MASS.GOV/MASSWILDLIFE

PUBLIC HEARING NOTICE 321 CMR 10.90 & 10.91

In accordance with the Massachusetts General Laws, Chapter 131A, Section 4 and Chapter 30A, Section 2, NOTICE is hereby given of a public hearing to be held on Wednesday, August 28, 2019, at 1:00 p.m., at the Division of Fisheries and Wildlife's Field Headquarters, Richard Cronin Building, 1 Rabbit Hill Road, off North Drive, Westborough, Massachusetts, to amend the list of species of animals and plants protected by the Massachusetts Endangered Species Act.

A handwritten signature in black ink that reads "Mark S. Tisa".

Mark S. Tisa, Ph.D., M.B.A.
Director

MASSWILDLIFE

321 CMR: DIVISION OF FISHERIES AND WILDLIFE

PART V: LISTS, DESIGNATED SIGNIFICANT HABITATS

10.90: List of Endangered, Threatened, and Special Concern Species

(1) Introduction. The list in 321 CMR 10.90 contains the names of all species of plants and animals which have been determined to be Endangered, Threatened, or of Special Concern pursuant to M.G.L. c. 131A and 321 CMR 10.03.

(2) List Format. The columns entitled "Common Name" and "Scientific Name" define the species listed. In the "Status" columns the following symbols are used: "E" for Endangered, "T" for Threatened, and "SC" for Special Concern. The status defined under the "MA" column denotes the official status of the species in Massachusetts pursuant to M.G.L. c.131A and 321 CMR 10.00. The status under the "US" column is the status of the species under the federal Endangered Species Act at the time of the latest revision of 321 CMR 10.00 and is given for informational purposes only. Recent changes in the federal list might not be reflected in 321 CMR 10.90. The U.S. Fish and Wildlife Service should be consulted for official and up to date information on the federal status of any species. Inquiries may be made by writing to U.S. Fish and Wildlife Service, 70 Commercial Street, Suite 300, Concord, NH 03301-5087. The "Taxonomic Group" column of the list is included for the purpose of organization. The "Notes" column directs the reader to footnotes which further define or clarify the status of a species or alternative names of species.

(3) Organization of the List. The list is generally organized according to the relationship of the listed species as determined by the science of taxonomy, which groups and categorizes species that are similar on the basis of shared evolutionary descent. The most basic division in the list is between animals and plants. Within animals the list is divided between vertebrates (animals with backbones) and invertebrates (animals without backbones). Within vertebrates and invertebrates, the list is further divided into categories which are generally recognized, such as fish, mammals, and dragonflies. All such information has no regulatory effect and is provided only for the purpose of organizing the list. The following outline shows the taxonomic categories used and their order.

321 CMR: DIVISION OF FISHERIES AND WILDLIFE

321 CMR: DIVISION OF FISHERIES AND WILDLIFE

REGULATORY AUTHORITY

321 CMR 10.00: M.G.L. c. 131A.

E = Endangered, T = Threatened, SC = Special Concern

321 CMR: DIVISION OF FISHERIES AND WILDLIFE

PART V: LISTS, DESIGNATED SIGNIFICANT HABITATS

10.90: List of Endangered, Threatened, and Special Concern Species

(1) Introduction. The list in 321 CMR 10.90 contains the names of all species of plants and animals which have been determined to be Endangered, Threatened, or of Special Concern pursuant to M.G.L. c. 131A and 321 CMR 10.03.

(2) List Format. The columns entitled "Common Name" and "Scientific Name" define the species listed. In the "Status" columns the following symbols are used: "E" for Endangered, "T" for Threatened, and "SC" for Special Concern. The status defined under the "MA" column denotes the official status of the species in Massachusetts pursuant to M.G.L. c.131A and 321 CMR 10.00. The status under the "US" column is the status of the species under the federal Endangered Species Act at the time of the latest revision of 321 CMR 10.00 and is given for informational purposes only. Recent changes in the federal list might not be reflected in 321 CMR 10.90. The U.S. Fish and Wildlife Service should be consulted for official and up to date information on the federal status of any species. Inquiries may be made by writing to U.S. Fish and Wildlife Service, 70 Commercial Street, Suite 300, Concord, NH 03301-5087. The "~~Taxonomic Family/~~ Taxonomic Group" column of the list is included for the purpose of organization. The "Notes" column directs the reader to footnotes which further define or clarify the status of a species or alternative names of species.

(3) Organization of the List. The list is generally organized according to the relationship of the listed species as determined by the science of taxonomy, which groups and categorizes species that are similar on the basis of shared evolutionary descent. The most basic division in the list is between animals and plants. Within animals the list is divided between vertebrates (animals with backbones) and invertebrates (animals without backbones). Within vertebrates, ~~and~~ and invertebrates, ~~and plants~~ the list is further divided into categories which are generally recognized, such as fish, mammals, and dragonflies, ~~and violets~~. All such information has no regulatory effect and is provided only for the purpose of organizing the list. The following outline shows the taxonomic categories used and their order. ~~A species name index is provided after the list at 321 CMR 10.91 to assist the reader in finding species on the list.~~

10.91: Index to State Listed Species

The following index is intended to help users of the state list of Endangered, Threatened, and Special Concern species determine the official status of any species listed under MESA. This is particularly important for users of the list who are not familiar with the scientific names of species. Starting with only a common or scientific name, the index tells the user where to find the species on the list. The index accomplishes this by specifying the name of the animal group or plant family under which the species will be found.

For example, to find the status of *Acipenser brevirostrum*, one would look up "Acipenser" in the index and find that it is a fish. Where fish occur in the list is specified by the outline appearing just before the list at 321 CMR 10.90(3). The outline shows that fish is the first category of vertebrate animals. By looking for "*Acipenser brevirostrum*" in that section of the list one would determine that it is the "Shortnose Sturgeon" and is listed as an Endangered species on both the state and federal lists.

Note that all plants are found under plant families which end with "aceae" and that animals are listed under commonly known categories, such as birds, mammals, or butterflies.
