**Division of Water Supply Protection, Office of Watershed Management**  
***Forest Management Project Summary***

**Project Title:**

<b>DWSP Harvest Permit Number: 5304</b>
<b>DCR Forest Cutting Plan File Number:</b>

**Site Information**

<b>Watershed: Wachusett</b>	<b>Town(s): Sterling</b>
<b>Acres: 97.8</b>	<b>Nearest Road: Rt. 140 (Redemption Rock Trail)</b>
<b>Natural Heritage Atlas overlap?: None</b>	<b>Public Drinking Water Supply Watershed?: Yes</b>
<b>Forest Types: White pine/hemlock, oak/hardwood, Northern red oak</b>	<b>ACEC?: No</b>
<b>Soils: Paxton and Canton fine sandy loam and Woodbridge fine sandy loam</b>	
<b>Wetland Resources: Justice Brook and its narrow bordering vegetated wetland forms the western side of this sale area. There are several very small intermittent streams in the northern end of this area that flow westerly, joining Justice Brook.</b>	
<b>Vernal Pools: There are three verified vernal pools and one potential vernal pool present. These are along the toe of the west-facing slope.</b>	

**Harvest Information**

<b>DWSP Permit Start Date: 11/29/2022</b>	<b>DWSP Permit End Date: 12/12/2024</b>
<b>Number of Wetland Crossings: One</b>	<b>Number of Stream Crossings: One</b>

**Best Management Practices Applied**

<b>Stream Crossings</b>	This small stream will be bridged if it is possible given the excessive rockiness of the site. Otherwise it will be protected with corduroy and tree tops as appropriate.
<b>Filter Strips</b>	No cutting will occur within any of the filter strips.
<b>Wetland Crossings</b>	An adequate amount of corduroy or swamp mats will be utilized.
<b>Harvesting in Wetlands</b>	No cutting will occur within wetlands.

<b>DWSP Forester supervising this harvest</b>
<b>Name: Greg Buzzell</b>
<b>Forester License #: 025</b>
<b>Phone #: 774-261-1841</b>

## **NARRATIVES**

### **General Description/Forest Composition/History:**

The forest on this west facing hillside above Justice Brook originated in the 1920's and 30's, presumably following pasture abandonment. The dominant species are white pine, red oak, black oak, white oak, hemlock and red maple. Most of the hemlock is in a mid-story position and it is infested with hemlock wooly adelgid. There are also scattered paper birch and bigtooth aspen. Along the intermittent streams and in the wet benches common in this area, white ash, sugar maple and yellow birch are found. A few blackgum are present in a seepy area in the southern end and basswood is present near Justice Brook. Beech is found in scattered pockets particularly in the southern half of the area. The understory is dominated by mountain laurel in the southern end of the area while witch-hazel is more common in the north. There limited understory in the white pine-hemlock stand on the top of the hill in the southeast portion of this area. With white pine in the overstory and a mid-story dominated by hemlock, this area was a heavily used winter deer yard for many years. This no longer seems to be the case...perhaps the thinning of the hemlock foliage by hemlock wooly adelgid is the cause.

This timber sale also includes the remnants of Lot 5254. The western half of Lot 5254 was operated from 2017 to 2019. There are 11 overstory openings in the eastern half that were not harvested. These have been remarked and included in this timber sale operation.

There is evidence of logging (e.g. old stumps and basal wounds) that took place roughly 30 years ago prior to MDC acquisition which occurred in 1997. The age structure is as follows; 0%, 0-20 years old; 0%, 21-40 years; 0%, 41-60 years; 0%, 61-80 years; 99%, 81-100 years and 1%, >100 years old.

### **Site Selection:**

The ideal watershed protection forest is one which best serves the function of the land as a producer of high quality drinking water in both short- and long-term. This forest must be vigorous and diverse in tree species and ages, be actively accumulating biomass and actively regenerating. Such a forest will be ideally suited to be resilient to and quickly recover from small- and large-scale disturbances such as diseases, insect infestations, ice storms and hurricanes.

### **Silvicultural Objectives:**

The remnants of Lot 5254 covers 24 acre. There are 11 openings totaling 7.9 acres, ranging in size from 0.2 to 2 acres. The main focus of this operation is on the 73.8 acres that was the former Baker parcel. Where adequate advance regeneration exists, openings will be made in the overstory to give it the light and space it needs to continue to grow and thereby create a new age cohort in this even-aged forest. This will occur in 5 openings on a combined 5.4 acres. These range in size from 0.5 to 1.4 acres in size. Given the soils, this site is well suited to growing hardwoods and so it is anticipated that hardwoods will comprise the majority of the new regeneration just as is comprises the majority of the advance regeneration. Partial overstory removal will occur in 4 areas on a combined 8.9 acres. The objective in these areas is to encourage the establishment of regeneration and to favor sugar maple where it is growing beneath taller and older oaks.

### **Cultural Resources:**

This project was reviewed by the DCR Archeologist. Any cultural resource features located before or during the forestry project will be protected according to guidelines set forth in the current DWSP's Land Management Program and indicated on harvest maps accordingly.

### **Wildlife/Rare or Endangered Species:**

No unusual wildlife sightings were recorded when the site was visited in May of 2021. Stick nests were noted in a few locations. The nests appear to be inactive, however some raptor species often return to the same area to breed. Broad-winged hawks were heard calling overhead during the visit, and a northern goshawk was confirmed nesting in this general area several years ago. Any trees with newer or active raptor nests will be retained.

The verified and potential vernal pools will all be protected and treated according to DWSPs Conservation Management Practices.

Landowner

**Landowner Signature**

The most important information on a cutting plan is the Landowner's objective, as this will determine which trees will be harvested and which will remain; this decision will also determine the future condition of the forest for decades to come. After having read the Massachusetts Forest Cutting Plan Information Sheet on page one, indicate your objective by checking the appropriate box below.

**LT - Long-term Forest Management**  
 Planned management of the forest to achieve one or more of the following objectives: produce immediate and maximize long-term income, enhance wildlife habitat, improve recreational opportunities, protect soil and water quality, or produce forest specialty products.

**ST - Short-term Harvest**  
 Harvest of trees with the main intention of producing short-term income with minimal consideration given to improving the future forest condition, which often results in a forest dominated by poor quality and low value species.

I (we) have read the Massachusetts Cutting Plan Information Sheet, and am aware of my (our) management options.  
 I (we) hereby certify that I (we) have the legal authority to carry out the operation described above.

I (we) certify that I (we) have notified the Conservation Commission in the town in which the operation is to take place and the abutters of record within two hundred feet of the area to be harvested.

I (we) understand that the volumes and values (Ch61 only) in this plan have not been independently verified by the service forester upon approval and will report final values and volumes to the Director or his/her agent if the final figures differ from those reported.

# Forest Cutting Plan

## Narrative Page

Use only if further explanation is required of information on pages one or two or if "other" was used in any category.

Landowner: DCR/DWSP

Town: Sterling

File Number: 282-36139-23

<b>BMPs</b>	<p><u>SC-1 is a very rock site. If it is not possible to install a timber bridge or swamp mats, the crossing will be protected with corduroy and tops as appropriate.</u></p> <p><u>WC-1 is on a haul road that was previously used during the operation of our Lot 5254 (CP #282-7612-15). The wood that was used to corduroy it is still in place. However, it will need to be adjusted and augmented.</u></p> <p><u>No cutting will occur in any of the 7 variable-width filters strips (there is only space on the form for 4).</u></p>
<b>Silviculture</b>	<p><u>In order to release advance regeneration, 16 openings in the overstory are being created, covering 13.4 acres. These openings range from 0.18 acre to 2 acres in size with an average of 0.84 acres. They are well distributed throughout the area taking advantage of the advance regeneration comprised of white pine, oaks, and other hardwoods.</u></p> <p><u>Partial removal of the overstory will occur in 4 locations covering a combined 8.9 acres. The goal in these areas is primarily to encourage the establishment of regeneration along with the encouragement of sugar maple in the most northern partial-cut patch.</u></p>
<b>Object</b>	<p><u>The objective of this operation is to diversify the age structure of the forest by removing the overstory in patches thereby releasing the advance regeneration. The current age structure is limited with an insufficient component of young forest.</u></p>
<b>Other</b>	<p><u>All haul roads as shown on the map have been flanged and/or marked with vertical stripes of paint.</u></p> <p><u>The eleven openings in the southern part of the sale area were part of the previously mentioned Lot 5254 (CP# 282-7612-15). These did not get cut back in 2017/2018.</u></p>
