glass to minimize heat gain or loss

☐ exterior windows are situated at least 2’-0” from any part of infant bed

☐ exterior windows are sized to minimize radiant heat loss from infant

☐ all daylight sources are equipped with shading devices

2.2-2.8.2.4  Each infant care station is designed to allow visual privacy for infant & family

2.2-2.8.4  SPECIAL PATIENT CARE ROOMS

2.2-2.8.4.2  Airborne infection isolation (AII) room

☐ provisions for observation of infant in AII room from adjacent areas of NICU

☐ complies with requirements applicable to NICU patient rooms

(1)  capacity one bed

(2)  personal protective equipment (PPE) storage at entrance to room

(3)  handwashing station

2.1-2.4.2.3  Anteroom

☐ check if not included in project

☐ provides space for persons to don personal protective equipment (PPE) before entering patient room

Ventilation:

☐ Min. 10 air changes per hour

Table 7.1

Exhaust

☐ No recirculating room units

Table 7.1
### Architectural Requirements

<table>
<thead>
<tr>
<th>Requirement</th>

</tbody>
</table>
Architectural Requirements

2.2-2.8.8.8  ____ Medication safety zones

2.1-2.8.8.1(2)  Design Promoting Safe Medication Use:

(a)  ____ medication safety zones located out of circulation paths

(b)  ____ work space designed so that staff can access information & perform required tasks

(c)  ____ work counters provide space to perform required tasks

(e)  ____ sharps containers placed at height that allows users to see top of container

(f)  ____ max. 45 dBA noise level caused by building systems

2.1-2.8.8.2(1)  ____ medication preparation room

(a)  ____ under visual control of nursing staff

(b)  ____ work counter

____ handwashing station

____ lockable refrigerator

____ locked storage for controlled drugs

____ sharps containers

☐ check if not included in project

(c)  ____ self-contained medication-dispensing unit

☐ check if not included in project

____ room designed with space to prepare medications

or

2.1-2.8.8.2(2)  ____ automated medication-dispensing unit

(a)  ____ located at nurse station, in clean workroom or in alcove

(c)  ____ handwashing station located next to stationary medication-dispensing units or stations

Building Systems Requirements

2.1-2.8.10  ____ Ice-making equipment

2.2-2.8.8.11  ____ Clean workroom or clean supply room

2.1-2.8.11.2  ____ clean workroom

____ used for preparing patient care items

(1)  ____ work counter

(2)  ____ handwashing station

(3)  ____ storage facilities for clean & sterile supplies

or

2.1-2.8.11.3  ____ clean supply room

____ used only for storage & holding as part of system for distribution of clean & sterile supplies

Ventilation:

____ Min. 4 air changes per hour  Table 7.1

____ Positive pressure

Lighting:

____ Task-specific lighting level  2.1-2.8.8.1(2)(d)

____ min. 100 foot-candles

Ventilation:

____ Min. 4 air changes per hour  Table 7.1

____ Positive pressure

Lighting:

____ Task lighting  2.1-2.8.8.1(2)(d)

Nurse Call System:

____ Duty station (light/sound signal)  Table 2.1-2

<tr>
<td>Emergency equipment storage</td>
<td>Each patient care unit has at least one emergency equipment storage location</td>
</tr>
<tr>
<td>(2)</td>
<td>Provided under visual observation of staff</td>
</tr>
<tr>
<td>(3)</td>
<td>Storage locations in corridors do not encroach on minimum required corridor width</td>
</tr>
</tbody>
</table>
### Architectural Requirements

**2.2-2.8.8.14**  
Environmental services room  
- [ ] not shared with other patient care units or departments  
- [ ] directly accessible* to NICU

**2.1-2.8.14.2**  
- [ ] service sink or floor-mounted mop sink  
- [ ] provisions for storage of supplies & housekeeping equipment  
- [ ] handwashing station  
  - or  
  - hand sanitation station

**2.2-2.8.8.15**  
Diagnostic Treatment & Service Areas:  
(provided in same building)  
- [ ] respiratory therapy  
- [ ] blood gas lab  
- [ ] developmental therapy  
- [ ] social work  
- [ ] laboratory services  
- [ ] pharmacy services  
- [ ] radiology services  
- [ ] other ancillary services

**2.2-2.8.8.16**  
Lactation support space  
- [ ] immediately accessible* to NICU for lactation support & consultation  
- [ ] handwashing station  
  - counter  
- (2)(a)  
  - refrigeration & freezing  
  - immediately accessible* to NICU  
- (2)(b)  
  - storage for pump & attachments & educational materials  
  - immediately accessible* to NICU

**2.2-2.8.8.17**  
Infant feeding preparation facilities  
- [ ] space for preparation & storage of formula & additives to human milk & formula provided in unit or other location away from patient bedside  
- (1)(b)  
  - work area & equipment layout designed to provide for flow of materials from clean to soiled to maintain aseptic preparation space  
- (2)  
  - infant feedings prepared on-site  
  - ☐ check if not included in project  
  - (a)  
  - feeding preparation room with following spaces:  
    - [ ] anteroom or anteroom area  
    - [ ] preparation area  
    - [ ] Storage space  
    - [ ] Cleanup area

### Building Systems Requirements

**Ventilation:**  
- [ ] Min. 10 air changes per hour  
- [ ] Exhaust  
- [ ] Negative pressure  
- [ ] No recirculating room units

</table>
**Architectural Requirements**

2.2-2.8.10.2  Parent/infant room

(3) ☐ check if not included in project

(only if all NICU rooms are single-infant rooms)

☐ provided in NICU that allows parents & infants extended private time together

(1)(b) ☐ communication linkage with NICU staff

(1)(d) ☐ sleeping facilities for at least one parent

(1)(e) ☐ sufficient space for infant’s bed & equipment

---

**Building Systems Requirements**

**Ventilation:**

☐ Min. 4 air changes per hour Table 7.1

**Lighting:**

☐ General lighting

☐ Lighting for NICU bed

☐ permits staff observation of patient

☐ minimizes glare

**Power:**

☐ Min. 16 receptacles in total Table 2.1-1

☐ convenient to head of bed

**Nurse Call System:**

☐ Patient station Table 2.1-2

☐ Staff assistance station

☐ Emergency call for each bed

**Medical Gases:**

☐ 1 OX, 3 VAC, 3 MA per bed Table 2.1-3

---

(1)(a) ☐ direct private access to sink, shower & toilet facilities

---

**SPECIAL DESIGN ELEMENTS**

2.2-2.8.7  Architectural Details:

(1)(a) ☐ ceilings easily cleanable & non-friable

(1)(b) ☐ ceiling construction limit passage of particles from above ceiling plane into clinical environment

(2) ☐ wall sound isolation complies with Table 1.2-6

(3) ☐ floor sound isolation complies with Table 1.2-6

2.2-2.8.7.2  Lighting:

(1) ☐ indirect lighting & high-intensity lighting in NICU

(2) ☐ color rendering index min. 80

☐ full-spectrum color index min. 55

☐ gamut area of no less than 65 & no greater than 100

(3) ☐ controls be provided to enable lighting to be adjusted over individual patient care spaces

(4) ☐ darkening for body transillumination is available

(5)(a) ☐ no direct ambient lighting in infant care station

---

**Ventilation:**

☐ Min. 10 air changes per hour Table 7.1

**Exhaust**

☐ Negative pressure

☐ No recirculating room units

---

**Ventilation:**

☐ Min. 10 air changes per hour Table 7.1

**Exhaust**

☐ Negative pressure

☐ No recirculating room units
### Architectural Requirements

| (5)(b) | any direct ambient lighting outside infant care station is located or framed to avoid direct line of sight from infant to fixture |
| (6) | lighting fixtures are cleanable |

### Building Systems Requirements

<table>
<thead>
<tr>
<th>2.2-2.8.7.3</th>
<th>Noise Control:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>infant rooms, staff work areas, family areas, staff lounge &amp; sleeping areas meet room noise criteria in Table 1.2-5</td>
</tr>
</tbody>
</table>

*LOCATION TERMINOLOGY:

- **Directly accessible:** Connected to the identified area or room through a doorway, pass-through, or other opening without going through an intervening room or public space
- **Adjacent:** Located next to but not necessarily connected to the identified area or room
- **Immediately accessible:** Available either in or adjacent to the identified area or room
- **Readily accessible:** Available on the same floor or in the same clinic as the identified area or room

</table>
2.1-7.2.2.8 HANDWASHING STATIONS:

(1)(c) Handwashing stations in patient care areas located so they are visible & unobstructed

(3) Handwashing station countertops made of porcelain, stainless steel, solid-surface materials or impervious plastic laminate assembly

(5) Handwashing station casework designed to prevent storage beneath sink

(6) Liquid or foam soap dispensers

2.1-7.2.12 NOISE CONTROL:

(1) Recreation rooms, exercise rooms equipment rooms & similar spaces where impact noises may be generated are not located directly over patient bed areas or Special provisions are made to minimize impact noise

(2) Noise reduction criteria in Table 1.2-6 applicable to partitions, floors & ceiling construction are met in patient areas

2.1-7.2.14 DECORATIVE WATER FEATURES:

(1) No indoor unsealed water features

(2) Covered fish tanks check if not included in project restricted to public areas

2.1-7.2.3 SURFACES

2.1-7.2.3.1 FLOORING & WALL BASES:

(1) Flooring surfaces cleanable & wear-resistant for location

(3) Smooth transitions provided between different flooring materials

(4) Flooring surfaces including those on stairways are stable, firm & slip-resistant

(5) Floors & wall bases of soiled workrooms, toilet rooms & other areas subject to frequent wet cleaning are constructed of materials that are not physically affected by germicidal or other types of cleaning solutions

2.1-7.2.3.2 WALLS & WALL PROTECTION:

(1)(a) Wall finishes are washable

(1)(b) Wall finishes near plumbing fixtures are smooth, scrubbable & water-resistant

(2) Wall surfaces in areas routinely subjected to wet spray or splatter (e.g. environmental services rooms) are monolithic or have sealed seams that are tight & smooth

(5) Wall protection devices & corner guards durable & scrubbable

2.1-7.2.3.3 CEILINGS:

(1) Ceilings provided in all areas except mechanical, electrical & communications equipment rooms

(a) Ceilings cleanable with routine housekeeping equipment

(b) Acoustic & lay-in ceilings where used do not create ledges or crevices

2.1-7.2.4 FURNISHINGS:

2.1-7.2.4.1 Built-In Furnishings:

☐ check if not included in project upholstered with impervious materials in patient treatment areas

2.1-7.2.4.3 Privacy curtains in patient rooms & other patient care areas are washable check if not included in project

2.1-8.2 HEATING VENTILATION & AIR-CONDITIONING (HVAC) SYSTEMS

UTILITIES:

Part 3/6.1

Part 3/6.1.1 Ventilation Upon Loss of Electrical Power:

☐ space ventilation & pressure relationship requirements of Tables 7.1 are maintained for AII Rooms, PE Rooms in event of loss of normal electrical power

Part 3/6.1.2 Heating & Cooling Sources:

☐ heat sources sufficient to accommodate facility needs (reserve capacity) even when any one of heat sources or essential accessories is not operating due to breakdown or routine maintenance
Part 3/6.1.2.2  Central cooling systems greater than 400 tons (1407 kW) peak cooling load
☐ check if not included in project
☐ cooling sources sufficient to support owner's facility operation plan upon breakdown or routine maintenance of any one of cooling sources

Part 3/6.2  AIR-HANLDING UNIT (AHU) DESIGN:
Part 3/6.2.1  AHU casing is designed to prevent water intrusion, resist corrosion & permit access for inspection & maintenance

Part 3/6.3  OUTDOOR AIR INTAKES & EXHAUST DISCHARGES:
Part 3/6.3.1  Outdoor Air Intakes:
Part 3/6.3.1.1  located min. of 25 ft from cooling towers & all exhaust & vent discharges
☐ air intakes located away from public access
☐ intakes on top of buildings
☐ check if not included in project
☐ located with bottom of air intake min. 3'-0" above roof level
☐ intake in areaway
☐ check if not included in project
☐ bottom of areaway air intake opening is at least 6'-0" above grade
☐ bottom of air intake opening from areaway into building is at least 3'-0" above bottom of areaway

Part 3/6.3.2  Exhaust Discharges for Infectious Exhaust Air:
☐ check if not included in project
☐ ductwork within building is under negative pressure for exhaust of contaminated air (i.e. air from AII rooms)

Part 3/6.4  FILTRATION:
☐ Two filter banks for inpatient care (see Table 6.4)
☐ Filter Bank No. 1: MERV 7
☐ Filter Bank No. 2: MERV 14
☐ Each filter bank with efficiency of greater than MERV 12 is provided with differential pressure measuring device to indicate when filter needs to be changed

Part 3/6.5  HEATING & COOLING SYSTEMS:
Part 3/6.5.3  Radiant heating systems
☐ check if not included in project
☐ ceiling or wall panels with exposed cleanable surfaces or radiant floor heating are provided in AII room, PE room & burn unit

Part 3/6.7  AIR DISTRIBUTION SYSTEMS:
Part 3/6.7.1  pressure relationships required in tables 7.1 maintained in all modes of HVAC system operation
☐ Spaces that have required pressure relationships are served by fully ducted return systems or fully ducted exhaust systems
☐ Inpatient facilities are served by fully ducted return or exhaust systems

Part 3/6.7.2  Air Distribution Devices:
☐ supply air outlets comply with Table 6.7.2

Part 3/6.7.3  Smoke Barriers:
☐ HVAC zones coordinated with compartmentation to minimize ductwork penetrations of fire & smoke barriers.
Part 3/6.8  ENERGY RECOVERY SYSTEMS:
☐ check if not included in project
Part 3/6.8.1  Located upstream of Filter Bank No. 2
Part 3/6.8.2  AII room exhaust systems or combination AII/PE rooms are not used for energy recovery

Part 3/6.8.3  Energy recovery systems with leakage potential
☐ check if not included in project
arranged to minimize potential to transfer exhaust air directly back into supply airstream
☐ designed to have no more than 5% of total supply airstream consisting of exhaust air

Part 3/7  SPACE VENTILATION
Part 3/7.1.a  Spaces ventilated according to Table 7.1
Part 3/7.1.a.1  Air movement is from clean to less-clean areas

Part 3/7.1.a.3  Min. number of total air changes required for positive pressure rooms is provided by total supply airflow
☑ Min. number of total air changes required for negative pressure rooms is provided by total exhaust airflow

Part 3/7.1a.5  Air recirculation through room unit
☐ check if not included in project
☑ complies with Table 7.1
☐ room unit receive filtered & conditioned outdoor air
☐ serve only a single space
☐ provides min. MERV 6 filter located upstream of any cold surface so that all of air passing over cold surface is filtered

Part 3/7.2  ADDITIONAL ROOM-SPECIFIC REQUIREMENTS:
Part 3/7.2.1  Airborne Infection Isolation (AII) Rooms
☐ check if not included in project
☑ AII rooms have permanently installed device and/or mechanism to constantly monitor differential air pressure between room & corridor
☑ Local visual means is provided to indicate whenever negative differential pressure is not maintained
☐ Air from AII room is exhausted directly to outdoors

Part 3/7.2.2  Protective Environment (PE) Rooms
☐ check if not included in project
☑ Supply air diffusers are located above patient bed
☑ Exhaust grilles or registers are located near patient room door.
☑ PE rooms have permanently installed device to constantly monitor differential air pressure between room & corridor local
☑ Visual means is provided to indicate whenever positive differential pressure is not maintained

Part 3/7.2.3  Combination Airborne Infectious Isolation/Protective Environment Room (AII/PE)
☐ check if not included in project
☑ Supply air diffusers are located above patient bed
☑ Exhaust grilles or registers are located near patient room door.
☑ Anteroom
☐ check if not included in project
☐ anteroom is at positive pressure with respect to both AII/PE room & corridor or common space
☐ anteroom is at negative pressure with respect to both AII/PE room & corridor or common space
☐ First device monitors pressure differential between AII/PE room & anteroom
☐ Second device monitors pressure differential between anteroom & corridor or common space
☐ Local visual means are provided to indicate whenever differential pressures are not maintained

---

Exhaust air from AII rooms, associated anterooms & toilet rooms is discharged directly to outdoors without mixing with exhaust air from any other non-AII room or exhaust system

Exhaust air grille or register in patient room is located directly above patient bed on ceiling or on wall near head of bed

Anteroom
☐ check if not included in project
☑ AII room is at negative pressure with respect to anteroom
☑ Anteroom is at negative pressure with respect to corridor

Protective Environment (PE) Rooms
☐ check if not included in project
☑ Supply air diffusers are located above patient bed
☑ Exhaust grilles or registers are located near patient room door.
☑ PE rooms have permanently installed device to constantly monitor differential air pressure between room & corridor local
☑ Visual means is provided to indicate whenever positive differential pressure is not maintained

Combination Airborne Infectious Isolation/Protective Environment Room (AII/PE)
☐ check if not included in project
☑ Supply air diffusers are located above patient bed
☑ Exhaust grilles or registers are located near patient room door.
☑ Anteroom
☐ check if not included in project
☐ anteroom is at positive pressure with respect to both AII/PE room & corridor or common space
☐ anteroom is at negative pressure with respect to both AII/PE room & corridor or common space
☑ First device monitors pressure differential between AII/PE room & anteroom
☑ Second device monitors pressure differential between anteroom & corridor or common space
☑ Local visual means are provided to indicate whenever differential pressures are not maintained
2.1-8.3 ELECTRICAL SYSTEMS
2.1-8.3.2.2 Panelboards:
   (1) panelboards serving life safety branch circuits serve floors on which they are located & floors immediately above & below
   (2) panelboard critical branch circuits serve floors on which they are located
   (3) panelboards not located in exit enclosures or exit passageways

2.1-8.3.2.3 Ground-Fault Circuit Interrupters in Critical Care Areas:
   ☐ check if not included in project
   (2) each receptacle individually protected by single GFCI device

2.1-8.3.3 POWER-GENERATING & -STORING EQUIPMENT
2.1-8.3.3.1 Essential electrical system or emergency electrical power
   (1) essential electrical system complies with NFPA 99
   (2) emergency electrical power complies with NFPA 99

2.1-8.3.4 LIGHTING:
2.1-8.3.4.3(2) Patient care unit corridors have general illumination with provisions for reducing light levels at night

2.1-8.3.5 ELECTRICAL EQUIPMENT:
2.1-8.3.5.1 Handwashing sinks & scrub sinks that depends on building electrical service for operation are connected to essential electrical system
   ☐ check if not included in project

2.1-8.3.6 ELECTRICAL RECEPTACLES:
2.1-8.3.6.1 Receptacles In Corridors:
   (1) duplex-grounded receptacles for general use installed 50'-0" apart or less in all corridors
   (2) duplex-grounded receptacles for general use installed within 25'-0" of corridor ends

2.1-8.3.6.3 Essential Electrical System Receptacles:
   (1) cover plates for electrical receptacles supplied from essential electrical system are distinctively colored or marked for identification
   (2) same color is used throughout facility

2.1-8.4 PLUMBING SYSTEMS
2.1-8.4.2 Plumbing & Other Piping Systems:
2.1-8.4.2.1(3) no plumbing piping exposed overhead or on walls where possible accumulation of dust or soil may create cleaning problems

2.1-8.4.2.2 Hemodialysis/Hemoperfusion Water Distribution:
   ☐ check if not included in project
   (1)(a) separate treated water distribution system
   (2)(b) outlet at each individual hemodialysis treatment bay
   (2) outlet at hemodialysis equipment repair area
   (3) outlet at dialysate preparation area
   or
   (1)(b) dialysis equipment includes sufficient water treatment provisions for use of domestic cold water
   (4) liquid waste & disposal system for hemodialysis treatment area are designed to minimize odor & prevent backflow
   (5) hemodialysis distribution piping is readily accessible* for inspection & maintenance

2.1-8.4.2.5 Heated Potable Water Distribution Systems:
   (2) heated potable water distribution systems serving patient care areas are under constant recirculation
   (3)(a) non-recirculated fixture branch piping max. length 25'-0"
   (3)(b) any existing dead-end piping is removed
   ☐ check if not included in project
   (4)(a) water-heating system supplies water at temperatures & amounts indicated in Table 2.1-4

2.1-8.4.2.6 Drainage Systems:
   (1)(a) drainage piping installed above ceiling of or exposed in electronic data processing areas & electric closets
   ☐ check if not included in project
   (4) special provisions to protect space below from leakage & condensation
2.1-8.4.3 PLUMBING FIXTURES:
2.1-8.4.3.1(1) Materials used for plumbing fixtures are non-absorptive & acid-resistant

2.1-8.4.3.2 Handwashing Station Sinks:
(1) designed with basins that will reduce risk of splashing to areas for direct patient care & medication preparation
(2) sink basins have nominal size of no less than 144 square inches
(3) sink basins have min. dimension 9 inches in width or length
(5) sink basins are made of porcelain, stainless steel or solid-surface materials
(7) faucet water discharge point min. 10" above bottom of basin
(8) sink basins have min. dimension 9 inches in width or length

2.1-8.4.3.4 Ice-Making Equipment:
____ copper tubing provided for supply connections to ice-making equipment

2.1-8.4.3.5 Clinical Flushing-Rim Sinks:
☐ check if not included in project

2.1-8.4.3.7 Bedpan-Rinsing Devices:
(1) bedpan-rinsing devices provided in each inpatient toilet room
(2) use cold water only

2.1-8.4.4 MEDICAL GAS & VACUUM SYSTEMS
____ Station outlets provided as indicated in Table 2.1-3

2.1-8.5.1 CALL SYSTEMS
2.1-8.5.1.1 Nurse call stations provided as required in Table 2.1-2
(2) Nurse call systems report to attended location with electronically supervised visual & audible annunciation as indicated in Table 2.1-2
(4) Call system complies with UL 1069 “Standard for Hospital Signaling & Nurse Call Equipment”
(5) Wireless nurse call system
☐ check if not included in project
____ complies with UL 1069

2.1-8.5.1.2 Patient Call Stations:
(2)(b) reset switch for canceling call
(3)(a) visible signal in corridor at patient’s door
Multi-Corridor Patient Areas:
☐ check if not included in project
____ additional visible signals at corridor intersections

2.1-8.5.1.5 Emergency call stations are equipped with continuous audible or visual confirmation to person who initiated the code call

2.1-8.6.2 ELECTRONIC SURVEILLANCE SYSTEMS
☐ check if not included in project

2.1-8.6.2.2 Monitoring devices are located so they are not readily observable by general public or patients
2.1-8.6.2.3 Electronic surveillance systems receive power from essential electrical system
